PREFACE

The 1959 edition of the Canada Year Book continues a series of annual publications giving official statistical and other information on almost every measurable phase of Canada's development. As the economy of the country has expanded, the Dominion Bureau of Statistics has extended its program of statistical compilation and analysis and the Canada Year Book has endeavoured to present the story of this development, summarizing a great mass of detailed statistical information concisely within the covers of one volume and supplementing it with data from other Departments of the Federal Government and from the provinces.

Special feature articles are presented in each edition of the Year Book. Those in the current issue include: "The Atlas of Canada" (pp. 12-13); "The Climate of Canada" (pp. 23-50); "The International Geophysical Year" (pp. 54-57); "Integration of Postwar Immigrants" (pp. 176-178); "Canada's Mineral Industry 1957-58" (pp. 488-509); "The Fisheries Research Board" (pp. 584-588); "Steel in Canada" (pp. 618-625); and "A History of Canadian Journalism 1900 to 1958" (pp. 883-902).

In addition, other features have been introduced and extensive revisions made in the textual and statistical material of the various chapters, including such subjects as immigration, vital statistics, public health and welfare, scientific, medical and industrial research, forestry, power development, mineral production, manufacturing, the labour force, prices, public finance, banking, insurance, transportation and communication by various media, the domestic marketing of commodities, foreign trade, national income and expenditure and Canada's international investment position. Numerous charts graphically portray significant trends in the developing Canadian economy, while the Introduction (pp. ix-xv) describes briefly the state of the economy during 1958-59.

The concluding chapter, entitled "Sources of Official Information and Miscellaneous Data", presents handy reference material listing government information services, special material published in earlier Year Books, federal legislation of recent sessions of Parliament, a Canadian chronology of events, a register of official appointments, and a statistical summary of the progress of Canada since 1871.

In the Appendix certain material on Government (Chapter II) is brought up to the date of going to press, including recent election results in the provinces and changes in the Eighteenth Ministry of Canada.

Enclosed in the pocket on the inside back cover of the volume is a detailed map depicting the principal mineral areas of Canada.

The present volume has been produced in the Canada Year Book Section of the Information Services Division by Miss M. Pink, Assistant Editor of the Year Book and Chief of the Section, with the assistance of Miss F. L. O'Malley, Miss C. Freeth and the Year Book staff, under the editorship and direction of Dr. C. C. Lingard, Director of the Division. Charts, graphs and maps have been prepared for publication by Miss P. Beland and the Drafting Unit of the Bureau.

The co-operation of numerous officials of the various Departments of the Federal and Provincial Governments and of this Bureau in the preparation of material for the Year Book is gratefully acknowledged. Credit by means of footnotes is given where possible either to the persons or to the branches of the public service concerned.

WEIGHTS AND MEASURES AND OTHER INTERPRETATIVE DATA

In Canada as a rule the Imperial system of weights and measures is followed. An exception however is the ton where, unless otherwise stated, the short ton of 2,000 lb. is meant. Billion where used represents 1,000 million.

The following table shows the weights and measures used in Canada in connection with the principal field crops and for wheat flour and fruits:—

	<i>Pounds per Bushel</i>		<i>Pounds</i>
Grains—		Fruits (standard conversions)—	
Wheat.....	60	Apples, per barrel.....	135
Oats.....	34	Apples, per box.....	43
Barley.....	48	Pears, per bushel.....	50
Rye.....	56	Plums “ “.....	50
Buckwheat.....	48	Cherries “ “.....	50
Flaxseed.....	56	Peaches “ “.....	50
Corn.....	56	Grapes “ “.....	50
Mixed grains.....	50	Pears, per box.....	42
All others.....	60	Strawberries, per quart.....	1.25
		Raspberries “ “.....	1.25
		Loganberries “ “.....	1.25

Wheat Flour—

1 barrel equals 196 pounds; approximately 4.5 bushels of wheat are used in the production of a barrel of flour.

Relative Weights and Measures, Imperial and United States

The following list of coefficients may be used to translate amounts expressed in one unit to the other. It must be borne in mind that where the list below refers to Imperial pint, quart and gallon, their equivalent in ounces is also in Imperial measure; likewise United States designations for these quantities are shown in the U.S. equivalent in ounces. The Imperial (or British) fluid ounce and the U.S. fluid ounce are different measures. One Imperial fluid ounce equals 0.96 United States fluid ounce and one Imperial gallon equals 1.2 United States gallon.

1 Imperial pint=20 fluid ounces.	1 Imperial proof gallon=1.36 United States proof gallon.
1 United States pint=16 fluid ounces.	1 Short ton=2,000 pounds.
1 Imperial quart=40 fluid ounces.	1 Long ton=2,240 pounds.
1 United States quart=32 fluid ounces.	1 Barrel crude petroleum=35 Imperial gallons.
1 Imperial gallon=160 fluid ounces.	
1 United States gallon=128 fluid ounces.	

Fiscal Years of Federal and Provincial Governments

The fiscal year of the Federal Government and of each of the ten Provincial Governments ends on March 31.

Throughout the Year Book, fiscal year figures are indicated in the text and headings of tables; otherwise figures are for calendar years.

INTRODUCTION

THE CANADIAN ECONOMY DURING 1958 AND THE FIRST HALF OF 1959

During the course of 1958 the recessionary influences that had adversely affected the level of economic activity in 1957 gave way to expansionary forces and the gross national product gradually resumed its upward course. By the second quarter of the year, economic activity was showing a firmer trend and by the closing quarter recovery had begun to gather momentum. The first half of 1959 brought evidence of further improvement on a broad front.

THE ECONOMY DURING 1958

As a result of conflicting trends in the economy, the gross national product for 1958, estimated at \$32,500,000,000, was only 2 p.c. higher than the estimate for 1957. Since the greater part of this increase represented higher prices, the gross national product in real terms rose less than 1 p.c., the slight gain being accounted for by higher production in the farm sector; non-farm production remained unchanged. The relative stability in the total volume of output in 1958 compares with gains of 9 p.c. in 1955 and 1956, no change in 1957, and an annual average for the years 1947 to 1958 of 4 p.c.

The main downward pressure in the economy came from business investment, with inventories playing a prominent part. Although liquidation of business inventories was arrested during the course of the year, for the year as a whole final demand was met in part out of stocks that were not replenished from current production. This downward pressure was strongly reinforced by a drop in business expenditures for non-residential construction and for machinery and equipment. The curtailment in expenditures by these three components was equivalent to a decline of about \$1,400,000,000 in terms of new production.

However, these downward pressures were more than counteracted by the continued increase in government and consumer expenditures for goods and services and by renewed expansion in housing. Encouraged by an ample supply of mortgage funds, expenditures for residential construction reached an all-time high. The rising trend of personal income was undoubtedly a source of strength in housing as well as in the consumer sector. At the same time, part of the impact of easing demand fell on foreign rather than on domestic sources of supply; imports of goods and services were substantially below the record level of the previous year. Although there were decided shifts in the composition of exports, reflecting mingled weakness and strength in external markets, exports of goods and services remained close to the record level of the previous year.

By shifting from a moderate surplus to a large deficit, the Federal Government played an important sustaining role in the economy during the recession. The deficit, which began to emerge at the end of 1957 and reached its peak in mid-1958, amounted to \$798,000,000 at the end of that year, in contrast to a surplus of \$239,000,000 at the end of the preceding year.* Government expenditures for goods and services rose 4 p.c. and transfer payments 23 p.c., the latter mainly a reflection of larger disbursements from the unemployment insurance fund and legislative changes in social security schemes enacted in 1957. At the same time, recessionary influences reduced government revenues by 4 p.c.

The outstanding development on the income side was the disparity in rates of increase in the major income components. While national income rose only about 3.5 p.c., personal income and personal disposable income rose 6 p.c. and 7 p.c., respectively. The most important single element in this disparity was the greater flow of transfer payments from

* The shift for all governments combined (federal, provincial and municipal) was from a surplus of \$70,000,000 in 1957 to a deficit of \$1,035,000,000 in 1958.

government to persons, the effect of which was reinforced by a decline in personal direct tax collections; of the \$1,500,000,000 gain in disposable personal income, about 45 p.c. was thus accounted for. National income, which does not measure changes in these transfer-type transactions, was affected by a significant decline in corporate profits. Although the gradual improvement in economic activity resulted in an increase in most income components throughout 1958, the downward trend in corporate profits, in evidence since early in 1956, was not reversed until the latter part of the year.

The following paragraphs describe in more detail the movements of the components of the main statistical aggregates and discuss the patterns of production, employment and prices associated therewith.

THE COMPONENTS OF DEMAND

As previously noted, income available to consumers for spending advanced sharply in 1958. Personal outlay on consumer goods and services reached an estimated \$21,000,000,000, an advance of 5 p.c. over 1957. But this rate of increase fell considerably short of the 7-p.c. rise in income and the rise in the rate of personal saving became one of the notable developments of the year. The ratio of saving to income, in fact, was one of the highest of the postwar period.

The gain in consumption was fairly well distributed over the three main categories, with outlays for non-durables up 5 p.c., for durables up 3 p.c. and for services up 7 p.c. Higher prices and increased real consumption were about equally important in accounting for the higher spending. The upward pressure in prices continued to be most pronounced in the service industries but was evident to some degree in all the other main categories. While the 3-p.c. advance in purchases of durables was modest by comparison with such years as 1955 and 1956, it represented a distinct contrast to 1957 when such purchases remained unchanged. All the main durable categories increased in 1958 but the largest advance was in automobiles. The rate of consumer spending was by no means uniform throughout the year. Most of the annual increase occurred in the first and last quarters, particularly the latter, when seasonal factors are taken into account. This pattern, through time, is largely a reflection of a falling-off in purchases of durables in the two middle quarters of the year.

Outlays for residential construction, reaching new records in 1958, were a powerful stimulus in the economy. Estimated at \$1,800,000,000, the value was 25 p.c. higher than in 1957. During the year 164,632 new dwelling units were started compared with 122,340 in 1957 and a previous record of 138,276 in 1955 and there was a record number of houses under construction at the end of the year. The decisive factor in creating this extremely high level of house construction was the great addition to the supply of mortgage funds. The Federal Government made available for lending the unprecedentedly large sum of \$373,000,000 through the agency of Central Mortgage and Housing Corporation and additional funds also became available from private sources. Throughout the year, housing expenditures rose continuously.

The impact of recessionary influences was clearly apparent in the 1958 trend of business expenditures for plant and equipment. Outlays fell by 13 p.c. to \$5,100,000,000 involving a drop of 9 p.c. for construction and one of 18 p.c. for machinery and equipment, and the trend was still downward at the end of the year. The investment program showed a decided shift of emphasis away from resource industries. Financial services and institutions increased their investment but in all other areas investment was curtailed in varying degrees, the greatest being in mining, which showed a drop of 40 p.c. Investment in manufacturing industries fell 27 p.c., reflecting reduced outlays in all industry divisions except foods and beverages, tobacco products and products of petroleum and coal. Investment outlays of the utilities continued to be large, though below the level of the previous year. The year 1958 marked the completion or near completion of certain major long-term projects such as the St. Lawrence Seaway and Power Project and the Trans-Canada Pipeline, a fact reflected in the trend of investment outlays.

The behaviour of inventories was of importance in the sequence of expansion, recession and recovery. In 1958 the liquidation of business inventories amounted to \$300,000,000 in contrast to approximately the same amount of accumulation in 1957 and the heavy accumulation of \$800,000,000 in 1956. The rate of accumulation began to fall in the latter part of 1956; liquidation set in at the end of 1957 and continued at a high rate in the first half of 1958. By the second half of the year stocks were being built up on a modest scale, thereby adding to the demands on current production.

Total inventories were reduced by \$400,000,000 in 1958 as a result of some reduction of stocks on farms and of grain in commercial channels, in addition to the liquidation of business inventories already mentioned. Most of the drawing down of stocks was concentrated in manufacturing industries and by the year-end manufacturers in general had reduced the ratios of stocks to shipments well below those prevailing at the end of 1956 and 1957, and close to the low levels of year-end 1955. At the same time, there was a slight accumulation of stocks in trade as a whole but, by the year-end, the rise in retail and wholesale sales had reduced the ratio of stocks to sales below those of a year earlier.

Despite weakness in external markets for some important export products, exports of goods and services, valued at \$6,300,000,000 in 1958, were only 2 p.c. below the record established in the previous year. In 1958, even more than in 1957, the trends among individual commodity exports diverged widely within a virtually unchanged total. Two new resource products—uranium and natural gas—were conspicuous among the group showing rising export values; others were wheat and flour, cattle and aircraft. The declining group included such traditional export products as pulp and paper, copper, nickel, lead, zinc and asbestos, as well as two new resource products—iron ore and petroleum. The quarter-to-quarter changes in exports showed no clear pattern.

Typically responsive to changes in the level of economic activity and in the level of investment in particular, imports of goods and services fell to \$7,400,000,000 in 1958, a decline of 6 p.c. The major part of the drop was in commodity imports and was concentrated in the groups that had risen most sharply in 1955 and 1956. When classified on a functional basis* imports of investment goods are shown to have fallen 15 p.c. and imports of industrial materials 8 p.c. Reflecting the strength of demand in the personal sector, imports of consumer goods rose 4 p.c. The sharp contraction in the deficit on commodity trade, accompanied by a growing gap in the deficit on service items, brought a reduction in the over-all deficit on current international account from \$1,400,000,000 in 1957 to \$1,100,000,000 in 1958. However, the annual rate was running considerably above this figure in the second half of the year.

INCOME FLOWS

Reflecting the effect of recessionary influences, corporate profits† fell for the second year in succession and at an estimated \$2,500,000,000 in 1958 were 3 p.c. lower than in 1957 and 15 p.c. lower than in 1956. The trends in corporate earnings by industry varied widely. In general, earnings declined in industries oriented toward the external market or the domestic market for durable goods. On the other hand, some consumer soft goods industries and most service-connected industries experienced higher corporate earnings. The quarterly pattern of corporate profits showed the fluctuations typical of this component. After a series of declines, corporate profits stabilized in the second quarter of 1958 and rose at a sharply accelerating rate in the second half of the year. The more favourable experience of the closing quarter of the year was widespread.

The relatively large rise in personal income was, as already mentioned, to a large extent a result of the rise in transfer payments. However, the increases in the incomes earned in productive activity were also important. Labour income rose to \$16,400,000,000 in 1958, about 3 p.c. higher than in 1957, most of this increase being attributable to a further advance in wage rates. Gains occurred in most service-producing industries; in general, they were quite substantial, reflecting the further expansion of employment in

* Source: Imports by Source and End-Use, *Statistical Summary of the Bank of Canada*, April, 1959.

† Before taxes and after dividends paid abroad, which is the figure included in National Income.

these industries as well as higher average earnings. Labour income in forestry, where employment was sharply reduced, was considerably lower; in mining and manufacturing it was only a little below the level of the previous year. On a seasonally adjusted basis, labour income tended to rise during the course of the year.

Farm net income made a major advance and, at \$1,200,000,000, was 16 p.c. higher than in 1957. This increase reflected larger output and higher prices for livestock and animal products. Net income of unincorporated business (non-farm) was \$2,100,000,000, up 5 p.c., and investment income of persons (dividends, interest and net rents) at \$2,100,000,000 was 6 p.c. higher. It may be noted that dividends did not reflect the decline in corporate earnings.

PRODUCTION, EMPLOYMENT AND PRICES

The level of non-farm production remained unchanged in 1958 but the product pattern of output continued to shift in the direction of the service-producing industries. In general, the impact of recessionary influences fell on the commodity-producing industries.

Manufacturing output was lower by 3 p.c., most of the decline being in the durable group. The 7-p.c. decline in output of durables in 1958 followed one of 4 p.c. in the preceding year. With the exception of non-metallic mineral products and wood products, all the durable groups reduced their output, the most pronounced declines being in transportation equipment and in iron and steel. The non-durable groups displayed mixed trends within a roughly unchanged total. Manufacturing production, after allowing for seasonal factors, showed some recovery in the opening months of the year, rising to a peak in May, followed by a setback in the summer months and renewed expansion in the closing quarter. By December, the seasonally adjusted index of manufacturing production stood at 142.2 (1949=100), about 6 p.c. above its low of one year earlier but still 5 p.c. below its peak in December of 1956.

Although mining production followed a gently declining trend throughout 1958, for the year as a whole it was about the same as in 1957. Output of nickel, asbestos, iron ore and petroleum fell sharply as a result of the deterioration in foreign markets for these products, although in the case of nickel a prolonged industrial dispute was also a factor. Production of uranium and natural gas was greatly expanded, constituting a major element in sustaining over-all output.

Agricultural output was substantially higher by reason of increased production and sales of livestock in response to opportunities for export to the United States and higher domestic prices. Crop production was about the same as in 1957. Production in forestry was considerably lower in the year-to-year comparison; a further sharp decline in output of pulpwood was partially offset by expansion in other forest products.

The goods-handling industries, like the goods-producing industries, were adversely affected by the recession. Transportation, communication and storage activity declined as railways, oil pipelines and shipping had a smaller volume of business to handle. Activity in other service industries continued to rise.

Considering the levels of employment associated with the trends in production, the total number of persons with jobs (5,722,000) was somewhat lower than in 1957, although the number of persons with jobs in the non-farm sector (5,010,000) was slightly higher than in the preceding year. The over-all decline in employment together with the growth of the labour force raised the number of persons without jobs and seeking work, expressed as a percentage of the labour force, from 4.3 p.c. in 1957 to 6.6 p.c. in 1958. A small reduction in hours of work in some industries was further evidence of weakness in the labour market.

An examination of the statistics of employment in non-agricultural establishments gives additional information on the industrial distribution of employment in 1958 and supplements the description of trends in labour income presented earlier. For the year as a whole, the industrial composite index of employment was down 4 p.c., much the sharpest decline being in forestry where it was about 25 p.c. Manufacturing employment was

down 5 p.c., almost all of the decline being in the durable segment. Employment in mining, transportation, communication and storage, and construction was lower by rates that ranged from 3 p.c. to 7 p.c. On the other hand, employment in public utilities, finance, insurance and real estate, and services continued to make modest gains, and employment in trade was unchanged. The underlying trend in employment was obscured to some extent by the incidence of industrial disputes in the latter part of the year but it seems that the strength then beginning to manifest itself in the production indexes was not matched in the employment indexes. However, when capacity is under-utilized production can often be expanded without a commensurate increase in employment.

The rise in consumer prices which began in mid-1956 moderated a little in 1958 and the index for the year averaged 2.6 p.c. higher than in 1957 compared with a 3.2-p.c. increase in that year. All the major component groups of the index were higher in 1958, the largest increase occurred in services where prices rose nearly 4 p.c.; food prices averaged 3 p.c. higher, a lower rate of increase than in 1957.

All the components of gross national expenditure except exports of goods and services continued to register a further price advance in 1958, but the increases were generally smaller than in the preceding year. The easing of pressure on prices was particularly evident in the sector of capital goods, although residential construction showed much the same price change as in the preceding year. The increment in the value of the nation's production attributable to rising prices was 2 p.c., that is, almost all the increase in gross national product.

Advancing final-product prices were accompanied by generally stable prices in wholesale markets. The indexes of wholesale prices for the years 1957 and 1958 were virtually the same but there was a change of trend within the period. Wholesale prices, which had been rising in 1956 to reach a peak at the beginning of 1957, tended to decline a little until the autumn of 1958 but by the end of the year had returned to their previous high. The major increase in wholesale prices in 1958 was in the animal products group. The downward trend in the non-ferrous metals group was arrested and then reversed in the latter half of the year. Some recovery in wood product prices was also evident by the end of 1958. Textile products was the only group to show a persistent downtrend throughout the year.

THE FIRST HALF OF 1959

By the second quarter of 1959 the accumulating strength of expansionary forces had raised the gross national product to \$34,712,000,000, at seasonally adjusted annual rates, nearly 7 p.c. higher than the average for 1958. The slight downtrend in the business expenditures for plant and equipment had been reversed and, while expenditures for housing continued to fall below the extremely high level of the closing quarter of 1958, fixed capital formation was again acting as a stimulus to the economy for the first time since the onset of the recession. Exports had begun to show improvement on a fairly broad base, largely in response to the vigour of recovery in the United States. At the same time, imports were rising in reflection of the progress of recovery in Canada. Further modest accumulation of business inventories was another element of strength. Meanwhile, consumer and government expenditure continued to enlarge the demands on the nation's productive capacity. By June, the index of industrial production was 10 p.c. above its recession low at the end of 1957 and the rate of unemployment had fallen substantially. These developments had taken place within a context of stable wholesale and retail prices. With the progress of recovery and the higher tax rates, government revenues were rising, thus narrowing the deficit. As expansionary forces were increasingly present in the private sector, the sustaining role of the public sector was diminishing in importance.

The most marked development during the first half of the year was the renewed strength in business investment. Expenditures for non-residential construction and for machinery and equipment both turned upward. By the second quarter, business expenditures for plant and equipment had reached a level of \$5,344,000,000, 4 p.c. higher than the annual rate for 1958. At the same time, housing starts began to decline, reflecting the

curtailment of Central Mortgage and Housing loans to builders at the end of 1958; starts for the first six months were decidedly lower than in the same period of 1958 and the value of residential construction was moderately lower. Thus, despite the renewed strength in expenditures for non-residential construction and machinery and equipment, gross fixed capital formation in the first half of the year was at approximately the same level as a year earlier.

The importance of the upsurge of economic activity in the United States to Canada's external trade was apparent from the fact that exports increased even though sales to most overseas markets were lower in the first half of the year; by the end of the second quarter, total sales and sales to the United States had reached new high levels. Improvement was fairly general among the commodity groups but the increases were most pronounced in such minerals as uranium, iron ore, and asbestos, such forest products as lumber, wood pulp, plywood and veneers, and in farm machinery. At the same time, declines occurred in such farm products as wheat, other grains and cattle, in such metals and minerals as nickel, copper and petroleum, and in aircraft and some chemicals. In the previous year, special non-recurring factors had raised the level of exports of some Canadian products, for example wheat and military aircraft. Despite the improvement in sales, many export industries continued to operate at less than capacity.

The general improvement in economic activity in Canada, particularly the recovery in business investment in fixed capital and in inventories, raised the demand for imports. Increases were distributed among industrial materials, consumer goods and some industrial equipment, the last-named being especially apparent in the second quarter.

For the first half of the year merchandise exports were up 2 p.c. and merchandise imports 10 p.c. compared with the same period of 1958, with the result that the deficit on merchandise trade increased from \$140,000,000 to \$355,000,000. Meanwhile, the deficit on non-merchandise transactions also continued upward to reach a total of \$837,000,000, larger than in any half-year since 1957.

By contrast with the first half of 1958 when a substantial part of final demand was being met out of stocks rather than out of current production, the building up of stocks in the first half of 1959 made new demands on the nation's output. The shift from liquidation of business inventories in the one period to accumulation in the other represented about an additional \$800,000,000 in terms of current production. Business inventories figured more prominently in recovery in the first quarter than in the second.

Supported by the advance in personal incomes, consumer expenditure rose moderately in the first half of the year and by the second quarter had reached an annual rate of \$22,092,000,000, 5 p.c. higher than the level of 1958. While the increase in spending was fairly widely distributed, the major part of it was devoted to the purchase of durable goods. Unusually high rates of personal saving continued to be a feature of consumer behaviour in the first half of 1959. In real terms, per capita consumption was 3 p.c. higher and purchases of durables 5 p.c. higher than in the same period of 1958.

Considering developments on the income side, corporate profits in the first half of the year, remaining at the high level to which they had returned by the closing quarter of 1958, were more than 20 p.c. higher than in the same period a year earlier. Labour income continued to rise, reflecting the improvement in the employment situation and higher average earnings. The 8-p.c. advance compared with a year earlier was the outcome of fairly substantial gains in almost all industries. As a result of reduced employment in mining, the wage bill in this industry was only a little higher. Unlike the year 1958 when a relatively large part of the increase in personal income came in the form of transfer payments from government, in the first half of 1959 transfer payments and incomes earned in productive activity rose at about the same rate. Personal income rose 7.5 p.c.

The pattern of production emerging in the first half of the year reflected recovery in the goods-producing industries. Output increased in both the durable and non-durable segments of manufacturing, despite declines in some individual industries, bringing the total index for June up 3.5 p.c. from the preceding December and 10 p.c. above its recession

low. The gain in mining production was much more pronounced, partly as a result of industrial disputes late in 1958. Forestry production was also higher. In general, production in the service-producing industries continued to rise during the recession and expanded further in the first half of 1959.

Comparing the first half of 1959 with the same period of 1958, real output as a whole was about 5 p.c. higher, with the goods-producing and the service-producing sectors showing about the same rate of advance. Construction was the only industry with a lower output. Employment showed greater than seasonal strength in the opening months of the year and by June the number of persons with jobs, 6,053,000, was at an all-time high, and 174,000 more than a year earlier. The number of persons without jobs had fallen more than seasonally and in June represented 4.6 p.c. of the labour force, compared with 7.2 p.c. a year earlier. The number of persons with jobs in the first six months of 1959 was nearly 2.5 p.c. higher than in the same period of 1958. Thus the expansion in employment continued to fall short of the growth in output.

The industrial composite index of employment and its manufacturing component rose 2 p.c. in the first six months of the year on a seasonally adjusted basis. The greater part of the non-seasonal expansion in employment opportunities in manufacturing was in the durable goods industries, despite the large-scale lay-offs in the aircraft industry that followed the cancellation of contracts in February. Although there was general improvement in the employment situation, the composite index in June was still appreciably below the peak reached two years earlier.

PART I.—GEOGRAPHY*

Canada comprises the greater part of the northern half of North America and lies between the United States, Alaska and Greenland. In longitude Canada extends from Cape Spear, Newfoundland, at 52°37'W, to Mount St. Elias, Yukon Territory, at 141°W, a distance of 88°23'. In latitude it stretches from Middle Island, Lake Erie, at 41°41'N, to the North Pole. The northernmost point of land is Cape Columbia on Ellesmere Island, at 83°07'N. Thus Canada is essentially a western and a northern country, a fact of increasing strategic significance. Moreover the climatic, vegetal and soil belts are drawn out into broad east-west zones, thereby supporting the east-west orientation of the main frontier of the country and aiding Canada's historic east-west development.

The shape of Canada is like a distorted parallelogram with its four corners making important salients. In the north the salient formed by the Arctic Archipelago, which penetrates deep into the Arctic basin, guards the northern approaches to the Continent from Europe and Asia and makes Canada neighbour to the Union of Soviet Socialist Republics. In the south the salient of peninsular Ontario thrusts far into the heart of the United States. In the east the salient of Labrador and the Island of Newfoundland commands the shortest crossings of the North Atlantic Ocean and links Canada geographically with the United Kingdom and France. In the west the broad arc of land between Vancouver in southern British Columbia and Whitehorse in Yukon Territory provides

* Revised by the Geographical Branch, Department of Mines and Technical Surveys, Ottawa.

the shortest crossings of the North Pacific Ocean between continental North America and the Far East. Canada thus stands at the crossroads of contacts with the principal powers and some of the most populous areas of the world.

In size, Canada is the largest country in the Western Hemisphere and the second largest country in the world. Its area of 3,851,809 sq. miles may be compared with that of the Union of Soviet Socialist Republics, 8,649,821 sq. miles,* the United States of America (including Alaska), 3,608,790 sq. miles,* and Brazil, 3,287,204 sq. miles.* It is more than forty times the size of the United Kingdom and eighteen times that of France. The immense size of the country, while encompassing many resources and seeming to afford much scope for settlement, imposes its own burdens and limitations, particularly because much of the land is mountainous and rocky or is under an arctic climate. The developed portion is probably not more than one-third of the total; the occupied farm land is only 7.7 p.c. and the currently accessible productive forested land 18.7 p.c. of the total. The population of Canada, estimated at 17,048,000 on June 1, 1958, may be compared with 168,174,000* for the United States (excluding Alaska) (1956) and with 59,846,000* for Brazil (1956).

1.—Approximate Land and Freshwater Areas, by Province or Territory

NOTE.—A classification of land areas as agricultural, forested, etc., is given at p. 14.

Section 1.—Physical Geography

Subsection 1.—Physiographic Regions

Canada includes each of the major characteristic structures of the North American Continent with the exception of the Atlantic coastal plain. Structure tends to dominate relief to a remarkable degree even though its effects have been modified by glacial and river erosion or deposition. Consequently, structural regions have become main physiographic divisions. Basically, Canada consists of a central rocky upland or shield, sloping down to flanking basins filled with sedimentary strata and rising again at the margins to mountains of folded rocks, interspersed with igneous intrusions.

* United Nations Statistical Yearbook, 1957.

Eight physiographic regions dominate the country: (1) the Cordilleran Region; (2) the Appalachian Region; (3) the Innuitian Region; (4) the Great Lakes St. Lawrence Lowlands; (5) the Interior Plains; (6) the Hudson Bay Lowlands; (7) the Arctic Lowlands and Plateaus; and (8) the Canadian Shield. Descriptions of these regions (under slightly different nomenclature) are given in the 1957-58 Year Book at pp. 3-9.

Subsection 2.—Inland Waters

The inland waters of Canada (not including saltwater areas that are a part of Canada) are extensive, constituting over 7.6 p.c. of the total area of the country. They are best studied by segregating the main drainage basins as shown in Table 2.

2.—Drainage Basins

Drainage Basin and Province or Territory	Area Drained ¹	Drainage Basin and Province or Territory	Area Drained ¹
	sq. miles		sq. miles

¹ Areas are approximate and are exclusive of those portions of the basins of all rivers that lie in United States territory, and of areas of interior drainage.

During the early period of exploration and development the waterways of Canada were the sole means of access to and travel in the interior. This function is still of importance to much of the country, particularly in the north where most traffic moves by water or by air. In the settled areas, however, the construction of roads and railways has reduced the role of the waterways as transportation routes but they have assumed other functions. Some, particularly in the Canadian Shield area and the Cordilleran region, have been harnessed for the production of electric power. Others, mainly in southern Alberta and Saskatchewan, have been dammed to provide water for irrigation purposes. In Eastern Canada many of the rivers have been controlled in an over-all program of flood prevention and conservation of renewable resources or to provide dependable supplies of water for industrial and domestic purposes.

In Eastern Canada, the Great Lakes and St. Lawrence drainage system dominates all others and forms an unequalled navigable inland waterway through an extensive region rich in natural and industrial resources. From Duluth, Minn., at the head of Lake Superior to Belle Isle at the entrance to the Gulf of St. Lawrence the distance is 2,280 miles. The St. Lawrence waterway and its tributaries, most of which have lakes available for reservoiring, have very large developed and potential power resources.

The greater part of Canada drains into Hudson Bay and the Arctic Ocean; the Nelson River drainage is exceptional in running *through* the most arable and the most settled part of Western Canada but otherwise the rivers of the West, east of the Rockies, run *away* from the settled areas towards the cold northern salt waters and this adversely affects their industrial utility. The Mackenzie River, which drains Great Slave Lake, is, with its headwaters, the longest river in Canada (2,635 miles) and its valley constitutes the natural transportation route through the Northwest Territories to the Arctic Ocean. From Fort Smith on the Slave River large river boats run without any obstruction to Aklavik on the delta of the Mackenzie, a distance of 1,292 miles. Table 3 gives the lengths of the principal rivers with their tributaries, classified according to the four major drainage basins.

3.—Lengths of Principal Rivers and Their Tributaries

NOTE.—In this table the tributaries and sub-tributaries are indicated by indention of the names. Thus the Ottawa and other rivers are shown as tributary to the St. Lawrence, and the Gatineau and other rivers as tributary to the Ottawa.

The outstanding lakes of Canada are the Great Lakes, though only parts of these are in Canadian territory. The International Boundary between Canada and the United States passes through Lakes Superior, Huron, St. Clair, Erie and Ontario. Details are given in Table 4.

4.—Elevations, Areas and Depths of the Great Lakes

Lake	Elevation Above Sea-level	Length	Breadth	Maximum Depth	Total Area	Area on Canadian Side of Boundary
	ft.	miles	miles	ft.	sq. miles	sq. miles

St. Clair.....	575.30	26	24	23	460	270
Erie.....	572.40	241	57	210	9,940	5,094
Ontario.....	245.88	193	53	774	7,540	3,727

There are no tides in the Great Lakes although considerable variation in water levels is occasioned by strong winds.

Other large lakes of Canada, ranging in area from 9,000 to 12,000 sq. miles, are Lake Winnipeg, Great Slave Lake and Great Bear Lake. Apart from these, notable for size, are innumerable lakes scattered over that major portion of Canada lying within the Canadian Shield. In an area of 6,094 sq. miles, accurately mapped, south and east of Lake Winnipeg, there are 3,000 lakes. In an area of 5,294 sq. miles, accurately mapped, southwest of Reindeer Lake in Saskatchewan, there are 7,500 lakes.

5.—Elevations and Areas of Principal Lakes, by Province

NOTE.—Areas given are for mean water levels. For those reservoirs and lakes for which two elevations are given, HW means high water, LW low water, and N normal level.

Subsection 3.—Coastal Waters

The coastline of Canada, one of the longest of any country in the world, comprises the following estimated milages:—

Mainland—

Atlantic, 6,110; Pacific, 1,580; Hudson Strait, 1,245; Hudson Bay, 3,155; Arctic, 5,770; total, 17,860 miles.

Islands—

Atlantic, 8,680; Pacific, 3,980; Hudson Strait, 60; Hudson Bay, 2,305; Arctic, 26,785; total, 41,810 miles.

A comprehensive description of the coastal waters of Canada would require information from sciences such as oceanography, marine biology and meteorology. However, the basic factor in any study of the oceanic-continental margin is the physical relief of the sea floor and the scope of the information presented here is therefore restricted to this and a few salient features of the Atlantic, Arctic and Pacific marginal seas surrounding Canada. Further details are given in the 1947 Year Book, pp. 3-12.

Atlantic.—Along this coastal area, the sea has inundated valleys and lower parts of the Appalachian Mountains as well as those of the Canadian Shield. The submerged Continental Shelf, protruding seaward from the shore, effects the transition from continental to oceanic conditions. This Shelf is distinguished by great width and diversity of relief. From the coast of Nova Scotia its width varies from 60 to 100 miles, from Newfoundland 120 to 50 miles (at the entrance of Hudson Strait), and northward it merges with that of the Arctic Ocean. The outer edge of the Shelf, known as the Continental Shoulder, is of varying depths of from 100 to 200 fathoms before the Shelf suddenly gives way to the steep declivity leading to abyssal depths. The over-all gradient of the Atlantic Continental Shelf is slight but the whole area is studded with shoals, plateaux, banks, ridges and islands and the coasts of Nova Scotia and Newfoundland are rugged and fringed with islets and shoals. Off Nova Scotia the 40-fathom line lies at an average of 12 miles from the shore and constitutes the danger line for coastal shipping. The whole floor of the marginal sea appears to be traversed by channels and gullies cutting well into the Shelf.

The main topographical features of the Atlantic marginal sea floor are attributed to glacial origin but land erosion is an important factor. Eroded materials are carried seaward by rivers, ice and wind, and wave action against cliffs and shore banks washes away enormous masses that are deposited over the surrounding sea floor. The topography of the continental sea floor is therefore constantly changing and navigation charts of Canada's eastern seaboard must be continuously revised.

Arctic.—The submerged plateau protruding from the northern coast of North America is a major part of the Great Continental (or Polar) Shelf surrounding the Arctic Ocean on which lie all the Arctic islands of Canada, Iceland, Greenland and most of those of Europe and Asia. This Shelf develops its maximum width on the 80th meridian of west longitude where it extends from the south of James Bay to the north coast of Ellesmere Island, a distance of over 2,000 miles.

The floor topography of this continental margin is largely unexplored but sufficient has been charted to indicate an abrupt break at the northern oceanward edge. This steep continental terrace borders the whole western side of the Canadian Archipelago and constitutes one of the most striking and significant features of the Polar regions. From this declivity, deep well-developed troughs cut by glaciers enter between the western group of islands. A ridge across Davis Strait on which the depth is about 200 fathoms separates this basin from the open Atlantic.

Hudson Bay and Hudson Strait bite deeply into the Continent. Hudson Bay is an inland sea 250,000 sq. miles in area having an average depth of about 70 fathoms; the greatest charted depth in the centre of the Bay is 141 fathoms.

Hudson Strait separates Baffin Island from the continental coast and connects Hudson Bay with the Atlantic Ocean. It is 430 miles long and from 37 to 120 miles wide and its greatest charted depth of 481 fathoms is close inside the Atlantic entrance. Great irregularities of the sea floor are indicated but, except in inshore waters, few navigation hazards have been located.

The composition and resources of that part of the Shelf offshore and north of the Queen Elizabeth Islands is to be the subject of extensive study. In 1959 the Canadian weather station at Isachsen on Ellef Ringnes Island will be the headquarters for a reconnaissance survey extending as far as Meighen Island on the east and Borden Island on the west. In the following two years experts will probe through the permanent polar ice to determine the dimensions of the Shelf offshore, believed to extend from 80 to 150 miles out to sea. In addition such other data as the nature of currents and composition of the Shelf itself will be explored.

Pacific.—The marginal sea of the Pacific differs strikingly from the other marine zones of Canada. The hydrography of British Columbia is characterized by bold, abrupt relief—a repetition of the mountainous landscape. Numerous inlets penetrate the mountainous coast for distances of 50 to 75 miles. They are usually a mile or two in width and of considerable depth, with steep canyon-like sides. From the islet-strewn coast, the Continental Shelf extends from 50 to 100 sea miles to its oceanward limit where depths of about 200 fathoms are found. There the sea floor drops rapidly to the Pacific Deep, parts of the western slopes of Vancouver Island and the Queen Charlotte Islands lying only four miles and one mile respectively from the edge of the declivity. These great detached land masses are the dominant features of the Pacific marginal sea. As is to be expected in a region so irregular in hydrographic relief, shoals and pinnacle rocks are numerous, necessitating cautious navigation. A grave menace to coastal shipping plying the Seymour Narrows between Vancouver Island and the mainland was eliminated on Apr. 5, 1958, when the twin peaks were blasted off Ripple Rock in one of the largest non-atomic explosions created by man. The peaks had reached to within 9 feet and 21 feet of the surface during low water, and had been responsible for the sinking and damaging of some 114 vessels during the past 80 years. Their presence caused treacherous disturbances and whirlpools to form as the ocean tides rushed through the Narrows, and only the most highly powered vessel would attempt to navigate the channel during any period other than the 20 to 40 minutes of slack water between tides. The blast increased the clearance to 47 feet and 69 feet at low water and the channel is now navigable at all times.

Subsection 4.—Islands

The largest islands of Canada are in the north and all experience an Arctic climate. The northern group extends from the islands in James Bay to Ellesmere Island which reaches 83°07'N. Those in the District of Franklin lie north of the mainland of Canada

and are generally referred to as the Canadian Arctic Archipelago; those in the extreme north—lying north of the M'Clure Strait—Viscount Melville Sound—Barrow Strait—Lancaster Sound water passage—are known as the Queen Elizabeth Islands.

On the West Coast, Vancouver Island and the Queen Charlotte Islands are the largest and the most important but the coastal waters are studded with many small rocky islands.

The Island of Newfoundland forming part of the Province of Newfoundland, the Province of Prince Edward Island, Cape Breton Island forming part of the Province of Nova Scotia, Grand Manan and Campobello Islands forming part of the Province of New Brunswick, and Anticosti Island and the Magdalen group included in the Province of Quebec are the chief islands off the East Coast.

Notable islands of the inland waters include Manitoulin Island (1,068 sq. miles in area) lying in Lake Huron, the so-called Thirty Thousand Islands of Georgian Bay and the Thousand Islands in the outlet from Lake Ontario into the St. Lawrence River.

6.—Islands over 2,000 Square Miles in Area

Subsection 5.—Mountains and Other Heights

The predominant geographical feature in Canada is the Great Cordilleran Mountain System which contains many peaks over 10,000 feet in height. The highest peak in Canada is Mount Logan in the St. Elias Mountains of Yukon Territory, which rises 19,850 feet above sea level. The highest elevations in all parts of the country are shown in Table 7 in feet above mean sea level. More accurate measuring devices have, in recent years, brought to light discrepancies in the elevations listed in previous editions of the Year Book. Table 7 records the latest available data.

7.—Principal Heights in each Province and Territory

NOTE.—Certain peaks, indicated by an asterisk (*), form part of the line of demarcation between political subdivisions. Although their bases technically form part of both areas, they are listed only under one to avoid duplication. This table has undergone considerable revision since publication in previous editions of the Year Book.

Section 2.—Physical and Economic Features of the Provinces and Territories

Politically Canada is divided into ten provinces and two territories. Each of the provinces is sovereign in its own sphere, as set out in the British North America Act of 1867 and its amendments, and as new provinces have been organized (*see* p. 59) they have been granted political status equivalent to that of the original provinces. The Yukon and Northwest Territories, with their present boundaries, are administered by the Federal Government. The main physical and economic features of each of the provinces and of the territories are described briefly in the 1956 Canada Year Book at pp. 12-17. In the present edition, the physical characteristics of the provinces and territories are covered very adequately in their relation to climate in the special article on The Climate of Canada at pp. 23-51. Details of resources and their development are given in later chapters.

THE ATLAS OF CANADA PROJECT*

An Atlas of Canada, published by the Federal Government, became available for distribution in December 1958.† Its antecedents go back to 1905 when the first such reference atlas was produced. A revised edition appeared ten years later but the need for another revision has long been felt. In 1937 the Canadian Committee of the International Geographical Union suggested that a new atlas be produced. The matter was ultimately referred to the Canadian Social Science Research Council which in 1945 published a report on the need for and the desired scope of such an atlas, concluding that the project could be undertaken only by the Federal Government. The Government's decision to implement the recommendations of the report came in December 1948, placing with the Geographical Branch of the Department of Mines and Technical Surveys the responsibility of over-all co-ordination.

Since the new Atlas of Canada, like its predecessors, was envisaged as a presentation of the broader aspects of geography, covering a wide variety of topics and serving highly specialized needs, it was recognized that many other departments of the Federal Govern-

* Prepared by N. L. Nicholson, Director of the Geographical Branch, Department of Mines and Technical Surveys, Ottawa.

† Available from the Queen's Printer, Ottawa, price \$25.

ment, in addition to provincial and private individuals, would be involved in its production. An interdepartmental advisory committee was therefore set up under the chairmanship of the Director General of Scientific Services in the Department of Mines and Technical Surveys; other members represented the Departments of Agriculture, Trade and Commerce, Transport, Northern Affairs and National Resources, National Defence, Fisheries, and the Public Archives of Canada. Sub-committees were also organized in every department concerned and through them recommendations on the subject matter to represent their particular disciplines were obtained. By 1954 the planning stages had been completed and the formal committees were disbanded.

The first step of actual production was to prepare suitable base maps. These were constructed according to the Lambert Conformal Conic projection with 77° and 49° as the standard parallels, modified north of 80°N . Maps of the whole country on one sheet of the Atlas were drawn on a scale of 1:10M (approximately 158 miles to one inch); a second scale, 1:20M, enabled several maps of Canada to be shown on a single sheet; a third scale 1:5M was used for maps of the northern, eastern and western sections of the country; and a fourth basic scale, 1:2½M, was used for regional maps of smaller areas. Thus all maps in the Atlas are on scales that bear a simple numerical relationship to one another. While these were being prepared, the material to be printed on the bases was being collected, interpreted and compiled, and in 1955 the first sheet was sent for printing.

The individual sheets of the Atlas have been arranged so that, when read in sequence, the maps characterize and give meaning to the internal development of the country and, to some extent, its international relations. Thus the first three sheets in the Atlas take the reader back to the origins of the country. One shows the routes taken by the principal explorers and the other two show portions of the original early maps which resulted from explorations. From the old maps, the Atlas proceeds to modern mapping, with examples of present-day topographical sheets and aeronautical and hydrographic charts, and thence to maps of the physical aspects of Canada's geography such as relief, geology, climate, soil and vegetation. Plates 46 to 57 are concerned with human resources and show such data as the distribution of population, origins of the people, principal religions, and birth, marriage and death rates. Plates 58 to 91 deal with the ways in which the people have used the physical resources and include maps of fisheries, sawmills, the distribution of farm animals and crops, mining, power and manufacturing as well as the transportation and communication networks which have developed as a result of such activities. The next 17 plates show the way in which institutions—such as hospitals and universities—and towns, cities and rural municipalities have become distributed as a result of physical environment and economic activities. Plate 109 shows the political evolution of Canada from colonial times to the present while Plate 110, the final sheet in the Atlas, shows some of Canada's international political affiliations.

PART II.—LAND RESOURCES AND PUBLIC LANDS

Section 1.—Land Resources

Information currently available regarding Canada's vast land resources is shown in Table 1, where the land area is classified as occupied agricultural, forested and 'other' land, the latter including urban land, road allowances, grass and brush land and all waste land such as open muskeg, swamp and rock. Soil surveys now under way by the Department of Agriculture will make it possible in the future to estimate the amount of arable land Canada possesses and, as provincial inventories are completed, more information will be available regarding land now non-forested but not productive in an agricultural sense. The Forestry Branch of the Department of Northern Affairs and National Resources estimates that about 45 p.c. of the land area of Canada is forested and, according to the Census of 1956, less than 8 p.c. is classed as occupied farm land. A great part of the 1,706,421 sq. miles of 'other' land is located in the Yukon and Northwest Territories which together have a land area of 1,458,784 sq. miles. The occupied farm land in these Territories is practically nil and the forested area is estimated at 275,800 sq. miles.

1.—Land Area Classified as Occupied Agricultural or Forested, by Province

NOTE.—Figures for occupied agricultural land were obtained from the 1956 Census; areas of forested land were compiled by the Forestry Branch, Department of Northern Affairs and National Resources from estimates supplied by the Forest Service in each province.

¹ Less than one square mile.

² Included in *Forested Land*; duplication eliminated in the item *Net Productive Land*.

³ Includes areas of recent burn, cut-over or windfall, not yet restocked.

⁴ Areas incapable of producing crops of merchantable timber because of adverse climatic, soil or moisture conditions.

⁵ Includes only occupied agricultural land (less forest woodland) plus productive forested land.

⁶ Comprises all urban land, road allowances, grass and brush land and all waste land such as open muskeg, swamp and rock.

⁷ *Net Productive Land* plus *Non-productive Forested Land* plus *Other Land*.

Section 2.—Public Lands

In Table 2 classifying the area of Canada by tenure, items 2, 3, 4 and 5 are obtained from Federal Government sources and items 1, 6, 7 and 8 from Provincial Government sources.

¹ Includes Gatineau Park (86 sq. miles) and Quebec Battlefields Park (0.36 sq. mile) which are under federal jurisdiction but are not technically National Parks. ² Less than one square mile. ³ Includes an area of less than one square mile set aside as a Provincial Park but not yet developed. ⁴ Includes 952,849 sq. miles set aside by Order in Council as native game preserves in which only Indians and Eskimos may hunt, but which are not regarded as National Parks. ⁵ Includes Wood Buffalo Park (13,675 sq. miles) which, although reserved by the Federal Government, is not administered as a National Park. ⁶ That part of Wood Buffalo Park in N.W.T. ⁷ A forest experiment area of 25 sq. miles is included in National Parks figure. ⁸ Provincial forest reserves are also used to some extent as recreational areas.

Subsection 1.—Federal Public Lands

Public lands under the administration of the Federal Government comprise lands in the Northwest Territories including the Arctic Archipelago and the islands in Hudson Strait, Hudson Bay and James Bay, lands in Yukon Territory, Ordnance and Admiralty Lands, National Parks and National Historic Sites, Forest Experiment Stations, Experimental Farms, Indian reserves and in general all public lands held by the several Departments of the Federal Government for various purposes connected with federal administration. These lands are administered under the Territorial Lands Act (R.S.C. 1952, c. 263) and the Public Lands Grants Act (R.S.C. 1952, c. 224) which became effective June 1, 1950, and replaced previous legislation.

The largest areas under federal jurisdiction are in the Northwest Territories and Yukon Territory where only 71 sq. miles of a total area of 1,511,979 sq. miles are privately owned. This part of the national domain, with the exception of the islands in Hudson Bay and James Bay, is all north of the 60th parallel of latitude and occupies about 40 p.c. of the surface of Canada. It is under the administration of the Northern Administration and Lands Branch of the Department of Northern Affairs and National Resources.

Subsection 2.—Provincial Public Lands

Public lands of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia (except the Railway Belt and Peace River Block) have been administered since Confederation by the Provincial Governments. In 1930 the Federal Government transferred the unalienated portions of the natural resources of Manitoba, Saskatchewan, Alberta and of sections of British Columbia to the respective governments and all unalienated lands in the Province of Newfoundland, except those administered by the Federal Government, became provincial public lands under the Terms of Union on Mar. 31, 1949. All land in the Province of Prince Edward Island has been alienated except 125 sq. miles under federal and provincial administration.

Information regarding provincial public lands may be obtained from the respective provinces. (See the Directory of Sources of Official Information, Chapter XXVII, under "Lands".)

Subsection 3.—National and Provincial Parks

The future of Canada in the field of outdoor recreation is being wisely provided for by the establishment of National and Provincial Parks. Many of these parks are easily accessible by highway, rail or air and offer every type of accommodation from camping facilities to cabins and palatial hotels. A wide variety of summer and winter recreational attractions are available in mountain, lakeland, woodland and seaside areas of exceptional scenic beauty.

The extent of the park areas in each province is given in Table 2 on p. 15; location, year of establishment, area, and main characteristics of each National Park are given in Table 3, which is followed by a brief description of the Provincial Parks.

National Parks.—From 1885, when the first National Park was established around the mineral hot springs at Banff, Alta., until 1958, 18 areas covering more than 29,000 sq. miles have been established as National Parks.

These parks are maintained by the Federal Government for the protection of their flora, fauna and natural phenomena, for the preservation of their scenic beauty and interest and, in some, the marking of their historical significance in the building of the nation. They are supervised by the National Parks Branch, Department of Northern Affairs and National Resources and are developed and maintained in such a manner as to provide perpetual inspiration, education and healthful recreation for present and future generations.

The National Parks are Canada's greatest single tourist attraction. Accommodation in privately owned hotels, cabins, chalets, lodges and cottages is available and modern cabins have been built in several of the parks by the National Parks Administration

to afford low-rental accommodation for park visitors. Recreational facilities include equipped camp grounds, some with trailer-park facilities; golf courses in superb scenic settings; tennis courts; bowling greens; well-equipped children's playgrounds; athletic fields; horseshoe pitches; outdoor checker-boards; and, in some of the parks, heated outdoor swimming pools with dressing-room buildings, and amphitheatres where plays, concerts and film shows are held in the open. For winter sports there are downhill and slalom ski courses, ski jumps, ski tows and, at Banff, a chairlift.

A park warden service protects the forests and wildlife and maintains constant vigilance for the safety and comfort of visitors. Stocking and transfer of game fish are carried out extensively and successfully in order to improve angling opportunities in park waters; fish hatcheries are operated in three of the mountain National Parks. The Scientific Management of Game Fish in Canada's National Parks is the subject of a special article on pp. 35-39 of the 1956 Year Book. Two of the National Parks are largely big-game preserves where herds of buffalo and other animals find sanctuary.

In addition to the scenic, recreational and wild animal parks, Canada has 14 national historic parks. The National Parks Branch of the Department of Northern Affairs and National Resources is also responsible for the marking, preservation and restoration of places of great historic interest in Canada. More than 525 such sites have been marked on the recommendation of the Historic Sites and Monuments Board of Canada.

3.—Location, Year Established, Area and Characteristics of National Parks

Park	Location	Year Estab- lished	Area sq. miles	Characteristics
Scenic, Recreational and Animal Parks				
Terra Nova.....	On Bonavista Bay, Newfoundland, 150 miles north of St. John's.	1957	156.0	Maritime area now under development; rocky headlands, wooded areas with abundant wildlife, off-shore and fresh-water fishing.
Prince Edward Island..	North shore of Prince Edward Island.	1937	7.0	Strip 25 miles long on shores of the Gulf of St. Lawrence. Recreational area, fine bathing beaches. Accessible by highway. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Cape Breton Highlands.	Northern part of Cape Breton Island, N.S.	1936	367.2	Rugged Atlantic coast line with mountain background. Fine seascapes. Recreational opportunities. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Fundy.....	On Bay of Fundy between Moncton and Saint John in New Brunswick.	1948	79.5	Delightful recreational area. Forested region, wildlife sanctuary, rugged terrain. Bungalow cabin accommodation. Equipped camp grounds.
Georgian Bay Islands..	In Georgian Bay, north of Midland, Ont.	1929	5.4	Recreational and camping area. Unique pillars on Flowerpot Island. Accessible by boat from nearby mainland points. Equipped camp grounds and annual youth camps on Beausoleil Island.
Point Pelee.....	On Lake Erie in south-western Ontario.	1918	6.0	Recreational area. Remarkable beaches, southern flora. Resting place for migratory birds. Accessible by highway. Hotel and bungalow cabin accommodation. Equipped camp grounds.
St. Lawrence Islands...	In St. Lawrence River between Brockville and Kingston, Ont.	1914	171.7 (acres)	Mainland area and 12 islands among Thousand Islands. Recreational and camping area. Accessible by highway; by boat from nearby mainland points.

3.—Location, Year Established, Area and Characteristics of National Parks—continued

Park	Location	Year Estab- lished	Area	Characteristics
			sq. miles	
Scenic, Recreational and Animal Parks —concluded				
Riding Mountain.....	Southwestern Manitoba, west of Lake Winnipeg.	1929	1,148.0	Playground and wildlife sanctuary on summit of escarpment. Fine lakes. Accessible by highway. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Prince Albert.....	Central Saskatchewan, north of Prince Albert.	1927	1,496.0	Forested region dotted with lakes and interlaced with streams. Summer playground and recreational area. Accessible by highway. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Banff.....	Western Alberta, on east slope of Rockies.	1885	2,564.0	Magnificent scenic recreational area; noted resorts, Banff and Lake Louise. Mineral hot springs; summer and winter sports. Accessible by rail and highway. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Elk Island.....	Central Alberta, near Ed- monton.	1913	75.0	Fenced preserve containing large herd of buffalo; also deer, elk and moose. Popular recreational area. Accessible by highway. Bungalow cabin accommodation and equipped camp grounds.
Jasper.....	Western Alberta, on east slope of Rockies.	1907	4,200.0	Mountain playground and noted wildlife sanctuary. Majestic peaks, ice fields, beautiful lakes and famous resort, Jasper. Mineral hot springs, summer and winter sports. Accessible by rail and highway. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Waterton Lakes.....	Southern Alberta, adjoining Glacier Park in Mont- ana, U.S.A.	1895	203.0	Canadian section, Waterton-Glacier International Peace Park. Mountain playground with spectacular peaks and beautiful lakes. Accessible by highway. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Glacier.....	Southeastern British Col- umbia, on summit of the Selkirk Range.	1886	521.0	Superb alpine region, towering peaks, glaciers and forests. Accessible by rail only. Climbing, skiing, camping.
Kootenay.....	Southeastern British Col- umbia, on west slope of Rockies.	1920	543.0	Encloses Vermilion - Sinclair section of Banff - Windermere Highway. Broad valleys, deep canyons, mineral hot springs. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Mount Revelstoke....	Southeastern British Col- umbia, on west slope of Selkirks.	1914	100.0	Rolling mountain-top plateau. Colourful alpine meadows. Accessible by rail and highway. Summer accommodation in Park; all-year accommodation in town of Revelstoke. Championship ski runs and ski jump. Equipped camp grounds.
Yoho.....	Eastern British Columbia, on west slope of Rockies.	1886	507.0	Lofty peaks, magnificent waterfalls, colourful lakes. Yoho and Kicking Horse Valleys. Accessible by rail and highway. Hotel and bungalow cabin accommodation. Equipped camp grounds.
Wood Buffalo ¹	Partly in Alberta and partly in Northwest Ter- ritories, between Atha- basca and Slave Rivers.	1922	17,300.0	Immense region of forests and open plains. Home of largest remaining herd of bison on the Continent. Other wildlife abundant.

¹ Administered by the Northern Administration and Lands Branch, Department of Northern Affairs and National Resources.

3.—Location, Year Established, Area and Characteristics of National Parks—concluded

Park	Location	Year Estab- lished	Area	Characteristics
Historic Parks			acres	
Signal Hill.....	St. John's, Nfld.....	1958	243.4	Location of military installations and site of operations and battles in 1700's. Cabot tower.
Fort Anne.....	Nova Scotia, at Annapolis Royal.	1917	31.0	Site of early Acadian settlement. Museum and well-preserved earthworks.
Fortress of Louisbourg.	Cape Breton Island, N.S., 25 miles from Sydney.	1941	339.5	Ruins of walled city erected by the French, 1720-40. Interesting excavations. Museum.
Halifax Citadel.....	Halifax, N.S.....	1956	37.0	Defence post constructed 1828-42. Museums.
Port Royal.....	Port Royal, N.S., 8 miles from Annapolis Royal.	1941	20.5	Restoration of "Habitation" or first fort built in 1605 by Champlain, DeMonts and Poutrincourt.
Fort Beauséjour.....	New Brunswick, near Sackville.	1926	81.3	Site of French fort erected in middle of 18th century. Museum.
Fort Chambly.....	Chambly, Que.....	1941	2.5	French fort on Richelieu River, first built in 1665. Museum.
Fort Lennox.....	Île aux Noix, Que., near St. Johns.	1941	210.0	Site of early French fort built in 1759.
Fort Malden.....	Amherstburg, Ont.....	1941	5.0	Site of defence post built 1797-99. Museums.
Fort Wellington.....	Prescott, Ont.....	1941	8.5	Defence post built 1812-13. Museum.
Woodside.....	Kitchener, Ont.....	1954	11.0	Boyhood home of the Rt. Hon. William Lyon Mackenzie King, former Prime Minister of Canada.
Fort Prince of Wales....	Northern Manitoba, near Churchill.	1941	50.0	Ruins of fort built 1733-71 to secure control of Hudson Bay for England.
Lower Fort Garry.....	Manitoba, 20 miles north of Winnipeg.	1951	13.0	Stone-walled fort built by the Hudson's Bay Company between 1831 and 1839.
Fort Battleford.....	Saskatchewan, 4 miles south of North Battleford.	1951	36.7	North West Mounted Police post built in 1876.

Provincial Parks.—In addition to the National Parks described above, most of the provincial governments have established parks within their boundaries. These parks, in the same way as the National Parks, are areas of special scenic or other interest, preserved and maintained for the benefit of the public but many of them are still undeveloped. A detailed list of Provincial Parks, showing location, year established, area, and a short description of each, is given in the 1954 Year Book, pp. 26-30. The more important parks in each province are mentioned briefly here.

Newfoundland.—There are 55 sq. miles of provincial park area in Newfoundland—42 sq. miles on the west coast established as Serpentine Park is undeveloped; Sir Richard Squires Memorial Park on the Upper Humber River and Butter Pot Park on the Avalon Peninsula are under development. Surveys are being conducted with a view to setting aside about 400 acres of Crown lands throughout the province to be used as picnic and camp sites, ranging in size from one-half-acre to 50-acre lots.

Nova Scotia.—The Provincial Wildlife Park at Shubenacadie is operated by the Department of Lands and Forests. It is a 28-acre tract of land maintained in its natural state as far as possible consistent with providing housing for the animals and birds that are its main display attraction. Such facilities permit the park's annual attendance of some 225,000 visitors to see wildlife at close range. Expansion is planned as more varieties of birds and animals become available and can be absorbed.

Quebec.—The Province of Quebec has established five Provincial Parks and eight Fish and Game Reserves. Four of the park areas are quite extensive. La Vérendrye Park, 140 miles northwest of Montreal, has an area of 4,746 sq. miles; Laurentide Park, 30 miles north of Quebec City, has 3,612 sq. miles; Mont Tremblant, 80 miles north of Montreal, 1,223 sq. miles; and Gaspesian Park, Gaspé Peninsula, 514 sq. miles. Mount Orford Park, situated 15 miles west of Sherbrooke, has an area of 16 sq. miles.

The Fish and Game Reserves together occupy more than 30,000 sq. miles. The Chibougamau Reserve and the Mistassini Reserve, both northwest of Lake St. John, cover 3,400 sq. miles and 5,300 sq. miles respectively; the Kipawa Reserve in the Témiscamingue district, 1,000 sq. miles; and the Shickshock Reserve adjoining Gaspesian Park, 314 sq. miles. The Petite Casapedia, 305 sq. miles, and the Port Daniel, 30 sq. miles, reserved for salmon and trout fishing, both lie along the Bay of Chaleur in Gaspé Peninsula, while the Mingan Reserve, largest of them all with an area of 21,000 sq. miles, lies on the north shore of the St. Lawrence River in Saguenay County.

These parks and reserves are wilderness areas of great scenic interest—for the most part mountainous country threaded with many rivers, lakes and streams and abounding in wildlife. In all of them, except Mount Orford, excellent fishing may be found and most of them have been organized to accommodate sportsmen and tourists in camps, cottages and lodges. Mont Tremblant is a famous resort area in both summer and winter and is easily reached by highway from Montreal. The Department of Game and Fisheries administers the parks and reserves, and also four salmon streams which are open to anglers.

Ontario.—The Provincial Park program in Ontario has been greatly expanded since 1955. Six areas under development at the end of that year have been increased to 115 parks and park reserves by mid-1958. In 82 of these at least minor improvements have been effected and 67 are supplied with caretaker services and with camping and picnic facilities. The four largest parks—Algonquin, Quetico, Superior and Sibley—together have an area of nearly 4,700 sq. miles. Algonquin, 141 miles north of Toronto and 105 miles west of Ottawa, was the first to be established and is the best known. It is well provided with commercial camps for children and adults and is easily accessible by road. However, the present administrative policy is to encourage the establishment of commercial recreation facilities on the park fringes and to return the park itself to its natural condition. The interiors of Quetico and Superior Parks are also being retained as wilderness areas with fringe development. Quetico Park is accessible by road through the recently developed French Lake campsite, and by water; an extension to Highway No. 17 northward from Sault Ste. Marie will give access to Superior Park; and Sibley Park may be reached by road from Highway No. 17 eastward from Port Arthur.

The parks are administered by the Parks Division of the Department of Lands and Forests, Toronto, from which detailed information is available in brochure form.

Manitoba.—There are ten forest reserve areas in Manitoba: Turtle Mountain Forest Reserve (109 sq. miles), Spruce Woods Forest Reserve (222 sq. miles), Porcupine Forest Reserve (787 sq. miles), Duck Mountain Forest Reserve (1,426 sq. miles), Sandilands Forest Reserve (570 sq. miles), Whiteshell Forest Reserve (1,088 sq. miles), Cormorant Forest Reserve (575 sq. miles), Agassiz Forest Reserve (275 sq. miles), Belair Forest Reserve (54 sq. miles), and Northwest Angle Forest Reserve (280 sq. miles). These Forest Reserves are used to some extent as recreational areas. In addition there are twenty-three areas, including the Northern Recreational Area, Amaranth Beach, Lynch Point, Pelican Lake, Rock Lake, Killarney, Seven Sisters, Pine Falls, Beaver Creek,

Wallace Lake, Bird Lake, St. Ambroise, Lundar, Beaconia, Oak Lake, Methley, Toutes Aides, Waterhen, Overflowing River, Steep Rock River, Red Deer River, Lake St. George and Moose Lake, which make up a total of 968 sq. miles of new parks and recreational areas established up to 1958.

Saskatchewan.—Saskatchewan has ten Provincial Parks with a total area of about 1,700 sq. miles. Cypress Hills, Duck Mountain, Greenwater Lake, Moose Mountain, and Valley Centre are operated as summer resorts with chalet, lodge, cabin and trailer accommodation, and camping and picnic facilities. Recreational activities include fishing, boating, swimming, golf, tennis, dancing, baseball, hiking, horseback riding, etc., and the parks are all well fitted with playground and beach equipment for children. In Cypress Hills Park, elk, antelope, deer and beaver are plentiful and brook and other trout abound in the streams and lakes. Heavy stands of tall, straight lodgepole pine provide forest cover in this area. In Duck Mountain, Moose Mountain and Greenwater Lake Parks, moose, elk, deer, bear and beaver are common as well as several varieties of grouse. Spruce, poplar and white birch provide excellent cover for wildlife. Pickerel, pike and perch are prevalent in the lakes.

Alberta.—In Alberta 37 Provincial Parks have been established by Order in Council of which 30 are being extensively developed at the present time. The Cypress Hills Provincial Park, covering an area of over 77 sq. miles, is the largest and is situated in the southeast portion of the province. The other parks under development are: Aspen Beach, Beauvais Lake, Big Hill Springs, Crimson Lake, Cross Lake, Dillberry Lake, Garner Lake, Gooseberry Lake, Kinbrook Island, Lac Cardinal, Little Bow, Little Fish Lake, Long Lake, Ma-Me-O Beach, Miquelon Lake, Park Lake, Pembina River, Red Lodge, Rochon Sands, Saskatoon Island, Steepleville Dinosaur, Sylvan Lake, Taber, Thunder, Vermilion, Wabamun Lake, Willow Creek, Winagami Beach, Woolford, and Writing-on-Stone. Picnic facilities, playground equipment and camping areas are provided in these parks, which are maintained primarily for the recreation and enjoyment of the residents of the province.

British Columbia.—There are 124 Provincial Parks in British Columbia with a total area of about 13,151 sq. miles. These parks are classified A, B, and C. Class A parks are those considered most highly for immediate recreational development and are strongly protected. Class B parks are areas slated for development—valuable wilderness areas or places set aside for a specific reason. Class C parks are intended primarily for the use of local residents and are usually under Board management. The parks are in all stages of development and dedicated to a variety of recreational uses. There are immense wilderness areas such as Tweedsmuir and Wells Gray Parks and outstanding scenic and mountain places which include Garibaldi, Mount Robson and E. C. Manning Parks. Thousands of city dwellers throng to the ski slopes of Mount Seymour or picnic at Cultus Lake Park. The formal gardens of Peace Arch are a monument to the goodwill between Canada and the United States. Vancouver Island has a chain of small forest parks that have achieved a tremendous popularity with tourists—the best known are Little Qualicum Falls and Miracle Beach. In addition there is a campsite system closely integrated with the Provincial Parks, many campsites actually being located in the parks.

Subsection 4.—The National Capital Plan

Ottawa, the city selected by Queen Victoria in 1857 to be the permanent seat of the legislature of the united provinces of Upper and Lower Canada, was designated the National Capital of the Dominion upon Confederation in 1867. The community grew out of the military and construction camp which served as headquarters for the building of the Rideau Canal—a military project carried out between 1826 and 1832 which utilized the Rideau and Cataraqui Rivers to link Kingston on the St. Lawrence River and Lake Ontario with the Ottawa River thus providing a safe interior military waterway between Lake Ontario and Montreal by bypassing the vulnerable international section of the St. Lawrence

River. Originally known as Bytown, after Col. John By, R.E., builder of the canal, the settlement prospered with the development of the lumber trade. The Act of Incorporation, changing Bytown to the City of Ottawa, was proclaimed on Jan. 1, 1855.

The city, situated in an area of great natural beauty, has remained a self-governing municipality and, although throughout the years the Federal Government co-operated with the municipal authorities in the development of a system of driveways and parks, the city expanded without the benefit of any planned direction. In 1946, however, a Master Plan was approved, designed to guide the development of the Capital's urban area over the next half-century and to protect the beauty of the surrounding National Capital District. That District covers an area of about 1,800 sq. miles, half of which lies in the Province of Ontario and half in the province of Quebec. The co-operation of the Cities of Ottawa and Hull, sixty-four other autonomous municipalities and the two provincial governments is essential to the successful implementation of the Plan. The federal agency responsible for its fulfilment is the National Capital Commission (*see* p. 109).

Projects under the Master Plan fall into four main categories: those for which the NCC is responsible, such as development of the Capital's parkway and parks system, including Gatineau Park and the relocation of the Capital's railway system; the federal building program, carried out by the Department of Public Works or other federal agencies, with the locations and exterior design of buildings subject to NCC approval; joint projects with the local municipalities in which the NCC is the federal planning and financial agency; and, finally, entirely municipal projects.

Details of the Plan are given in the 1956 Year Book at pp. 30-34, and a review of progress up to mid-1957 appears in the 1957-58 edition at pp. 26-27.

Section 3.—Wildlife Resources and Conservation

A series of special articles relating to the wildlife resources of Canada have been carried in previous editions of the Year Book. Articles on Migratory Bird Protection in Canada, Game Fish in Canada's National Parks, The Barren-Ground Caribou, Migratory Bird Legislation, Scientific Management of Game Fish in Canada's National Parks, and The Musk-ox were carried in the 1951, 1952-53, 1954, 1955, 1956 and 1957-58 editions, respectively. Reference may be made in the present edition to a short article on the fur industry that appears in Chapter XIII on Fisheries and Furs.

The Canadian Wildlife Service.*—The Canadian Wildlife Service deals with most wildlife problems coming within the jurisdiction of the Federal Government. The Service was organized in 1947 to meet the growing need for scientific research in wildlife management and is a division of the National Parks Branch, Department of Northern Affairs and National Resources. Its functions include the administration of the Migratory Birds Convention Act in conjunction with the Royal Canadian Mounted Police and in co-operation with the provincial game authorities. It conducts scientific research into wildlife problems in the Northwest Territories, Yukon Territory, and the National Parks of Canada, advises the administrative agencies concerned on wildlife management and co-operates in the application of such advice. It provides co-ordination and advice in connection with the administration of the Game Export Act in the provinces; deals with national and international problems relating to Canada's wildlife resources; and co-operates with other agencies having similar interests and problems in Canada and elsewhere.

The Migratory Birds Convention Act was passed in 1917 to give effect to the Migratory Birds Treaty signed at Washington in 1916. It provides a measure of protection for numerous species of birds that migrate between the two countries. The Canadian Wildlife Service is the federal agency responsible for administration of the Act and for the annual revision of the Migratory Bird Regulations, which govern such matters as open seasons and other waterfowl hunting details, taking and possession of migratory birds for scientific

* Prepared by the Canadian Wildlife Service, Department of Northern Affairs and National Resources, Ottawa.

or propagating purposes, eiderdown collecting, etc. The Royal Canadian Mounted Police is responsible for enforcing the Act and Regulations. In both administration and enforcement, provincial authorities co-operate with the Canadian Wildlife Service.

There are 95 migratory bird sanctuaries in Canada with a total area of over 5,000 sq. miles. A sanctuary may be established on the initiative of the Department or of a provincial or municipal government, or on petition by a private person or organization. Bird banding provides valuable information on the migration of birds and their natural history and is especially useful in waterfowl management. Serially numbered bands supplied by the United States Bureau of Sport Fisheries and Wildlife are used in Canada as well as in the United States.

An investigation of the barren-ground caribou, begun by the Canadian Wildlife Service in 1948, is continuing. The animals are found mainly in the Northwest Territories but may migrate seasonally into the three Prairie Provinces. The investigation established that too great a harvest was being taken and led to more stringent hunting regulations and more predator control and conservation education.

Other recent and current projects of the Service include long-term studies of the muskrats of the Mackenzie and Athabasca deltas and beaver surveys in wooded areas of the Mackenzie District. A start has been made on transplanting beaver from abundant to scarce areas. Damage to cereal crops by wild ducks and cranes has received intensive study. The largest remaining herd of North American buffalo or bison kept in Wood Buffalo National Park has been closely studied to determine the extent of reproduction and the effects of disease. Murres, sea birds of importance to many inhabitants of Newfoundland, are under investigation to find out how their numbers are affected by human activities. Much time has been devoted to other species greatly reduced in number or in danger of extinction, such as Ross's geese, trumpeter swans and whooping cranes.

The present research staff includes 30 university-trained wildlife biologists, stationed at various centres throughout Canada. Ornithologists are located at Vancouver, B.C. (1); Edmonton, Alta. (3); Saskatoon, Sask. (2); Winnipeg, Man. (1); Ottawa, Ont. (2); Kingston, Ont. (1); Maple, Ont. (1); Quebec, Que. (2); Sackville, N.B. (2); and St. John's, Nfld. (1). Mammalogists are stationed at Yellowknife (2); Fort Smith, N.W.T. (2); Aklavik, N.W.T. (1); Whitehorse, Y.T. (1); Edmonton, Alta. (1); and Ottawa, Ont. (5). Limnologists are located at Banff, Alta. (1); and at Winnipeg, Man. (1). A number of university graduates and under-graduates are engaged annually to assist in summer field work. The Ottawa headquarters includes an administrative staff of about 30 in addition to supervisory research officers. About 25 part-time Migratory Bird Wardens and Sanctuary Caretakers are employed.

PART III.—CLIMATE AND TIME ZONES

Section 1.—Climate

The following article is a comprehensive study of the climates of Canada, specially prepared by the Meteorological Branch of the Department of Transport. Considerations of space make it impossible to include in this edition the detailed tabulations of climatic factors for individual meteorological stations but these will appear in the 1960 Year Book. In the meantime, the following article on Climate, together with detailed tables for 45 stations, will be made available in reprint form. The history and functions of weather observing stations in Canada are dealt with at pp. 51-52.

THE CLIMATE OF CANADA*

Canada is a land of many climates. Frigid wind-swept barrens, hot sun-ripened grain fields, dusty scanty grasslands and wet heavily forested slopes are all part of the Canadian landscape. Each is largely a product of past and present varied climates and in turn the

* Prepared under the direction of Andrew Thomson, Director of the Meteorological Branch, Department of Transport, Toronto, by C. C. Boughner and M. K. Thomas.

characteristics of each different surface play their part in modifying today's weather and climate. A few centuries ago the shores of this country seemed to be a cold inhospitable wilderness of forest and rock, but subsequent settlement and development have shown the Canadian climate to be enduring, liveable and even enjoyable. None of the climates has the genial qualities of those in more tropical latitudes; in fact, most of the population lives in a changeable weather zone known to develop some of the more energetic peoples of the world. The forbidding bleakness of the northern lands has acted as a deterrent to economic development and even more to settlement in those regions. However, it may be that in meeting this challenge Canadians, assisted by modern technology, will find the north no more an inhospitable wilderness than the south has proved to be.

Considering the extent of the country and the location of Canada on the globe, great variability in weather and climate might be expected. Stretching through nearly 90 degrees of longitude, the country consists of a sector which extends from within a few hundred miles of the North Pole south to latitude 42 degrees. Bordered by oceans on the east, west and north, and by the Great Lakes as part of the southern boundary, Canada has also an exceedingly long land boundary between it and the United States.

There are many interesting and exceptional facts about the Canadian climates, but they are by no means unique in the world. In general the climates of the southern portion of Canada may be compared to those across the breadth of Europe and Asia. The moderate temperatures and abundant precipitation of the Pacific Coast of British Columbia are somewhat similar to the climates of the coast of Norway; Vancouver weather, for instance, is similar to that near Bergen. However, the protected and sheltered climate of Victoria is more like that experienced in the low countries of Belgium and Holland. Moving eastward, the dry continental-type climates of Canada's Prairie Provinces are roughly comparable to the central regions of European U.S.S.R. For example, the climate of Calgary is not unlike that of an area north of Moscow. Further to the east across the continents and into more humid regions again, a climate similar to that at Ottawa is found at Harbin in Manchuria. Coastal Nova Scotia has its climatic counterpart in the northern Japanese island of Hokkaido. Finally, while the climate of the Canadian Arctic has the same characteristics as that of the U.S.S.R. Arctic, the cold pole of the eastern hemisphere in Siberia has winter temperatures that average much lower than any in Canada.

CLIMATIC CONTROLS

Located in the northern half of the hemisphere, the lands of Canada annually lose more heat to space than they receive from the sun. At the same time low latitude tropical countries are receiving more heat than they lose. To compensate for this, and to maintain a heat balance over all the earth, a general atmospheric air circulation regularly transfers heat poleward. This air movement, known as the "general circulation", undergoes seasonal variations and is broken into latitudinal belts or cells known from equator to pole as the doldrums, the easterly trade winds, the high pressure belt, the prevailing westerlies and the polar easterlies. Most of Canada lies in the zone of the westerlies; the polar easterlies are not well developed in this hemisphere and only occasionally in summer does southeastern Canada come under the direct influence of the Atlantic high pressure cell.

The general movement of air from west to east over Canada in the westerlies zone is not nearly as persistent as the winds in other circulation belts such as the trade wind zone. Migrant low pressure areas move across Canada in the westerlies stream causing the air to blow around them in an anti-clockwise direction while anticyclones or high pressure areas produce a clockwise circulation as they too move from west to east. The movement of these high and low pressure areas is associated with the constant struggle taking place over North America between cold air attempting to surge down from the north and warm air trying to flow up from the south. This inter-action produces low pressure areas while the boundary line between the contrasting air masses is known as a weather "front". Large areas of cloud, precipitation and generally poor weather usually accompany these low pressure areas and fronts.

The movement of the migrant pressure systems within the zone of the westerlies is a most significant climatic control over Canada. In winter, frontal activity is generally more complex and intensive, producing more periods of bad weather and extremely variable temperatures. Low pressure areas move eastward or northeastward over southeastern Canada and off the Continent every two or three days, while along the Pacific Coast the effects of successive frontal systems are felt equally as often. The Alberta area in the lee of the mountain ranges collectively known as the Western Cordillera is frequently the breeding ground for new storms which then move eastward across the country. Winter in the Arctic and the northern interior portions of Canada is usually not as stormy as it is in the coastal and more southerly sections. Large high pressure areas consisting of very cold dry air tend to build up and then surge down over interior and eastern Canada to the rear of low pressure areas.

While in the winter season the cold high pressure areas dominate the interior of the Continent, in summer the large semi-permanent high pressure areas over the north Pacific and Atlantic Oceans become the dominating features of the general circulation in this part of the world. The paths of the migrant low pressure areas over the Continent are then farther north and the storms are usually less intense than in winter. Along the Pacific Coast the frontal systems strike the coast farther north and less often while in eastern Canada the frequency of the stormy frontal systems is greatly reduced. Over the central interior and eastern Canada much of the cloud and precipitation of this season is of convective origin as the land heats under the summer sun.

Although the general circulation of the atmosphere is the controlling factor over the Canadian climate, it should be understood that the physical geography of North America contributes greatly to the general pattern. If the shape of the continental land mass were different the general patterns of air flow would similarly be different than they are. Also, the physical geography of the Continent greatly modifies the effect of the general circulation and produces a variety of climates in Canada that would not be expected from the general circulation alone.

The presence of the Western Cordillera has a great effect on the climate of western Canada. These mountains limit the humid and mild air from the Pacific to a narrow band along the coast, despite the general westerly circulation. As the air is forced aloft over the successive mountain ranges, it is compelled to give up its moisture, becoming relatively dry and warm by the time it flows over the prairies. Were it not for the Cordillera, a humid, moderate temperature type of climate would extend for hundreds of miles into western Canada. On the other hand, the mountains physically block the occasional westward-moving outbreaks of cold Arctic air which would otherwise reach the coast from the north and east.

East of the Cordillera and extending from the Arctic Ocean across Canada and the United States to the Gulf of Mexico lies a broad, relatively flat corridor. Consisting of Arctic barrens and boreal forests in the north and agricultural lands in the south, this corridor presents no obstacle of importance to the movement of large air masses from either the north or south. Warm moist air from the Gulf of Mexico is able to flow northward providing the ample precipitation of southeastern Canada while massive cold air outbreaks from northwestern Canada are able to plunge southward and eastward without encountering any physical barrier. It is this north-south corridor open to rapid air flow from either direction that makes interior Canada so vulnerable to sudden and drastic weather changes.

On the other hand, the large water surfaces of central and eastern Canada produce a considerable modification in the climate. In summer Hudson Bay provides a refrigerating effect to areas on the lee side, and its effect is also quite pronounced in autumn and early winter before the Bay freezes over, when the east shore is much warmer and snowier than it would be otherwise. Since a large percentage of Canada's population lives in the region of the Great Lakes the effect of these lakes on the climate of southern Ontario is, perhaps, more apparent. Winters are milder with more snow in southwestern Ontario, while in summer the cooling effect of the lakes is well illustrated by the number of resorts along their shores. To a lesser degree the smaller lakes in interior Canada modify the climate but only of the adjacent shores.

The mountains and highlands of the Eastern Cordillera are much lower than those of the Western Cordillera and, furthermore, since they are located on the east side of the Continent in the westerlies zone, their effect on the climate is relatively slight. In southeastern Quebec and in the Ungava-Labrador region there is evidence of increased precipitation along the westward slopes and decreased precipitation and slightly warmer temperatures on the eastward lee slopes. Compared to that caused by the Pacific, the Atlantic Ocean has little effect on the climate of Canada. Occasionally there is an extensive circulation of moist cool air over eastern Canada from the Atlantic but these are abnormal situations. Of course, the coastal areas of the Atlantic Provinces do have modified temperatures and increasingly humid conditions when the winds blow inland from the ocean. Mention should also be made of the cold Labrador Current which maintains Arctic-like conditions along the Labrador coast and is responsible for the extensive areas of fog and low cloud over and off the Atlantic Provinces in spring and early summer.

CLIMATIC REGIONS

Before beginning a detailed study of the provincial and territorial climates, it might be well to examine the basic climatic features and the various climatic regions of the country.

Mean temperature maps of Canada during the summer and winter seasons are quite dissimilar in appearance. Apart from the obvious difference of higher mean temperatures in summer, the January and July maps (Figs. 1 and 2) have different basic patterns. In winter the coastal areas are much warmer than the interior for the same latitudes producing isotherms with a concave pattern over the country. In summer when the continental land areas are warmer than the oceans the isotherms have a convex appearance. It should also be noted that the latitudinal thermal gradient, or difference in temperature from north to south, is considerably greater in winter than in summer. The coastal areas, of course, show the least change in mean temperature from January to July, 20° to 25°F. on the Pacific Coast and 40°F. on the Atlantic Coast, while the Mackenzie River area of the northwestern interior and the northwestern Arctic islands have the greatest range of between 70° and 80°F. The eastern Arctic does not have nearly as warm summers as those in comparative latitudes in the interior, nor are the winters as cold, so the range between January and July is reduced to 60°F.

Considering temperature extremes, Canadian data are much more impressive regarding low temperatures than high. Temperatures lower than -40°F. have been experienced in all but the coastal areas and the southern extremities of the country. While the North American record of -81°F. was established at Snag in the Yukon Territory, temperatures lower than -60°F. have been reported from all but the Atlantic Provinces. The highest official temperature in Canada was 115°F. reported from Alberta and a sizeable portion of the southern interior of the country has had temperatures of over 100°F. Mention should also be made of heating degree-days, a concept useful in estimating fuel consumption. A study of these units reveals both the severity and duration of cold weather in northern Canada. Computed to a base of 65°F., heating requirements in southern British Columbia, southern Ontario and Nova Scotia are generally less than 8,000 degree-days annually, but this value increases to 16,000 in the Hudson Bay region and to 24,000 at the extreme northern edge of Canada. With further reference to temperature it must be remembered that in the presence of strong wind speeds the sensible temperature is much lower than the actual temperature. Computation of a value known as the wind-chill factor reveals that these factors, based on wind speed and temperature, are higher to the west of Hudson Bay than in most other areas with Arctic climates.

More precipitation could be used to great advantage in agriculture and forestry over a large portion of Canada. Generally speaking, areas with less than 20 inches a year (Fig. 3) in the southern half of the country are sub-humid, while all Canada, except perhaps the coastal regions, could beneficially use more summer rainfall in a normal year. Precipitation is not equally distributed; while the Pacific Coast averages more than 80 inches annually, the prairies have 15 inches and the Arctic less than 10 inches. Precipitation is greater in

the east, increasing from 30 inches in Ontario to 50 in Nova Scotia. Seasonal distribution is also dissimilar. While the Pacific regions expect the winter to be their rainy season, the prairies and the Arctic get most of their precipitation in summer. The seasonal precipitation regime is much more uniform over eastern Canada although the Maritime Provinces may expect a slight autumn and early winter maximum.

Snow is common to the entire country but, except for areas of heavy fall in the mountains of British Columbia, mean annual snowfall is heavier in eastern than in western Canada. The snow cover season is quite long in interior Canada; in fact the northern interior half of the country is usually snow-covered for longer than six months each year. Freezing precipitation may occur during the colder months in any part of the country and it occasionally seriously disrupts transportation and communications in southeastern Canada. Cloudy weather and the lack of sunshine are common across the country in winter but are most pronounced along the northwest Pacific Coast.

In spring, wind speeds are usually at their maximum and southern interior areas may unfortunately experience a few tornadoes each year in late spring and early summer. Fog is also more common in the Atlantic Provinces during this season. Thunderstorms are essentially a summertime phenomena over the southern interior and southeastern Canada. High sensible humidity conditions may be at their worst in midsummer accompanying high temperatures. These sultry conditions are most often felt in southern Ontario but usually the spells last only a few days at a time. The southeastern coast may be affected by one or more hurricanes in the early autumn but usually the centres of these storms pass to the south giving this portion of Canada abundant rainfall and high winds. Upon occasion though, a hurricane will pass directly over Canada as far west as Ontario with serious damage from wind, rain and floods.

Considering climatic controls and the basic features of the climate referred to above, it is possible to divide Canada into six general climatic regions—Arctic, Northern, Pacific, Cordillera, Prairie and Southeastern. It should be remembered that except for mountainous dividing lines the regions are really divided by broad transition zones and not by sharp lines as shown for convenience in Fig. 4. The classification used is not mathematically precise but it does take into consideration some of the basic Köeppen and Thornthwaite concepts.

The *Arctic* climatic region is that part of the country north of the July 50° isotherm. This line, extending from Aklavik to Churchill around Hudson Bay and down the Labrador coast, corresponds in general to the northern limit of tree growth. In this region there is no summer as that season is known in southern Canada. The northwestern part of the region is the true desert area of Canada while on the other hand sufficient moisture is available on the large eastern islands to maintain small ice caps. Snowfall is relatively light but it blows, drifts and packs to a degree unknown in southern Canada. Continuous darkness and/or twilight during the long winter season is also a major factor in making this region so inhospitable. Surprisingly, Canada's record low temperatures have not been observed in this region. There is just enough heat transmitted through the ice over the Arctic seas to slightly modify the winter temperatures, although sub-zero conditions certainly have a longer season in this region than in any other.

But for the possible connotation of the word, the *Northern* climatic region might well be called the sub-arctic. Bordered on the north by the Arctic tundra, this region consists of a broad band from the interior northwest of the country, south of Hudson Bay to the Great Lakes including most of Quebec and Labrador. The region consists of sparse, lightly treed barren lands in the north and the more heavily forested native boreal forest in the south. It is in this region that appreciable snow cover lasts for more than half the year, especially in the northeastern section. Extremely low temperatures occur every winter throughout most of the northwestern section, and very hot temperatures may occur in summer. Precipitation is light in the northwest—in fact, this section is sub-humid—but there is ample in most of the southeastern portion. The central Quebec-Labrador portion has more snow each winter than any other comparable area in Canada.

The absence of good soil, the shortness of the growing season and, in the northwest, the lack of sufficient moisture prevent this climatic region from extensive agricultural exploitation.

The *Pacific* climatic region consists of the islands and a narrow coastal belt of British Columbia, nowhere extending more than 100 miles and frequently only a few miles inland. In this classification the limiting eastward factor is the January isotherm of 32°. Mild winter and cool summer temperatures are ensured by the general circulation from the west off the ocean. Temperatures rarely drop below zero in winter or rise above 90°F. in summer. With a winter season maximum this region is rainier than any other in the country. As the frontal systems impinge on the mountainous coast, the moist air is forced to rise producing precipitation that averages over 80 inches annually with a maximum of 262 inches at one station. However, there are "rain shadow" areas such as at Victoria where annual precipitation is less than 30 inches. Native vegetation is the dense coastal forest.

Extending in a north-south belt through most of British Columbia and Yukon Territory is by far the most complex climatic region of Canada—the *Cordillera*. In this region of mountains, plateaux and valleys, altitude is usually more of a climatic determinant than latitude. Considering the rugged terrain of the country, it is almost impossible to map the climate accurately except on the most open scaled maps. Furthermore most of the available data are from valley stations. In general, however, precipitation decreases eastward from the Pacific region especially in the lee of the successive mountain ranges. Inversely, temperature variability and severity increase as the mountain region is traversed to the east. In this region diurnal temperature variations are greater than anywhere else in Canada. Summers in the southern interior mountain valleys are hotter than any location on the prairies but the northern portions are much cooler. Along some sheltered narrow valley stretches, true desert-like climate exists. Except in these dry areas and on areas of sheer rock the native vegetation is boreal forest in the north with sub-alpine and mountain forest in the south.

The *Prairie* climatic region takes in almost all the settled agricultural land of Manitoba, Saskatchewan and Alberta with the exception of the Peace River country. This native grassland is bordered on the west by the foothills of the Cordillera climatic region and on the north and east by the Northern region. Division from the latter region is along a "bridge", or slightly heavier parkland precipitation belt, extending to the mountains between the drier prairies and the northern lands. The prairie precipitation regime shows an early summer maximum which is, indeed, advantageous for agriculture. Total annual precipitation is normally light, especially in the South Saskatchewan River basin. The Prairie region is well known for two weather phenomena—the "blizzard" and the "chinook". Occasionally when the region is covered with bitterly cold Arctic air the general circulation will begin moving this air to the east and it is replaced by warm dry air subsiding in the lee of the mountains. This warm air invasion, which sometimes brings temperature increases of 40° to 50°F. is seldom felt east of southwestern Saskatchewan. Also in the wintertime and produced by intense frontal systems, bitterly cold temperatures with driving snow and high winds combine to produce the prairie blizzard. Such storms often bring outdoor activities to a halt for days.

The sixth and last general climatic region may be called the *Southeastern* region and takes in southern Ontario and Quebec along with the Atlantic Provinces of New Brunswick, Nova Scotia, Prince Edward Island and the island portion of Newfoundland. Winter in this region is shorter than in the adjoining Northern region, and summer, in the interior at least, may be quite warm for Canada. Reference has already been made to the great moderating effect of the Great Lakes over southwestern Ontario. This effect is scarcely noticeable in southeastern Ontario and in southern Quebec where winters may be much more severe. Temperatures in the interior of New Brunswick are similar to those in Quebec but the other Maritime areas are modified to an extent by the ocean and its embayments, especially in summer. Precipitation is ample in this region and increases from 30 to 35

inches in Ontario eastward to 50 inches in coastal Nova Scotia and Newfoundland. This abundant and reliable precipitation results from the frequent passage of frontal systems over southeastern Canada.

PROVINCIAL AND TERRITORIAL CLIMATES

British Columbia and Yukon Territory

This vast area extending from below latitude 49°N. to beyond the Arctic Circle is also one of diverse relief with elevations ranging from sea level to nearly 20,000 feet. Although 75 p.c. of the Province of British Columbia is more than 3,000 feet above sea level, nearly all settlement is on the floors and lower slopes of the valleys; consequently most of the available climatic data have been derived from low level stations. In the Yukon Territory, which has an area of more than 200,000 sq. miles, meteorological knowledge is confined to records from two dozen official weather reporting stations, of which some have records for only a few months. Three stations only—Dawson, Carcross and Mayo—have records extending back more than fifteen years.

Although it is possible to divide the area into broad climatic regions, the effects of altitude, topography and slope are of primary importance and significant variations in climate often occur within very short distances.

British Columbia Coast and Coastal Valleys.—This region includes the coastal islands, the coast, coastal valleys, west slopes and uplands of the coastal mountains. The coastline of British Columbia, in the sense of low-lying land fringing the sea, is narrow but it is indented with innumerable fiords some of which extend into the heart of the Coast Range, and with deep-cut river valleys of which several cut through the coastal mountains into the interior.

As the result of prevailing westerlies and the warm waters of the Pacific, the main climatic characteristics of the West Coast are the mild winters, warm but not hot summers, and small range of temperature. Although the whole area has the same broad climatic features, significant differences occur between the windward and leeward sides of the Coast Mountains, between the inner and outer sections of the fiords, and to a lesser degree with latitudes. In some of the valleys extending through the Coast Range, a complete transition from maritime climate at the mouth to continental climate in the interior takes place. Gales are frequent especially during the winter at exposed locations along the West Coast. The average wind speed, although noticeably higher than in the interior, is not high for an ocean coastline facing the westerlies. Topography exerts a strong influence on wind direction. Calms are rare along the open coasts and land and sea breezes are noticeable especially during the summer.

The West Coast is sheltered by the Coast Mountains from winter cold waves of polar air that sometimes penetrate into the interior of the province from the north and east. Uncomfortable heat in summer is unusual on account of the cool sea breezes which are likely to set in as soon as the land begins to warm up appreciably. As a result, temperatures seldom fall below zero in winter or rise above 90°F. in summer except far back from the coast. The dominating control of temperature by the ocean is indicated by the small variation from north to south over a distance of 500 miles along the Pacific Coast of British Columbia. The winters are mild as evidenced by January mean temperatures of 30° to 40°F., while in July mean temperatures do not exceed 60°F. at most coastal stations. The transition seasons are long drawn out as is illustrated by the fact that at Victoria the mean temperature rises less than 10°F. from March to May and falls only 12°F. from September to November.

The longest average frost-free season in Canada occurs along the coastal areas of British Columbia. The extreme southeastern tip of Vancouver Island enjoys a frost-free season of more than eight months. Generally, along the coast of Vancouver Island, along the immediate coast of the mainland, and on the small off-shore islands, the frost-free season exceeds 200 days. Shorter growing seasons occur where the maritime influences are reduced

by lack of protection from outbreaks of cold air or by elevation. Victoria (Gonzales Observatory) is the only official weather station in Canada that has experienced a winter season during which the temperature in the thermometer shelter at no time fell to the freezing level.

Frontal and orographic influences combine to increase the general rainy tendency of the West Coast, and the windward slopes of the littoral of British Columbia have precipitation among the heaviest in the world. The precipitation regime is characterized by wet winters, small proportions of snow at low levels, a large number of days with precipitation and a well-defined summer season minimum. Near sea level, wet snow that soon melts falls on a few days during most winters, but the Insular, Coast and Cascade Mountains receive an enormous amount of snow. A recently established weather station at Kildala Pass (elevation 5,280 ft.) in the Coast Mountains, southeast of Kitimat, reports an average seasonal snowfall of 809 inches. Thirty-nine inches of snow have fallen during a 24-hour period at this station and during one winter the total fall reached 880 inches.

The wet season begins late in September and ends about the middle of March along the West Coast. In contrast there is a marked dry season during the summer months. The heaviest rainfall occurs on the outer coasts of Vancouver Island, the Queen Charlotte Islands and on the mainland coast northward from Vancouver Island to the Alaskan Panhandle where the average annual precipitation is in excess of 100 inches. Exposure to the open ocean and local orographic influences often produce exceptionally heavy rainfall. Henderson Lake, which is situated at the head of a funnel-shaped valley at the end of an arm of Barkley Sound on the outer coast of Vancouver Island, holds the record for annual precipitation on the North American Continent. Precipitation records for this station include:—

Average annual total precipitation for a 14-year period.....	262.00 inches
Greatest total precipitation for one calendar year (1931).....	323.70 inches
Average total precipitation during the wettest month (December)...	46.70 inches
Total precipitation during the wettest month on record (Dec. 1923)...	79.45 inches
Greatest precipitation in one day (Dec. 30, 1926).....	16.61 inches

Despite the heavy winter precipitation, this station has the characteristic relatively dry summer with a total fall for the months of June, July and August averaging only a little over six inches per month.

Stations in the lee of the Coast Mountains show a remarkable reduction of precipitation. The effectiveness of the rain shadow of the Insular and Olympic Mountains is illustrated by the fact that Victoria receives only 26 inches a year in comparison with 40 inches at Vancouver Airport on Sea Island across the Strait of Georgia. At higher elevations on the eastern slopes of Vancouver Island, the annual precipitation is fairly high, averaging 64 inches at Lake Cowichan (elevation 580 ft.) as compared to 34 inches at Cowichan Bay (elevation 175 ft.).

Along the southwestern coast of the mainland, annual precipitation is slightly in excess of 35 inches on the outer islands of the Fraser Delta, but even at moderate elevations on the mountainous slopes to the north of the Fraser River there are substantial increases in precipitation. The seasonal regime of winter maximum and a very pronounced summer minimum is characteristic of the coastal area. At Vancouver Airport only 6 p.c. of the annual total falls during the summer months of July and August, and this produces an acute moisture deficiency during summer months. An extreme case occurred during the summer of 1951 when no measurable rain fell at Vancouver Airport during a period of 58 days (June 14 to August 10). Thunderstorms are very infrequent along the West Coast of British Columbia.

The littoral of British Columbia, and particularly the outer coast, is heavily clouded everywhere in autumn and winter. The less exposed districts, including the east coast of Vancouver Island and the Fraser Valley, have notably bright skies in summer. Victoria receives nearly 2,100 hours of bright sunshine each year, a record exceeded in Canada only on the southern prairies. On the other hand, Prince Rupert receives slightly less than half this amount.

Southern Interior of British Columbia.—The southern interior of British Columbia may be subdivided into west and east. The western portion, lying between the Coast Range and the Cascade Mountains on the west and the Columbia Mountain system in the east, is an area composed of deep valleys running in a general north-south direction entrenched in the Low Plateau having an average elevation of 4,000 feet. The eastern subdivision is characterized by the Monashee Mountains, the Selkirks and other rugged lofty uplands, divided by narrow valleys and picturesque lakes. The climate is continental, milder in the west than in the east. Winters are cold and the general north-south trend of the valleys frequently allows cold air masses from northern British Columbia to drift southward. There are also occasions when extremely cold air may enter from Alberta either by passing through the passes in the Rockies or by subsidence of the higher levels of a cold wave from the prairies. Even in the valleys, the ground is usually snow-covered during part of the winter.

Temperatures rise rapidly in March and spring is bright, dry and bracing. Summers are warm, with frequent hot days but with cool and occasionally cold nights. Precipitation is light and, in contrast to the West Coast region, is fairly evenly distributed throughout the year. Most of the winter precipitation is in the form of snow; while in summer heavy showers or thunderstorms provide much of the rain. The showers are usually of short duration and summer is a season of bright weather in contrast to the rather cloudy winters. Annual sunshine totals in the Southern Interior average about 2,000 hours with the average July day receiving about ten hours as compared to slightly less than two hours per day in December, the dullest month of the year.

In the valleys the wind usually blows along the valley and thus, is generally north or south. Calms are frequent in the deep valleys, particularly during winter nights. Mountain and valley winds tend to reinforce the up-and-down-valley movement of air.

Increasing "continentality" toward the east and the effect of altitude are controlling factors on the temperature regimes in the southern interior. The Okanagan and neighbouring valleys are famous for their orchards. Despite the scanty precipitation, irrigation is possible in most places by utilizing water from the numerous mountain streams. The warm summers with fairly low humidity are a distinct climatic advantage for fruit growing though the liability of spring frosts presents a serious hazard. Despite the fact that average daily minimum temperatures rise above the freezing point by Mar. 20 in the southern portions of the Okanagan Valley, and at the northern end of Okanagan Lake by Apr. 1, night frosts may occur for several weeks after these dates. The frost hazard is ameliorated in many localities by topography but on clear nights with intensive radiational cooling, frosts may cause much damage especially on low ground with poor air drainage. As an aid to the fruit growers, a special Frost-Warning Service is provided by the Canadian Meteorological Service during the spring months and frost warnings are broadcast by radio stations early each evening. When frost is predicted, oil or coal-fired heaters spaced throughout the orchards are used to provide a protective smoke screen and also to produce air turbulence, thus mixing the cold surface air with warmer air at tree-top level. More serious than the spring frosts are rare spells of abnormally cold weather in winter which cause winter killing of the fruit trees against which there is no protection.

Nearly all valley stations have mean daily maximum temperatures in the 80's during July, but cool nights give a large daily range and rather low daily means. The result is that few stations have mean temperatures much above 70°F. for the warmest summer month. Oliver at the southern end of the Okanagan Valley has a July mean temperature of 72°F., while Vernon in the north has 69°F. Corresponding January mean temperatures are 25°F. and 23°F. Most valley stations have recorded summer temperatures above 100°F. In fact, 112°F. has been reported at both Lillooet and Chinook Cove. Mid-winter minima have exceeded -30°F. at most stations and the mercury has fallen to -49°F. at Princeton. Old Glory Mountain at an elevation of 7,700 feet (the highest weather station in Canada) has had an extreme minimum temperature of -30°F. and an extreme high of 72°F.

Throughout the southern interior valleys the frost-free season generally ranges from 60 to 140 days. Extreme cases are McCulloch—20 days, and Keremeos and Warfield (Trail)—184 days. These wide variations demonstrate the importance of local factors such as air drainage, elevation, exposure to invasions of cold air or, on the other hand, the presence of bodies of water sufficiently large to ameliorate the temperature or to produce a protective blanket of fog on radiation nights.

Scanty precipitation is the outstanding climatic characteristic of the southern interior valleys of British Columbia. Movement over the Coast Ranges condenses much of the water vapour from the moist lower layers of the westerlies but the air which reaches the interior is not especially dry since the mountains are only of moderate height and substantial volumes of air penetrate through the deep valleys and over the lower parts of the ranges. In general, the western slopes of the minor uplands receive considerable precipitation but little falls on the leeward slopes and in the valleys. Each time this process is repeated, windward slope precipitation decreases until it increases again in the high Selkirks.

Precipitation in the interior valleys of southern British Columbia is fairly evenly distributed throughout the year since the region represents a transition belt between the West Coast type with winter maximum and the continental type of central Canada with the pronounced summer maximum. Maritime influence with winter maximum is pronounced in the higher and more exposed locations particularly in the western interior valleys. Continental effects are more evident in the lower elevations where the summer maximum occurs. One of the two driest areas in southern Canada extends up the Thompson River Valley from Spences Bridge to Kamloops and down to Merritt (Ashcroft 7.4, Tranquille 9.1, Kamloops 10.1, and Merritt 9.0 inches); the other is in the southern parts of the Okanagan and Similkameen Valleys (Oliver 9.8, Keremeos 10.3 inches). The Rocky Mountain trench is in another prominent rain shadow with less than 15 inches of precipitation (Invermere 11.5 inches). On the other hand the westward slopes of the Selkirk Mountains have the highest precipitation in the interior of British Columbia.

In the valley bottoms the winter snowfall usually ranges from 30 to 50 inches and the fall increases to 80 to 150 inches at recording stations on the west slopes and tops of the uplands. At Glacier (elevation 4,094 ft.) in the north Columbia basin, the winter snowfall averages 342 inches. Even in southern British Columbia, heights above 6,000 feet are snow-covered all year.

Central Interior of British Columbia.—The central interior region comprises an area about 350 miles long and 250 miles wide; stretching eastward from the Coast Range it includes the Skeena River valley and the upper portions of the Fraser and North Thompson Valleys. East of the upper Thompson River this division contains the Cariboo country and the northern portions of the Monashee and the Selkirk Mountains. The central interior region has a more uniform climate than the southern interior and is characterized by long cold winters, often intensely so when continental polar air sweeps down from the north. Summers are short and much cooler than in the south. Precipitation is not heavy.

Temperatures in the valleys of the central interior are quite similar to those recorded at upland stations in the southern interior. Most stations have at least five months with mean temperatures below freezing while the warmest summer month generally does not exceed 60° F. The long winter nights are often very cold and even most valley stations have recorded temperatures below -50° F. Quite high maxima may occur during the long summer days with maximum temperatures over 100° F. reported occasionally. Quesnel has had an absolute maximum of 105° F. The frost-free season is short, ranging from 50 to 70 days in the upper Skeena Valley, but varies from 35 to 100 days in the upper Fraser River basin.

The precipitation pattern in the central interior is quite similar to the south but reflects the simpler relief. The rain shadow immediately east of the Coast Mountains is very prominent. Kleena Kleene, situated only 120 miles from the Pacific, has a mean annual precipitation of only 14 inches but some parts of the Chilcotin uplands probably receive as much as 30 inches. Farther eastward the rain shadow in the deep Fraser Valley

between Prince George and Lillooet reduces totals to less than 20 inches. As the land rises again on the Cariboo Highlands precipitation increases to 44 inches at Barkerville and probably more in the Columbia Mountains, only to decrease again to 18 to 30 inches with the descent into the Rocky Mountain Trench. Precipitation is fairly evenly distributed throughout the year although spring is definitely the driest season and summer and autumn the wettest. Snow normally falls in all the months from September through May.

Northern British Columbia.—This section includes that part of the province lying roughly north of latitude 55°. West of the continental divide the region is one of varied relief including several distinct mountain ranges and associated valleys. The extreme northeastern portion of the province lying east of the Rocky Mountains comprises the Fort Nelson and Liard River basins in the north, separated from the Peace River basin to the south by a drainage divide rising to 4,000 feet. The whole area is characterized by long cold winters and short cool summers with only moderate precipitation. January mean temperatures are only slightly above zero in the northwestern section. Summer temperatures are among the lowest recorded in the province with July mean temperatures of 54°F. at Atlin and 57°F. at Finlay Forks. In the Peace River Valley, January temperatures average about 5°F. with mean July temperatures of 60°F. Northward in the Fort Nelson River Valley winter temperatures are ten degrees colder, while in July mean temperatures are quite similar in both valleys.

It is very difficult to assess frost data in northern British Columbia since an outbreak of polar air may occur at any time during the summer and produce freezing temperatures. The records also show striking differences between stations on the open plateau and those in mountain valleys. The available records show growing seasons ranging from 30 to over 100 days in northern British Columbia.

East of the Coast Range in northwestern British Columbia precipitation is light, averaging 11 inches at Atlin and 15 inches at Dease Lake, and increasing slightly eastward to 17 inches at Finlay Forks. Throughout the northeastern section of the province east of the continental divide available statistics indicate annual precipitation varying from 15 to 18 inches with a definite summer maximum.

Yukon Territory.—The Yukon Territory is a rugged land of plateaus and mountain ranges, cut off from the Pacific by the Coast and St. Elias Mountains which provide a strong barrier to the maritime influences from the Pacific. On the east the Mackenzie Mountains provide less defence against the winter cold waves from the Northwest Territories. Between these two mountain systems lies the Interior Plateau, a rough irregularly rolling upland with an average elevation of 4,000 feet but with large areas exceeding 5,000 feet and isolated mountains reaching 6,000 feet. Cutting through mountains and plateaus are numerous river valleys, some with flat bottoms and sloping sides; others are deep narrow gorges with the sides rising precipitously.

The whole region is north of latitude 60° and part is beyond the Arctic Circle. In winter even in the south the days are short with no effective sunshine. In summer long hours of daylight promote rapid growth where suitable soil is available. In comparison with the Mackenzie Valley, winters are remarkably mild in the Yukon Territory. Even though the oceanic influences are modified by the mountain barrier, winters are much milder in the southwest than in the interior. January mean temperatures are 5°F. at Whitehorse and -2°F. at Teslin. Comparative figures are -7°F. at Watson Lake and -16°F. at Dawson. On the other hand, topography favours extremely low minimum temperatures during Arctic cold waves. Snag holds the record for North America—-81°F. on Feb. 3, 1947. Other minimum records are -62°F. at Whitehorse, -63°F. at Teslin, -73°F. at Mayo and -74°F. at Watson Lake. Fortunately, periods of intense cold are usually of short duration. The Yukon Territory is subject to wide variations in temperature during the winter depending on whether the dominant influence is modified air from the North Pacific or intensely cold air from the Beaufort Sea. This is illustrated by a comparison of January mean temperatures at Dawson

which have ranged from -43°F. in 1909 to 7°F. in 1926. The transition period from winter to summer and vice versa is remarkably short in the Yukon Territory, the rapid change in daily temperatures reflecting the changing altitude of the sun. At Dawson mean temperature rises from 28°F. to 57°F. between mid-April and mid-June. Summers though short are pleasantly warm with all stations reporting mean temperatures above 50°F. during the three months June, July and August. The long days and high sun during June result in the mean temperatures for June exceeding the mean for August. The highest temperature on record in the Yukon Territory is 95°F. at both Dawson and Mayo. The frost-free season is short, ranging from 21 days at Pine Creek Experimental Station to 85 days at Watson Lake. Freezing temperatures have been reported every month of the year at all stations except Frances Lake and Watson Lake.

Mean annual precipitation is remarkably uniform over most of the Yukon Territory ranging from 9 to 17 inches at the valley stations for which records are available. Orographic effects are noticeable in the distribution of precipitation in this rugged country. There is no pronounced wet or dry season although at most stations July and August are the rainiest months and spring has least precipitation. Winter snowfall averages 40 to more than 80 inches with the heaviest falls in the Liard Valley, in the St. Elias Mountains and on the westward slopes of the Mackenzie Mountains. Snow usually lies in the valleys from mid-October till early April. The snow and ice fields of the St. Elias Mountains provide an important source of water for the rivers in the southwestern part of the Territory.

The Prairie Provinces

Bounded on the west by the mountains and foothills of the Rockies, the whole of the three Prairie Provinces consists of vast plains, deeply cut by river valleys and gently sloping towards the east and northeast. Despite the general uniformity of the prairies, there are numerous minor uplands, such as the Buffalo Mountain, Pasquia Hills, Porcupine Mountain, Duck Mountain, Riding Mountain, Turtle Mountain and the Cypress Hills, rising from 1,000 to more than 2,000 feet above the surrounding plain. However, the western mountains, forming as they do a fairly effective barrier to the maritime influence of the Pacific and at the same time leaving the area exposed to the inflow of cold Arctic air masses from the north, are more effective as a climatic control than the actual topography of the prairies.

Since there are no natural physical features sufficiently prominent to materially affect the climate in the Prairie Provinces, the natural vegetation regions serve as an indication of the general climatic regimes. In the south, a triangle with its base on the International Boundary and its apex about 52°N. , the prairie grassland, is a semi-arid area with hot summers. Surrounding the grasslands are the parklands, generally lying south of the North Saskatchewan River and south of Lakes Winnipeg and Manitoba in Manitoba. Precipitation is usually more reliable in the parklands and winters somewhat colder. Northward from the parkland is the forest, with an area of mixed forest and tundra in the extreme northern part of Manitoba.

Summers are normally warm for the latitude but winters are usually long and intensely cold. Consequently there is a very wide range between the temperatures of the warmest and the coldest months, running from about 45° in southwestern Alberta to 70° in southern Manitoba and 75° or 80° in the far northern sections of all three provinces.

Throughout the agricultural area of the three Prairie Provinces mean temperatures are below 32°F. from November through March. Winter cold increases from southwest to northeast. Several stations in southwestern Alberta have January temperatures exceeding 15°F. despite the relatively high elevation. In southeastern Saskatchewan and southern Manitoba, January mean temperatures are at least 15° colder and in far northern sections of all three provinces winter temperatures range from -15° to -20°F. for the coldest winter month.

Winter temperatures on the prairies may vary widely from month to month during a single winter or from year to year depending on the character and path of air masses passing over the region. In some winters, with a steady flow of cold polar air, a cold spell

may last for several weeks, as for example, the winter of 1955-56 when at Edmonton the temperature did not rise above freezing for a period of 84 days (Nov. 10 to Feb. 2). On the other hand, in some winters the southerly flow of Arctic air may be quite weak and air of Pacific origin moves eastward at the surface bringing fine mild weather. There have been winter months when the temperature has averaged 25°F. warmer than normal over a large section of Alberta (February 1931) and there have been winter months when a substantial portion of the western prairies have been 25° or more below normal (February 1936 and January 1950).

Winter temperatures in the lee of the Rockies reflect the warming effect of the "chinook" which occurs from the Northwest Territories to the United States but is most pronounced in southern Alberta with effects noticeable as far east as Regina. Characteristically, the chinook occurs as a westerly or southwesterly wind and is brought about by subsidence east of the western mountain ranges of maritime Polar air from the Pacific. This air is cooled adiabatically at the saturated lapse-rate in its ascent over the mountains but in its descent to the plains it is warmed again adiabatically at the dry lapse-rate which is twice the cooling rate during the ascent. Consequently this air reaches the foothills at a much higher temperature than it had at a corresponding level on the western slopes. The chinook is most striking when it occurs following a cold wave that has been accompanied by snow. The sky clears abruptly and temperatures may rise as much as 60°F. in a relatively short time. The bright sunshine and above freezing temperatures cause the snow to melt rapidly. Extreme temperatures of 61°F. in Calgary, 65°F. at Lethbridge and 66°F. at Medicine Hat in January indicate the warming effect of the chinook in southern Alberta.

Temperatures rise rapidly from winter to summer and fall with equal rapidity to winter. The transition periods are usually confined to April and October. Except in the northernmost portions of the Prairie Provinces, monthly mean temperatures are above 50°F. for the five months May to September. Extreme maximum temperatures have exceeded 100°F. over most of the prairies, and 110°F. in southeastern Saskatchewan and the Red River Valley in Manitoba. The highest recorded temperature for all Canada occurred at Gleichen, Alta., on July 28, 1903, when 115°F. was recorded. On the other hand, temperatures may fall to 32°F. or lower in every month in the north and even in less favoured locations in the southern prairies.

The length of growing season is of particular importance to agriculture in the Prairie Provinces, since throughout the greater part of the grain area the average frost-free period ranges from 80 to 120 days, which is critically close to the minimum required for grain crops to reach maturity. The longest growing season occurs in Alberta between Lethbridge and Medicine Hat—110 to 125 days. Throughout the remainder of the grain area of southern Alberta, the frost-free season slightly exceeds 100 days and farther northward the interval is slightly less, ranging from 80 to 100 days. In the Athabasca Valley the growing season is usually less than 70 days but in the Peace River district the frost-free season exceeds 80 days at most stations.

The South Saskatchewan Valley of Saskatchewan has a growing season in excess of 100 days but throughout the greater part of the Saskatchewan grain area the growing season ranges from 80 to 100 days. The Cypress Hills area is particularly frosty with some stations reporting an average frost-free season less than 60 days, and to the north of the North Saskatchewan River there are fewer than 80 days continuously frost-free. In Manitoba the growing season extends from late May to mid-September over most of the agricultural area with the longest frost-free period (120 days) at Portage la Prairie. In the extreme southeastern section of the province and in the area north of the Assiniboine Valley in the Duck and Riding Mountains the period continuously frost-free is less than 100 days. In the extreme northern sections of Saskatchewan and Manitoba, scattered stations report frost-free periods ranging from 60 to 90 days.

The Prairie Provinces are fortunate in receiving a high average of sunshine for the latitude; the annual totals range from 2,000 to 2,350 hours except in the northeastern and extreme northern portions. July is usually the sunniest month with totals exceeding 300 hours at most stations in Alberta and Saskatchewan and only slightly less in Manitoba.

December is the dullest month of the year with all stations showing totals less than 100 hours. There is a noticeable tendency for the sky to be either cloudless or completely overcast on the prairies.

Lying in the centre of the Continent and shielded from the Pacific by the western mountain ranges, the Prairie Provinces lack available sources for abundant precipitation. The region is favoured, however, by the fact that cyclonic activity is fairly vigorous and the hot summers are conducive to convection, particularly on the southern prairies. The heaviest precipitation on the prairies, especially in Manitoba, results from the lifting of extensive masses of moist air moving northward from the Gulf of Mexico and adjoining regions. Droughts are usually associated with abnormally low pressure in the Northwest Territories which produces only a weak southward flow of cold air.

Over a large section of the Prairie Provinces the total precipitation averages less than 15 inches and even throughout most of the grain area the annual total is less than 20 inches. Manitoba is the most favoured section with totals reaching 22 inches in the inter-lake region. The other extreme occurs on the High Plains north of the International Boundary in Saskatchewan and southeastern Alberta with totals only slightly in excess of ten inches and the effectiveness of this amount is reduced by the strong summer sunshine and drying winds.

In marked contrast to the Pacific Coast with its winter maximum, the prairies have a rainy season from late May to early September, although no season is without some precipitation. The light precipitation is somewhat mitigated by the fact that 60 to 75 p.c. of the year's precipitation falls during the crop season when it can be best utilized by the plants.

During the summer the intense heating and resulting strong convection are conducive to thunderstorm activity. These convective thunderstorms are less severe than the frontal type which develop along cold fronts and are often intensified by local convection. The second type may affect large areas as the front moves across the prairies. Unfortunately, hail frequently accompanies severe thunderstorms and may cause local or even widespread damage to crops and livestock. Distribution of hail along a storm track is erratic and the damage is generally restricted to narrow strips extending for several miles in a more or less discontinuous pattern. Hailstorms, like thunderstorms, are most frequent during the period mid-June to mid-August and are more likely to occur over the open grass-land than in forested areas. Tornadoes are relatively infrequent on the Canadian prairies. There are probably a very few each year but they usually go unreported owing to the relatively sparse population. Only six have been reported as causing damage in excess of one million dollars; the most destructive was at Regina in 1912.

Precipitation shows wide variations from year to year, with differences between the extreme annual amounts exceeding the mean annual total in most areas. However, in an area such as the prairies where precipitation is marginal for agriculture, more harm is caused by droughts than by excessive precipitation. This is especially true when there are a number of dry years in succession which may cause almost total crop failure and serious soil erosion. Drought is most apt to occur in southeastern Alberta and southwestern Saskatchewan; the Edmonton district of Alberta and the Red River Valley of Manitoba have the most dependable precipitation. Monthly precipitation totals are more often in deficit than in excess. A month may have no precipitation over a large section of the western grain area, while occasionally monthly totals may exceed ten inches. June and July are most likely to have high rainfall totals.

Floods are not ordinarily a serious problem on the prairies but high water in river systems with headwaters in the Rockies may occur during the early summer when the flow is increased by melting snow and ice in the mountains. Local flooding may result from excessive local rains in smaller drainage basins during the summer season. The lower valleys of the Red and Assiniboine Rivers in Manitoba, however, are liable to serious flooding such as occurred at Winnipeg in April-June, 1950. This situation developed from a combination of heavy winter accumulation of snow, a cold spring resulting in a late break-up, and moderate to heavy precipitation at the time of the break-up.

Winter snowfall is comparatively light in Central Canada with amounts ranging from 30 to 50 inches over the central prairies. This amount increases to 70 inches in the foothills of the Rockies and probably twice that amount in the highest ranges. Winter snowfall also exceeds 50 inches in central and eastern Manitoba. Snow may fall in any month except July and August, although measurable snow is unusual in June. The first snow cover usually appears in late October and snow disappears in early April. Blizzards and heavy snow drifting in winter are hazards on the open prairies but less so in the parklands and forests where the force of the wind is broken. Severe blizzards are most frequent in the months with heaviest snowfall and attain their maximum intensity when temperatures are zero or below. Although they still cause great inconvenience and disrupt transportation, the hazard of the blizzards has considerably decreased since the early days of prairie settlement.

Ontario

The Province of Ontario covers a vast area, extending over 15° of latitude and 20° of longitude. The southernmost part of the province is in the same latitude as Rome, Italy, while the extreme north is in the same latitude as southern Sweden. Although considered to be an inland province, it is noteworthy that Ontario has a freshwater shoreline of over 2,350 miles along the northern shores of the Great Lakes and in the north a saltwater shoreline of about 680 miles on Hudson and James Bays. The province includes a large portion of the Canadian Shield, a section of the Hudson Bay Lowlands and a large part of the St. Lawrence Lowlands.

Although altitude plays an important part in climatic variations in southern Ontario, that part of the province enjoys a considerably warmer climate than northern Ontario which bears the brunt of severe winter cold waves moving southeastward from the prairies or southward from the Arctic via Hudson Bay with little or no modification. Thus the province may be conveniently divided into Northern and Southern Ontario for discussion.

Northern Ontario.—Northern Ontario, lying between the upper Great Lakes and Hudson and James Bays, has an area slightly in excess of 300,000 sq. miles. Most of it is uninhabited since, except for mining operations, settlement is largely confined to the area south of latitude 50° 30' N. Except for a few rocky ridges northwest of Lake Superior which rise above 2,000 feet, the whole area is less than 1,500 feet above sea-level and much of the Hudson Bay Lowlands has an elevation less than 500 feet. The height of land separating the Great Lakes-St. Lawrence drainage and the Hudson Bay drainage lies in a wide crescent north of Lake Superior extending westward to the Lake of the Woods and eastward to Kirkland Lake. Extensive areas of glacial clay and sediments are found in the Canadian Shield and the largest of these clay plains is the Northern Clay Belt which stretches 125 miles from Hearst to Cochrane and is some 40 miles wide. These clay belts provide suitable soil for agriculture providing there is a sufficiently long frost-free season.

Northern Ontario experiences very cold winters with the 0°F. isotherm for January running from Lake Abitibi westward across the southern end of Lake Nipigon to the Lake of the Woods. Northward, January temperatures are as much as 15°F. colder in the extreme northernmost tip of the District of Patricia. The warming effect of Lake Superior is quite noticeable in winter with Fort William having a January mean temperature of 7°F. January temperatures show a gradual increase southward, reaching 15°F. along the north shore of Lake Huron. A bowl-shaped depression on or near the ridge separating the James Bay drainage area from that of the Great Lakes seems to provide the optimum conditions for extremely low temperatures on clear, still winter nights. The lowest temperatures on record for this area generally range from -50°F. to -60°F. The record low temperature for Northern Ontario is -73°F. at Iroquois Falls.

West of Lake Superior a feature of the climate is the rapid warming in the spring and in the more southerly parts of Northern Ontario spring is in evidence by April. Northward toward James Bay the coming of spring is retarded with a probability of frosts even in June. Summers are quite warm throughout all of Northern Ontario with July mean temperatures ranging from 60°F. in the far north and immediately north of Lake Superior

to 67°F. in the extreme south. This relatively narrow temperature range is in contrast to the much wider variation of nearly 30°F. in January between the extreme northwestern and southeastern sectors. Periods of hot weather are not unusual in summer with occasional occurrences of maximum temperatures in excess of 90°F. In fact, extreme maxima on record have exceeded 100°F. throughout most of the southern portion of Northern Ontario. The summer is short, however, and by mid-October mean temperatures have receded to 40°F. in all but the southern sections.

The length of the frost-free season is of critical importance to agriculture in Northern Ontario. This is an area where there are wide local variations in the incidence of frost depending on the presence of lakes and muskeg, the type of soil and orientation of the site. The size of clearings also has some effect on minimum temperatures during the summer. Low ground and peat bog depressions are particularly liable to frost. In the districts of Kenora and Rainy River and immediately along the north shores of Lakes Superior and Huron there are frost-free periods in excess of 100 days—early June to mid-September. Elsewhere in Northern Ontario seasons free from frost range from 40 to about 100 days. In general, a frosty belt exists over the height of land extending from Lake Nipigon to Lake Nipissing.

Sunshine is ample in Northern Ontario, although somewhat less than on the prairies. Annual totals range from about 2,000 hours in the Lake of the Woods region to 1,500 hours in the James Bay region.

Throughout Northern Ontario there is a definite summer maximum and winter minimum in precipitation. This is especially pronounced in the Lake of the Woods area where the July precipitation is nearly four times the January amount. Average total precipitation over Northern Ontario generally ranges from 20 to slightly over 30 inches with the least amount in the District of Patricia. As a result of orographic effects, the heaviest precipitation in Ontario occurs on the steep northeastern shore of Lake Superior. Steep Hill Falls (elevation 1,100 ft.) has an average annual total of 44.8 inches. Snowfall at this station averages 196 inches. Throughout most of Northern Ontario, winter snowfall averages 60 to 100 inches, and in most winters the warm spells are not sufficiently warm or long enough to melt much of the snow, so by winter's end snow accumulation on the ground amounts to 30 inches or more.

Southern Ontario.—That part of Ontario lying south of Lake Nipissing comprises an area only about one-sixth as large as Northern Ontario. Roughly triangular in shape, it is bounded on the west by Lake Huron, on the south by Lakes Erie and Ontario and on the north and northeast by the Laurentian Highlands. Two important highland regions with large areas above 1,200 feet in elevation rise above the extensive lowlands bordering the lakes and the narrow Ottawa Valley. South of Georgian Bay the western Ontario uplands form a plateau with elevated areas rising to more than 1,700 feet. The other uplands are found in the Algonquin Park area between Georgian Bay and the Ottawa Valley.

The southwestern tip of the province extends farther south than any other part of Canada. This fact combined with the ameliorating influence of the lower Great Lakes serves to give peninsular Ontario a much milder climate than that of the northern districts. The lower lakes region lies in one of the major storm tracks of the Continent and the passage of cyclones and anti-cyclones over the area produces wide variations in the day to day weather, especially in winter. Changes in air masses may be expected to occur every two to five days throughout the year. Usually periods of extreme conditions of severe cold or excessively warm weather are not prolonged.

Winter temperatures reflecting the lake influence are mildest in the areas around Lakes St. Clair and Erie and in the Niagara Peninsula where January temperatures average 24° or 25°F. Northward and eastward the winters are considerably colder, January mean temperatures being 12°F. at Ottawa and 11°F. at Algonquin Park. Along the north shore of Lake Erie and in the Niagara Peninsula, extreme winter temperatures seldom

fall below -20°F . which is an important factor for fruit growing in the area. On the other hand in the Haliburton-Algonquin Park area, extreme minimum temperatures of -45° to -50°F . have occurred.

April marks the return of spring and by mid-May mean temperatures are everywhere above 50°F .; the high percentage of sunshine and ample rainfall stimulates rapid growth. Temperatures warm up more rapidly in spring in eastern Ontario than in the southwestern part of the province, and consequently there is little variation in summer temperatures throughout the whole area. The summers, though warm, are not excessively hot and except for Essex and Kent Counties mean July temperatures do not reach 70°F . at most stations. Periods of oppressive heat accompanied by high humidity resulting from the invasion of air from the heated interior of United States are usually of short duration. Extreme maximum temperatures have exceeded 100°F . almost everywhere in Southern Ontario. Autumn sets in gradually and is usually a pleasant season. During the autumn anti-cyclones may drift slowly over the eastern part of the Continent, producing calm, mild, hazy days and cool nights—the period of “Indian summer”.

The Great Lakes exert a modifying influence on frost at stations in their close proximity. Pelee Island enjoys an average frost-free season of 197 days and the lake influence shows up at other stations near Lakes Huron, Erie and Ontario where the growing season unrestricted by freezing temperatures averages about 160 days. With increasing distance from the lakes there is a corresponding increase in the variation of frost dates and generally a shorter frost-free season. On the upland plateau in southwestern Ontario the season free of frost is four months or less in the Mount Forest-Dundalk area. In eastern Ontario the growing season reaches 160 days at some points along the north shore of Lake Ontario but gradually decreases to less than 100 days in the highlands of Haliburton and Algonquin Park where a minimum of 46 days is reached at Madawaska.

Sunshine totals for the year vary from 1,800 to over 2,000 hours in Southern Ontario. December is the dulllest month with most stations averaging only about two hours of sunshine per day. However, there is a relatively high percentage of bright sunshine during the growing season with the four months May-August receiving more than 200 hours each month with a peak of nearly ten hours per day in July.

Precipitation is fairly uniformly distributed throughout the year in Southern Ontario with no pronounced wet or dry season. The mean annual amount ranges from 27 to 40 inches and is usually adequate for successful agricultural operations. The heaviest precipitation falls on the western slopes of the highlands facing Lake Huron and Georgian Bay with definite rain shadows in the lee of these uplands. A belt of heavier precipitation also occurs in the area between the St. Lawrence and Ottawa Rivers. The driest sections are Prince Edward County, Manitoulin Island, the Harrow-Leamington area, the Niagara Fruit Belt and the Camp Borden area south of Georgian Bay.

The greater part of summer rainfall results from showers and thundershowers of short duration and wholly overcast or rainy days are comparatively rare during the months of June, July and August. Thunderstorms may be expected to occur on 20 to 30 days each year in Southern Ontario. Hail occasionally accompanies summer thunderstorms and while these storms are infrequent they may cause severe damage to fruit, tobacco and garden crops. The peninsula of Southern Ontario is usually outside the tornado belt of central United States but in recent years such storms have occurred particularly in the Windsor-Sarnia area. Small “twisters”, which do a considerable amount of local damage, are usually reported each summer in different parts of the province.

The distribution of winter snowfall in Southern Ontario is quite similar to that of total precipitation. The smallest amounts of 40 inches or less occur in Essex and Kent Counties and in the Niagara Fruit Belt where the snow cover usually lasts less than three months. The greatest amounts fall on the upland slopes facing Lake Huron and Georgian Bay when cold air saturated and warmed in its passage over the water is forced to ascend the colder highlands. Stations in the centre of this snow belt receive from 100 to 125 inches of snow and the snow cover lasts four to five months. On many winter days in Southern Ontario temperatures are critically close to the freezing point, and consequently,

precipitation may occur as either rain or snow. For this reason, the accumulation of snow on the ground during the winter varies rather widely from year to year, especially on the lowlands. Snow cover is generally more reliable in the highlands.

Quebec

Quebec is the largest province in Canada, stretching from the International Boundary on the south to Cape Wolstenholme on Hudson Strait, a distance of 1,200 miles. In the north, treeless tundra, wasteland and unproductive forest occupy 160,000 sq. miles; productive forest covers slightly less than 225,000 sq. miles and about 25,000 sq. miles are utilized for agriculture. Physiographically, Quebec may be divided into three main regions: the Canadian Shield or the Laurentian Plateau, which occupies the greater part of the province, extending from the rugged plateau-like highlands north of the St. Lawrence River to Hudson Strait; the St. Lawrence Lowland; and the Appalachian Highlands.

The Laurentian Plateau rises from sea level on the shores of Hudson and James Bays to 1,000 feet in Abitibi, 1,500 feet in the Laurentian Mountains and about 2,000 feet along the Labrador boundary. Summits rising to 3,900 feet are found in the Laurentide Park north of Quebec City and to 3,150 feet in Mont Tremblant Park west of Montreal. In general, however, the Laurentian Plateau is a surface of unbelievable monotony, literally strewn with lakes. Extending from Alabama to Newfoundland, the Appalachian Mountains include southeastern Quebec. They reach their greatest extent in the Eastern Townships and their greatest heights in the Gaspé Peninsula where Quebec's highest peak, Mount Jacques Cartier rises to 4,160 feet. The small St. Lawrence Lowland is triangular in shape, bounded by the Canadian Shield in the north, the Appalachian Highlands on the east and the Adirondack Mountains of New York State to the south.

Owing to its geographical position, large area and complex physiographic relations, Quebec has a wide variety of climates. The southwestern part of the province is subject to the same climatic influences as the lower lakes region of Ontario but is without the protection afforded by the Great Lakes. On the other hand, the highlands stretching from Hudson Bay to Labrador are bitterly cold in winter and are practically summerless in the far north.

Mean annual temperatures vary from 44°F. in the extreme south to about 17°F. near Cape Wolstenholme. January mean temperatures are in the neighbourhood of 15°F. in the Montreal area and 12°F. at Quebec City and in the Eastern Townships. Maritime influences serve to maintain means of 10° to 12°F. in this mid-winter month at low-level stations on the Gaspé Peninsula and on Anticosti Island. The 0°F. isotherm for January runs from Abitibi almost due east to the Lake St. John area and thence northeastward along the north shore of the Gulf of St. Lawrence. The Ungava peninsula, which is subject to the almost continuous importation of cold air masses from higher latitudes and intensive radiation from the prevailing high level of the land, experiences mean winter temperatures of -10° to -15°F.

The topographical situation on the Canadian Shield in the interior of central Quebec is quite similar to Northern Ontario and as a result winter minima may be expected to fall to -40° or -50°F. A record low temperature for Quebec of -66°F. has been reported at Doucet.

The rapid advance of spring in the St. Lawrence Valley is a striking feature of the climate of that area. March is definitely a winter month at Montreal but by April the mean temperature is nearly as warm as at Toronto, while May and the summer months are equally warm, with July averaging 70°F. Farther down river at Quebec and throughout the Eastern Townships, July mean temperatures are two to five degrees cooler than at Montreal. On the south shore of the Gaspé Peninsula, July temperatures average about 64°F. but elsewhere in the Gulf of St. Lawrence region normal mid-summer temperatures are around 60°F. On the Laurentian Plateau July mean temperatures decrease from 60°F. at latitude 50°N. to 45°F. along the south shore of Hudson Strait but despite the generally cool summer temperature, markedly warm days may occur. Extreme maximum temperatures of 90°F. have occurred in all but the extreme northern portion of the Ungava peninsula.

Southern Quebec is frequently invaded in summer by warm air masses from the southwest and temperatures in excess of 90°F. are not infrequent. As in Southern Ontario, very oppressive conditions result when these hot spells are accompanied by high humidity. Fortunately, such conditions are usually of relatively short duration.

The longest frost-free season in Quebec occurs in the lower Ottawa Valley and in the Montreal region where the growing season extends from early May to late September (135 to 155 days). Southward from the St. Lawrence River the frost-free season falls off with increasing elevation to less than 100 days in the Thetford Mines-Disraeli area. Most localities in the Saguenay Valley and in the Lake St. John region experience a season free of frost slightly in excess of 100 days but in the Laurentian Hills to the west the growing season decreases to 80 to 100 days for the most part, depending on local topography and exposure. At stations along the shore of the Gaspé Peninsula, the proximity to the water is responsible for a frost-free season of 120 to 140 days but the growing season is drastically curtailed to less than 100 days at higher elevations. There is also a relatively long period of three to four months free from frost immediately along the north shore of the Gulf of St. Lawrence. Throughout the northern interior of the province the season continuously free of freezing temperatures varies from 40 to 80 days. A large section of northwestern Quebec has permanently frozen sub-soil. The limit of permafrost or the southern limit of permanently frozen soil or sub-soil extends across the northern part of Ungava peninsula in a wide arc from a point north of Port Harrison on Hudson Bay to Knob Lake at latitude 55°N. and thence northeastward into Labrador.

The total annual precipitation ranges from 30 to 40 inches over most of southern Quebec and, while quite evenly distributed throughout the year, there is a tendency toward a maximum in the summer and early autumn. Precipitation is substantially heavier in the middle St. Lawrence Valley and in the Eastern Townships than in the Lower Lakes region of Ontario. The annual total at Montreal is 41.8 inches as compared to 30.9 inches at Toronto. Not only is the total fall greater but the number of days with measurable precipitation increases from 143 days at Toronto to 160 days at Montreal. Severe droughts are unusual throughout the agricultural area of southern Quebec.

North of the St. Lawrence River and Gulf, precipitation varies considerably with topography and elevation. Where stations are situated near the crest of steeply rising slopes but facing the river, the precipitation is considerably increased, particularly in the Laurentide Park region between Quebec City and Lake St. John. Annual precipitation is quite heavy in the central interior of the province averaging 40 inches at Chibougamau, 36 inches at Lake Manouan, 29 inches at Mistassini Post, and 31 inches at Nitchequon, but decreases toward the west and northwest to 21 inches at Fort McKenzie, 16 inches at Fort Chimo, 14 inches at Cape Hopes Advance, and 15 inches at Port Harrison.

Winter snowfall is heavy everywhere in Quebec, and over a large section of the central interior of the province the accumulation on the ground at the end of winter exceeds four or even five feet. The heavy snow is welcomed by foresters and farmers as well as by tourists and sportsmen at winter resorts in the Laurentian Highlands. Average winter snowfall varies from 80 to 100 inches throughout most of the Ottawa and middle St. Lawrence Valleys but below Quebec City and in the Appalachian Highlands larger totals of 100 to 125 inches are general. The heaviest snowfall in Eastern Canada, 120 to more than 160 inches occurs north of the Gulf of St. Lawrence where moisture-laden air is forced against the steep slopes of the north shore. In this area winter is the season of maximum precipitation.

In the far north, west of Ungava Bay, the average snowfall is less than 60 inches but amounts increase rapidly toward the interior and at higher elevations of the eastern portion of the Canadian Shield where the total winter snowfall exceeds ten feet.

The Maritime Provinces

Lying between 43° and 48°N. latitude, the Maritime Provinces comprise 51,000 sq. miles, an area almost equal to that of Southern Ontario. The region is one of varied relief and as a result of the long and deeply indented coastline no part of the area is more

than 100 miles from the sea; most of it less than 30 miles from salt water. The eastern and central parts of New Brunswick, most of the northern part of Nova Scotia and all of Prince Edward Island are lowlands. Much of northwestern New Brunswick is more than 1,000 feet above sea level, and the southern highlands also contain elevations above 1,000 feet. The practically flat-topped Cape Breton Plateau rises to an elevation of 1,200 feet and there are similar elevations in the Cobequid range in Nova Scotia.

Although the effects of the sea are everywhere noticeable, the climates of the Maritime Provinces are typically continental rather than maritime owing to their situation on the east coast of an immense continental land mass. Since the general movement of air masses is from west to east in these latitudes, air reaching the region has usually had a previous history over the Continent; for this reason the mean annual range of temperature is about twice as great on the Nova Scotia coast as on the west coast of Vancouver Island. On the other hand, influxes of moist Atlantic air produce mild spells in winter and periods of cool weather during the summer.

The winters are particularly stormy on the Atlantic Coast since the weather is controlled by cyclonic storms which tend to pass along the southern border of the region, preceding the invasion of cold polar air. These winter storms often produce violent gales and rains changing to snow. In summer the concentration of low pressure centres over the St. Lawrence Valley to the north leaves the Atlantic Provinces under the predominating influence of winds from the south, southwest or west.

The comparatively warm waters of the Gulf Stream and adjacent waters form a reservoir of moisture which aids in the production of fog especially along the Atlantic Coast of Nova Scotia and in the Bay of Fundy where some coastal stations report nearly 100 days with fog annually, with the greatest frequency in July. On the other hand, the cold Labrador Current, moving down the eastern shore of Newfoundland and with a branch entering the Gulf of St. Lawrence through the Strait of Belle Isle, cools the air passing over it and produces fogs at sea and along the coast with a peak frequency in the late spring months.

January is the coldest month and July the warmest in most sections of the Maritime Provinces but at some coastal points in Nova Scotia both the warmest and coldest periods are delayed several weeks owing to the moderating effect of the water. The effects of elevation and continental influences are clearly reflected in the winter temperatures with the mildest occurring along the Atlantic Coast of Nova Scotia where the mean temperature for the coldest month varies from 24° to 26°F. Along the south shore of the Bay of Fundy and in the Annapolis Valley, January means of 20° to 24°F. occur, with lower means of 18° to 20°F. general along the north shore. Towards the interior of New Brunswick lower winter temperatures prevail as illustrated by a January mean temperature of 14°F. at Fredericton and 8°F. at Edmundston. January mean temperatures average 18° to 20°F. on Prince Edward Island and 20° to 24°F. at Cape Breton Island. Cold polar air entering the region from the north does not moderate rapidly especially if the ridges are snow covered; in fact, extreme minimum temperatures of -30°F. may be anticipated in northwestern New Brunswick. The record low for the province is -52°F. at Chipman which compares with an extreme low temperature for Nova Scotia of -42°F. at Upper Stewiacke and -27°F. for Prince Edward Island at Charlottetown.

Summer temperatures are not as high in the Maritime Provinces as in Southern Ontario and Quebec at the same latitude. Mean temperatures for the warmest summer months are 60° to 65°F. along the Atlantic Coast of Nova Scotia and the shores of the Bay of Fundy, but on Prince Edward Island and in the interiors of Nova Scotia and New Brunswick July mean temperatures vary from 64° to 67°F. Occasionally during any summer month maximum temperatures in excess of 80°F. may be expected in all three provinces with extremes of heat more pronounced in New Brunswick. Extreme temperatures have exceeded 100°F. often in New Brunswick and occasionally in Nova Scotia but never at an official weather station on Prince Edward Island.

The advent of spring in the Maritime Provinces is much the same as in comparable latitudes in Ontario and Quebec, but temperatures do not fall so rapidly in autumn. Nevertheless there are wide variations with respect to the length of frost-free season throughout the region. Along the immediate shoreline and on the islands of the Bay of Fundy there is a frost-free period of 140 to 160 days but in the Miramichi highlands of New Brunswick where there is a greater liability of frosts from a spring or autumn inflow of polar air, the average frost-free period falls to less than 100 days. The frost-free period decreases from 140 days at the mouth of the St. John River to 100 days along the upper reaches. Periods free of frosts average about 120 days in the southwestern lake region of New Brunswick while along the east coast and along the south shore of the Bay of Chaleur the growing season is extended another ten days. In Nova Scotia an average frost-free season of 160 days is enjoyed at Yarmouth which is ten or fifteen days longer than most stations experience elsewhere along the Atlantic Coast. Periods free from frost of 125 to 140 days occur on the average in the Annapolis Valley but in the central highlands on the Nova Scotia mainland there is a comparatively short growing season of less than 100 days. On Cape Breton Island the frost-free period exceeds four months at Sydney but it is believed that this figure falls to less than 100 days on the higher elevations. Prince Edward Island enjoys a frost-free period of about five months.

Mean annual precipitation ranges from 55 inches along the outer coast of Nova Scotia to less than 40 inches in northwestern New Brunswick. The heaviest precipitation in the latter province, 42 to 48 inches, falls along the north shore of the Bay of Fundy. In the southern section of New Brunswick precipitation is fairly evenly distributed throughout the year with a tendency toward a maximum in the autumn and early winter months. In the northern interior the precipitation shows a summer maximum characteristic of the continental type of climate. Except for the wet Atlantic coastal area of Nova Scotia, precipitation in that province varies from 37 to 50 inches and on Prince Edward Island annual precipitation averages slightly more than 40 inches.

The heaviest winter snowfall in the Maritime Provinces occurs in northwestern New Brunswick where 100 to 120 inches may be expected. This heavy snowfall is of economic importance to lumbering. In the eastern and southern sections of the province winter totals generally range from 70 to 90 inches. Snowfall averages about 90 inches on the higher elevations in Nova Scotia but elsewhere totals are smaller—60 to 80 inches. On Prince Edward Island, a long record of snowfall observations at Charlottetown Experimental Farm gives an average winter fall of 113 inches.

Newfoundland

Newfoundland, the newest and most easterly province of Canada, consists of two distinct geographical units—the Island of Newfoundland comprising an area of 43,000 sq. miles and the mainland territory of Labrador with a much larger area of 113,000 sq. miles. In view of the physical separation of these two sections of the province, the climatic characteristics are discussed separately.

Island of Newfoundland.—The landform of the Island of Newfoundland is quite similar to that of the Maritime Provinces. The coastline is deeply indented with bays and inlets and the Island itself consists of a plateau rising in a northwesterly direction from the east coast to almost mountainous highlands on the west side of the Island. The greater part of the Island consists of bleak, flat terrain at elevations of 800 to 1,500 feet. Because of its position on the eastern side of North America, Newfoundland comes under the influence of continental air masses and experiences a wide range between summer and winter temperatures. However, as a result of the virtual encirclement of the Island by cold waters of the Labrador Current, the sea exerts a dominating influence on Newfoundland's climate moderating both summer and winter temperatures. Sea-ice which normally reaches its greatest extent in March retards the advent of spring especially on the eastern and northern shores.

Newfoundland coasts and offshore waters are foggy although no more so than the southern coast of Nova Scotia. These fogs result from the flow of warm, humid air over the cold waters of the Labrador Current and the Gulf of St. Lawrence. Unfortunately fogs are at their worst early in the navigation seasons when icebergs are most plentiful off the eastern coast. There is a marked decrease in the number of foggy days in the late summer. The frequency of strong winds and gales increases as autumn progresses. The Strait of Belle Isle has a reputation for cloudiness, and gales are not uncommon in this area even in mid-summer.

Winter temperatures in Newfoundland are noteworthy for the coldness of the interior, the mildness of the coasts, and the variability of the day-to-day temperatures. January mean temperatures vary between 15° and 20°F. in the interior and increase to 25°F. on the southeastern coasts. Following a late spring, summer is usually brief but pleasant. July mean temperatures are above 60°F. in the interior but the cool Labrador Current holds the mean temperature to slightly in excess of 55°F. along the southern and eastern coasts. Hot spells occur occasionally during the summer and maxima of 85°F. are not unusual along the railway belt across the interior. Temperatures decline rapidly in autumn, falling more quickly in the north than the south, thus ending the anomalous flat distribution of temperature across the Island typical of summer. The Long Peninsula presents a remarkable gradation in climate. At the southern end temperatures are representative of the central interior but at Belle Isle the mean July temperature is only 49°F. as a result of the cold Labrador Current which is often ice-laden even in mid-summer.

As elsewhere in Canada the mean duration of the frost-free period varies widely in Newfoundland. Along the south coast the frost-free season ranges from 140 to 150 days, with the Burin Peninsula the most favoured area. On the Avalon Peninsula the frost-free interval ranges from 110 to 140 days. In the interior of the Island the growing season averages 100 days or less, being shorter in areas where topography favours local drainage of cold air.

The whole Island has abundant precipitation and although well distributed throughout the year, autumn is a season of relatively heavy precipitation with November the wettest month in most localities. This is followed by a decline which reaches a relative minimum in April to rise again during the summer toward the autumn maximum. The south coast and southwestern sections of the Island have the greatest annual precipitation amounting to 50 to 60 inches. The northeastern section is drier, receiving 35 to 45 inches and scanty data indicate 30 to 35 inches at the northern end of the Long Peninsula.

Winter snowfall is heavy in most districts with more than 100 inches indicated everywhere except along the southern coastal area. Increasing distance from the coast and higher elevations combine to give the heaviest snowfall in the interior and western part of the Island. At Corner Brook winter snowfall averages 164 inches. Fragmentary data indicate that the normal depth of snow on the ground in the Avalon Peninsula does not exceed one foot but increases to two and one-half or three feet in the northwestern section of the Island.

Although glaze or ice storms are not uncommon in other parts of Canada, such storms reach their maximum intensity in Newfoundland where they are referred to locally as "silver thaw". These storms usually occur with a south wind when the ground and air near it are still below freezing, so that the rain resulting from the warm moist air over-riding the surface layer freezes as soon as it comes in contact with the ground or objects below freezing. If these storms continue for any length of time the ice accumulation builds up to a thickness sufficient to break down transmission wires, trees, and other objects. Such a devastating glaze storm struck the St. John's area over the first of March 1958 causing widespread damage.

Labrador.—Labrador extends over 9° of latitude, a distance of 600 miles. Physically it is the Atlantic slope of the Labrador-Ungava peninsula and the landform is a rough tilted plateau, highest in the north where the Torngat Mountains have peaks rising to over

5,000 feet. South of the Hamilton River, the largest river in the region, the Mealy Mountains reach heights of 4,000 feet. Thousands of small rocky islands lie off the rather abrupt, indented coast of the mainland.

The climate of all Labrador is severe, the yearly mean temperature for the whole area being below freezing. Along the coast January mean temperatures range from zero in the north to 10°F. in the south and are lower than -10°F. in the most westerly part of the interior. In the south, mean temperatures are above 32°F. for approximately 180 days and this figure decreases to 140 days in the north. Summer temperatures are cool along the coast owing to the influence of cold offshore waters, ranging from 45° to 50°F. in July, but are 5° to 10°F. warmer in the interior. Goose Airport with a mean July temperature of 61°F. has recorded an extreme summer maximum of 100°F. and an extreme winter low temperature of -38°F.

Along the Labrador coast the frost-free period extends to almost 100 days in the south, gradually decreasing to 40 days in the north. In the interior, Goose has an average frost-free period of 96 days and Sandgirt Lake 84 days based on a short record.

Annual total precipitation in Labrador decreases from 40 inches in the south to 20 inches in the north. Southern Labrador shares the rainy characteristics of the north shore of the Gulf of St. Lawrence. The winter snowfall pattern shows exceptionally heavy snow in the southeastern sections with Cartwright having 200 inches. In the interior, Goose, a location sheltered by high hills in every direction except northeast, has a mean snowfall of 141 inches. The ground is snow-covered for eight months in the far north with the period decreasing to six months in the south. Winter accumulation of snow by the end of winter usually reaches an average depth of five feet over most of Labrador and has exceeded seven feet on occasion in the snowier sections of the region.

The Northwest Territories

Constituting more than one-third of the total area of Canada, the Northwest Territories include the mainland Districts of Mackenzie and Keewatin and the Arctic Archipelago or District of Franklin. East of the western mountain fringe the mainland portion of the region consists of plains, high in the west and sloping gently to Hudson Bay on the east and to the Arctic Archipelago on the northeast. In the Archipelago, a high mountain range lies in a general north-south direction across Baffin, Devon and Ellesmere Islands with peaks rising above 10,000 feet. The extent to which the mountain range acts as a barrier to the free transport of air from one side to the other is not known, but there is little in the way of topography to interfere with the general north-south movement of air masses over this whole vast region.

Authentic weather information from far northern Canada was fragmentary until recent years. Log books of the early Arctic explorers provided limited information on the Polar Archipelago and weather data have been provided by the Hudson Bay Company, missionaries, explorers, members of the Royal Canadian Mounted Police and government officials from widely separated points. As a result of growing public interest in northern Canada, and in recognition of the great importance of weather information from this region for aviation and public weather forecasts, the number of reporting stations has been increased in recent years. Noteworthy in this regard is the establishment jointly by Canada and the United States of five weather stations on the remote islands of the Archipelago during the years 1947-50. The most northerly of these stations, Alert on Ellesmere Island, is less than 8° south of the Pole.

The extreme length of the night in winter and of the day in summer is the major factor in climatic control in high latitudes. North of the Arctic Circle the sun does not set in mid-summer nor rise in mid-winter. This latitudinal control of incoming radiation combined with the areal distribution of land and water broadly determines the climatic limits throughout the Northwest Territories. Most of the water surfaces are frozen over in winter when bitterly cold weather prevails over the entire area. The long hours of sunlight in summer warm the ground in the northwestern portion of the region and heat the lower layers of the atmosphere by conduction, producing mid-summer mean

daily temperatures of 55°F. as far north as the Mackenzie delta. On the other hand, in the northeast, the icy waters of the Arctic and the southward extension of the cold water in Hudson Bay provide a surface which, despite solar radiation, keeps average summer temperatures between 40° and 50°F. The southern limit of permafrost has been determined as running from the confluence of the Liard and Mackenzie Rivers, eastward along the north shore of Great Slave Lake and thence in a general southeasterly direction, crossing the 60th parallel of latitude just east of Lake Athabasca. The fact that only a small portion of the District of Mackenzie lies outside the permafrost area is an indication of the climate of the region.

The Mackenzie Basin.—A striking feature of the climate of the Mackenzie Basin is the wide range from summer to winter temperature. The long winters are intensely cold, -20°F. in January the coldest month; the summers have three months with temperatures over 50°F. with the warmest month, July, about 60°F. in the upper portion and 55°F. on the delta. Mean monthly temperatures are below 32°F. for seven months—October to April. Although winter minimum temperatures may fall below -70°F. and summer maxima rise above 95°F., such occurrences are infrequent. Except in summer the variation of the mean temperature for a month may be quite large. Local effects such as topography, distance from bodies of water, etc., have considerable influence on the length of the frost-free periods which varies from 50 to 100 days throughout the Mackenzie Basin.

As in other parts of the Northwest Territories precipitation is light in the Mackenzie Basin with a decided summer maximum. Annual totals range from 9 to 15 inches with considerable variability from year to year. Deficiency of precipitation appears to be the main check on such agricultural pursuits as other climatic and soil conditions may admit. Mean annual snowfall for the Mackenzie Valley averages 50 inches with a maximum in November. Snow is liable to fall in any month except July or August.

The Barrens.—The isotherm of 50°F. for the warmest summer month coincides fairly closely with the northern limit of tree growth. Beyond this line which runs from Aklavik to Churchill, the Barrens stretch northward to the Arctic and eastward to Hudson Bay. Most of the region is low-lying with countless lakes, swamps and muskeg. The climate is characterized by extremely short and cool summers and very long, cold winters. The cold Arctic seas, ice-covered for more than half the year, exert an unfavourable maritime influence on the region in summer.

Mean temperatures are below freezing for eight or nine months of the year and above 40°F. for only two months—July and August. During the warmest summer month the mean daily maximum rises to 55°F. or 60°F. and the mean daily minimum falls to about 40°F. Extreme summer temperatures have exceeded 85°F. generally in the Barrens. Spring comes very late, delayed by the slow melting of the ice, and subsequently, by the cold water of the sea, lakes and muskeg. Freezing temperatures may occur during any month of the year but on the average there is a frost-free period of 40 to more than 60 days throughout the region.

The Arctic coast is remarkably free of cloud in the mid-winter months but in the late summer and early autumn this region is among the cloudiest in Central Canada. Precipitation decreases from 12 inches in the south to seven or eight inches in the north, with snowfall contributing about 40 to 50 p.c. of the total moisture. The annual distribution of precipitation shows a maximum in the summer and early autumn and the ground is snow-covered for about eight months with the greatest monthly snowfall in October and November. Strong winds are frequent in winter especially in the District of Keewatin and the vast treeless expanses favour drifting which causes the snow to blow into the sheltered crevices and hollows and sweeps bare the open ground. Blizzards are most frequent near the coast of Hudson Bay.

The Arctic Archipelago.—The climate of the Arctic Archipelago may be classified as modified maritime Arctic. Despite the fact that mean annual temperatures are lower than in any other part of Canada, 15°F. in the extreme southeast and 0°F. in the very

far north on Melville and Ellesmere Islands, the extremes are not as severe as they would be in a continental area of the same latitude. During the cool brief summer the ice-filled polar waters with a surface temperature near 30°F. prevent the air in contact with them from warming up to any extent. Consequently, summer temperatures are uniformly cool throughout the entire region, averaging 40°F. to 45°F. during July, the warmest month. In winter most water surfaces are frozen but the new ice is usually less than six feet in thickness and radiation from the water below exerts a slight moderating influence. The highest January mean temperatures occur in the Hudson Strait region with values ranging from 0°F. to -5°F. at the eastern entrance and -10°F. to -15°F. at the western end. The lowest January means of -30°F. to -35°F. occur north of latitude 75°N.

Despite the fact that mean temperatures are generally below zero for six months or more, occasional mild periods occur during the Arctic winter. They are caused by intense cyclonic activity in the Davis Strait area which brings comparatively warm air from the Atlantic over the eastern Arctic. A striking example of such mild conditions occurred in January 1958 when the whole of the eastern Arctic experienced abnormal warming, with mean temperatures for the month as much as 15°F. above normal in northern Ellesmere Island. These mild spells rarely extend farther west than Cornwallis and Somerset Islands or farther north than the southern part of Ellesmere Island and the average variation in mean temperature for winter months in the western Arctic is less than half that for eastern Arctic stations. Freezing temperatures may occur during any month of the short cool summer.

The Arctic Archipelago is one of the driest regions in the world. The annual total precipitation over the islands north of the Parry group averages less than five inches, with Eureka reporting only 2.5 inches and Mould Bay only 3.0 inches a year. Southward from the Parry Islands there is an increase in annual precipitation with decreasing latitude with totals ranging from 5 to 10 inches between latitude 75°N. and the Arctic Circle. In southern Baffin Island the mean annual totals range from 10 to 15 inches. Snow may fall during any month of the year in the Arctic Archipelago but rainfall is restricted to the relatively short summer warm period. In the south 40 to 50 p.c. of the annual precipitation totals occurs as rain and in the very far north this is decreased to about 30 p.c. The accumulation of rime or hoar frost in the Arctic is also a source of moisture. Although showers, and even a rare thunderstorm, may occur occasionally in the southern part of the Archipelago, most summer rainfall is in the form of a light drizzle.

In the eastern Arctic there are two periods of maximum cloudiness, one in the spring and one in the autumn with a shallow minimum in mid-summer and a decided minimum in winter. For stations near the polar ice pack, the spring cloudiness maximum tends to be delayed and the autumn maximum advanced to such an extent that they merge into one with a minimum in winter. The high percentage of low cloud and drizzly weather produce very unpleasant conditions in the Arctic summer.

Although snowfall is light in the Arctic, a distinct maximum in the monthly snowfall is observed in the autumn and also a spring maximum which is not as marked in the southern half of the Archipelago as in the northern. In view of the small size of the snow crystals they are readily blown about by the wind with the result that much of the ground is bare all winter, whereas deep drifts are formed in ravines, hollows and in the lee of obstacles. The measurement of snowfall is very difficult in the Arctic.

The following table provides basic temperature and precipitation data for a selection of stations in various districts across Canada. Monthly and annual climatic data in greater detail will be presented for 45 stations in the 1960 Year Book.

Temperatures in this table refer to observations taken in a thermometer shelter which has been placed in a representative location with the thermometer bulbs four feet above the surface of the ground. Mean January and July temperature data are based on records over the 30-year period from 1921 to 1950 except for far northern stations where

the available period of record is shorter. After an average temperature is obtained for each day in January over a 30-year period, the mean January temperature may be arrived at by striking a mean of these 930 daily values. The mean July temperatures may be obtained in a similar manner. The highest and lowest temperatures on record refer to the absolute extremes for the entire period of record at each station. Average dates are shown for the last occurrence in spring of a temperature of 32°F. or lower and for the first occurrence in autumn of freezing temperatures at the four-foot level in the thermometer shelter.

The official Canadian rain gauge is a small cylinder in which the rain is caught and then measured to one-hundredth of an inch with a simple measuring device. Freshly fallen snow is measured as it lies on the ground and recorded to the tenth of an inch. Total precipitation values as shown in the table below are the sum of the total rainfall and one-tenth of the total snowfall. This assumes a specific gravity of 0.1 for freshly fallen snow. For the purposes of this table, a day with precipitation is one on which at least one-hundredth of an inch of rain or one-tenth of an inch of snow has fallen.

REFERENCES AND SOURCE MATERIAL

The Meteorological Branch of the Department of Transport, Toronto, regularly prepares and issues a series of current climatic data publications. These are listed below along with references to recent special publications issued by the same Branch. Detailed and extensive studies of the provincial and regional climates of Canada have been prepared and published both commercially and by other governmental agencies.

1. Regular publications of the Meteorological Branch:—

Monthly Meteorological Summaries from 25 cities and towns in Canada.

The Monthly Weather Map.

Monthly Record of Meteorological Observations in Canada.

General Summaries of Hourly Weather Observations in Canada (annual).

2. Special publications of the Meteorological Branch:—

Climatic Summaries for Selected Meteorological Stations in Canada: Vol. I, Temperature, precipitation, sunshine, 1947. 63 p.; Vol. II, Humidity and wind. 1948. 88 p.; Addendum to Vol. I, Temperature and precipitation. 1954. 29 p.; Vol. III, Frost data. 1956. 94 p.

Section 2.—Meteorological Observing Stations in Canada*

In 1958 official meteorological observations were taken and recorded at some 1,750 weather reporting stations in Canada. There are several different classes of stations, ranging from the first-order reporting stations at airports where hourly observations of all aspects of the weather are recorded, to the co-operative precipitation observing stations where a volunteer observer makes daily observations of rainfall and snowfall.

The official recording of weather observations in Canada began early in 1840. Although there are some scattered weather records prior to that date, it was at the Toronto Observatory, established by the British Government, that the first scientifically precise Canadian weather observations were recorded. Several additional observing stations were established in the 1860's after control of meteorological work had passed into local governmental hands and a national meteorological service was organized in 1871. By 1876 there were more than 100 stations, 15 of them reporting daily by telegraph to Toronto for forecasting purposes.

Since then, the number of meteorological observing stations has grown steadily. As the mid-west opened up around the turn of the century, they spread into that area and during the past three decades into the sub-Arctic and Arctic regions. At the same time the coverage has improved in the older portions of southeastern Canada. While there are vast areas of Canada where the weather stations are several hundred miles apart, most of the settled portions of the country are represented by first-order hourly reporting stations every 100 miles or so, and by co-operative climatological observing stations at least every 25 miles.

Of the 1,750 weather reporting stations in Canada in 1958, some 250 are classified as first-order synoptic stations. At most of these stations complete weather observations are made every six hours and at a large percentage of them only slightly less complete observations for aviation forecasts every hour. These weather data, including information on temperature, precipitation, pressure, wind, humidity, cloud and visibility, are sent first by radio and teletype to the different weather offices across the Continent to be used for weather forecasting purposes and at the end of the month the manuscript reports are despatched by mail to Meteorological Headquarters for use in compiling climatic statistics. At some 90 of these observing stations, personnel of the Telecommunications Branch of the Department of Transport take weather observations as part of their scheduled duties, while 35 stations are operated in a similar manner by the different Armed Services. Seventy

* Prepared by the Meteorological Branch, Department of Transport, Toronto.

stations are operated by Meteorological Branch personnel and the remainder of the stations are operated under contract mainly by various transportation and communications companies.

About 950 weather observing stations in Canada are classified as climatological stations where the observers record temperature extremes and precipitation once or twice daily and send in monthly data sheets. Most of these climatological observers serve on a voluntary basis and willingly spend several hours a month on their hobby. These observers come from all walks of life—farmers, business men, clergymen, retired people, etc. In addition, many governmental and industrial organizations such as agricultural experimental farms and power companies have incorporated brief climatological duties into the general work of some of their employees. These climatological stations have contributed much useful information on temperature and precipitation for publication by the Meteorological Branch.

There are about 500 stations classified as precipitation stations where rainfall and snow-fall only are observed and recorded. Since precipitation varies more rapidly than temperature over short distances, a dense network of these stations is required, especially in large urban areas. Finally, there are about 50 miscellaneous stations where observations of wind, sunshine and temperature are taken for special purposes. In all, the total number of weather stations in Canada has been growing at a rate of more than fifty a year for the past decade and thus a steadily increasing climatic intelligence is assisting Canadians in all economic pursuits.

Section 3.—Standard Time and Time Zones

Standard time, which was adopted at a World Conference held at Washington, D.C., in 1884, sets the number of time zones in the world at 24, each zone extending over one twenty-fourth of the surface of the earth and including all the territory between two meridians 15° longitude apart. The basis of world time is Greenwich time and all other time zones are a definite number of hours behind Greenwich.

Canada has seven time zones, the most easterly being Newfoundland standard time, three hours and thirty minutes behind Greenwich time. In the west, Pacific standard time, used throughout British Columbia and part of the Northwest Territories, is eight hours behind Greenwich, and Yukon standard time, used throughout the Yukon Territory, is nine hours behind Greenwich. Some municipalities adopt the time used by the local railways which, in certain cases, differs from the standard. There are also villages that adopt such time as seems best to suit their convenience but in general the legal boundaries of the different time zones are actually in use.

Daylight Saving Time.—For some years before World War I there was active propaganda, particularly in the cities, for the use during the summer months of an earlier time usually referred to as 'daylight saving time', one hour ahead of standard time. It was considered from the economic as well as from the health point of view that people in industrial towns and cities would gain by having longer periods of sunlight at their disposal for recreation. Canada adopted daylight saving time in 1918 but the Canadian Act lapsed at the end of that year. Since that date, however, most cities and towns have adopted daylight saving for varying periods in the summer months.

Legal Authority for the Time Zones.—Most of the regulations made in Canada concerning standard time have been passed by the provincial legislatures and the Northwest Territories Council. Legislation, besides determining the boundaries of zones, regulates such matters as the times of coming into effect or expiration of Acts, ordinances, contracts and agreements, times of opening and closing registration offices, law courts, post offices and other public offices, times of open or close seasons for hunting and fishing, and times of opening and closing business houses and places of amusement.

PART IV.—GEOPHYSICS AND ASTRONOMY

Section 1.—Geophysics

Geophysics began with the observations made by early navigators of the weather, ocean tides and the lodestone. These studies gradually developed into modern meteorology, physical oceanography and terrestrial magnetism. To them were added other physical studies of the earth so that geophysics now includes also seismology—the study of earthquakes; hydrology—the study of waters in rivers, lakes, glaciers and underground (but not in the oceans); volcanology—the study of volcanoes and the earth's heat; tectonophysics—the study of the forces that build mountains and slowly cause changes in level of land and sea; the study of the earth's gravity; and several minor studies such as the determination of the ages of ancient rocks and minerals from their content of radioactive elements. In addition magnetic, electrical, gravitational, seismic and radioactive methods of geophysical prospecting are used to direct drilling in almost all the searches going on in Canada for oil and gas. Both airborne and ground devices are widely used by mining companies to prospect for metals.

The Dominion Observatory, the Geological Survey at Ottawa and the Physics Department of the University of Toronto are carrying out major programs of geophysical research. Several other universities across the country and various provincial governments are also doing geophysical work while the major oil companies as well as many other prospecting establishments have developed geophysical techniques as their most effective approach to the problem of finding oil fields and mineral deposits. A detailed study of these activities is given in the 1956 Year Book, pp. 42-55.

Of particular current interest is the international program of scientific work known as the International Geophysical Year, which is designed to make a concentrated study of the physics of the earth and its atmosphere. This program and Canada's part in it is described in the following special article.

THE INTERNATIONAL GEOPHYSICAL YEAR*

The International Geophysical Year is a world-wide organization by scientists, the objective of which is to concentrate on measurements of the earth and its atmosphere for a period of eighteen months. Eighteen months were chosen because of climatic differences between the Arctic and Antarctic. Access is convenient during the warm periods in the two areas which, of course, are six months apart.

This is the third such program of international scientific co-operation. The first two in 1882-83 and 1932-33 were known as International Polar Years and were limited to geophysical measurements in polar areas, mostly in the Arctic. The current effort was expanded to include the whole earth. The program was planned mainly for the solution of problems that require measurements over the whole surface of the earth for their solution.

The period selected was from July 1, 1957 to Dec. 31, 1958. At the time of writing this period is about three-quarters completed but it is still too early to present the results of the effort in any detail. Some of the data obviously cannot be analysed completely until the program is over and in many phases of the work it is several months before the results can be put in a form for distribution. For instance, an examination of the reports from World Data Centres shows that on July 1, 1958, when the IGY was two-thirds completed, on the average only about six months' data had been received.

A note about the distribution of data may be of interest. Four World Data Centres have been organized by the International Committee for the IGY. The two primary centres (A and B) are in the United States and in the Union of Soviet Socialist Republics. The other two centres (C and D) are in Western Europe and in Japan. The exact location of the Data Centre in each case depends on the discipline and the centres are located in the most obvious headquarters for research in the project concerned. For instance, in the United States the World Data Centre A for meteorology is in the United States Weather Bureau at Washington while for the ionosphere it is at the Central Radio Propagation Laboratories of the National Bureau of Standards at Boulder, Colorado.

These World Data Centres have the duty of maintaining a catalogue and copies of all the IGY data, which will be considerable in volume. All of the 3,500 proposed IGY stations (it is not known at the time of writing how many actually have been established but the numbers proposed that could not be established is not expected to be large) were asked to send their data to all four Data Centres although it was agreed that if four copies were not available one Data Centre would reproduce it for the others. Further distribution is being made to any research group taking part in the IGY on payment of the cost of reproduction.

The fifteen disciplines are listed as follows:—

- | | |
|--------------------------------|---|
| I. World Days | IX. Glaciology |
| II. Meteorology | X. Oceanography |
| III. Geomagnetism | XI. Rockets and Satellites |
| IV. Aurora and Airglow | XII. Seismology |
| V. Ionosphere | XIII. Gravity |
| VI. Solar Activity | XIV. Radioactivity in the Earth's
Atmosphere |
| VII. Cosmic Rays | XV. Meteor Studies |
| VIII. Longitudes and Latitudes | |

Meteor Studies is not included as a separate field in the international program but is listed separately in the Canadian program because the study of the upper atmosphere by the examination of meteor trails is an important subject in the National Research Council's Upper Atmosphere Research Group. In the 1957-58 edition of the Canada Year Book at pp. 35-37 there is a short review of the objectives in each of these disciplines. The first, *World Days*, should hardly be considered a discipline but since a working committee was formed for it parallel to those in the other divisions of geophysics it is listed as such. Certain periods known as world days or world intervals have been chosen during which a

* Prepared by Dr. D. C. Rose, Chairman of the Co-ordinating Committee, Canadian IGY Program, National Research Council, Ottawa.

special effort is made in the types of measurements that are difficult or too expensive to carry out continuously. The problem of communications and rapid exchange of information was one that arose particularly because a series of world days were planned that could not be selected in advance but were called often on short notice when solar, magnetic, ionosphere and aurora observations suggested unusually enhanced solar activity. A predicting centre for such days was set up at Fort Belvoir, Virginia, near Washington. Up to July 1, 1958, that is during the first year of the IGY, the number of alerts broadcast was 27 and 13 special world intervals were called. However, by far the largest part of the program was organized on a continuous basis and in such cases the calling of special world intervals makes very little difference to the measurements taken. Expensive experiments like the firing of rockets into the upper atmosphere might depend on the prediction of solar activity but usually these have to be carried out very close to a time planned in advance and often cannot be held to await some unusual activity on the sun. The world intervals that were planned in advance of the program, such as quarterly periods of ten days during which enhanced meteorological measurements are taken, do not involve any special problems in communications.

A very dominant part of the whole IGY program is a study of the effect of the sun on the geophysical phenomena that strongly influence man's environment on the surface of the earth. This applies to very practical problems like studies in meteorology and radio propagation as well as more academic research on the radiation from the sun that is completely absorbed by the atmosphere and, therefore, can be measured only indirectly or by penetrating the atmosphere with balloon-borne, rocket-borne or satellite-borne instruments. The disciplines concerned are meteorology, geomagnetism, aurora and air-glow, ionosphere, solar activity, cosmic rays and rockets and satellites. Rockets and satellites are, of course, a means to the objective of taking measurements outside the atmosphere but the science of firing them when and where desired and of constructing useful measuring instruments in the space available and of light weight justifies treatment as a specialty.

Much of the upper atmosphere phenomena, such as the electric currents that are believed to cause magnetic storms, changes in the electron density in the ionosphere and the incidence of aurorae are caused in some way by streams of charged particles coming from the sun. These are influenced by the earth's magnetic field in a way that the resulting phenomena show most interesting variations in regions near the magnetic poles. For instance, aurorae are most frequent in a roughly circular band about 20° away from the geomagnetic poles. Churchill in northern Manitoba happens to be just about the centre of this band. In fact Canada has the only readily accessible territory in the world that adequately crosses the aurora band and where stations can be established not only on the band but well north of it. It is not unnatural therefore that in planning the Canadian program responsibilities in this regard were taken very seriously and as tight a chain of stations as was practical were planned. Every station planned in the national report of 1957* has been established in some form. In a few cases, instrumental difficulties or difficulties in getting staff or accommodation at remote points has been a limiting factor but it is no exaggeration to say that Canada's program has been carried out almost as planned, and it is anticipated that at least 90 p.c. of the data that was suggested in the Canadian program will be available when the IGY is over.

Perhaps the most spectacular results of the IGY that can be presented now (October 1958) are the results from measurements taken in rockets and satellites. The general objectives of these experiments are to study the physical and chemical properties of the atmosphere at heights that can be reached only by such techniques and to study radiation from the sun and sky at wave lengths that do not penetrate the atmosphere; the atmosphere is practically opaque to all light or electromagnetic radiation of shorter wave length than the violet end of the visible spectrum. This means that the radiation from the sun or skies cannot be observed in the ultra-violet, soft X-ray, or X-ray region. Even the very

* *The Canadian Program for the International Geophysical Year*, May 1957, published by the Associate Committee on Geodesy and Geophysics of the National Research Council.

penetrating cosmic rays that reach the earth's surface are secondary particles, or radiation generated in the atmosphere by interactions between primary cosmic rays and the nuclei of air atoms.

It is well known that radiation or streams of particles from the sun are responsible for chemical changes in the upper atmosphere, such as the formation of ozone and for keeping the highly ionized layers known as the ionosphere in an active state, but until rockets and satellites became practical scientific instruments, only deductions from indirect measurements indicated anything about the chemical and physical processes involved. Reflection of radio waves gives the electron density up to about 300 kilometers. The spectroscopy of the night sky and aurora in the visible spectrum tells something about the chemical composition but still leaves large gaps in the knowledge of the chemical composition, the nature of the radiation responsible for the ionization and of the distribution of pressure, density and temperature. Though the average radiation from the sun is very constant, in the ultra-violet and X-ray region and the streams of particles from the sun, the intensity is extremely variable.

For detailed results of the rocket and satellite measurements it is necessary to consult scientific publications but a few highlights may be presented here. The density of the gas at satellite orbit heights in the atmosphere is several times higher than was anticipated. The temperature rises rapidly above a minimum at about 80 kilometers and in fact it is generally becoming accepted that the earth is travelling in the atmosphere of the sun, that is, the solar corona extends to the orbit of the earth.

In an attempt to measure cosmic ray particles, the United States satellite group found a very intense layer of energetic particles starting at about 300 kilometers and increasing in numbers up to the maximum height of their measurements (1,600 kilometers). Many more measurements are necessary to decide whether these are electrons or protons or a mixture of the two and to study their spectrum and the height to which the layer extends. Such measurements as have been presented suggest that a human being travelling at the upper level where measurements are being taken might be exposed to two roentgens per hour. The comparison of this with the usually accepted safety tolerance for continuous exposure of about one-tenth of a roentgen per week indicates the great need for more knowledge.

The rocket and satellite program in countries like the United States, the Union of Soviet Socialist Republics and the United Kingdom was started before the IGY though, without doubt, the IGY organization gave it considerable stimulus in all countries. Certainly the IGY international meetings have created an excellent forum for the exchange of interesting scientific results and recent experience shows the value of such exchanges in reducing serious conflicts between countries of different political ideologies.

Canada's part in the rocket and satellite program has not been negligible even though no specific program was undertaken by this country. The United States has established a unique rocket launching facility at Churchill. This facility is designed for scientific work and during the IGY there has been no military objective included so that the whole range is operating for purely scientific purposes. The Canadian Armed Services act as hosts to the American group and the Defence Research Board's Northern Laboratory at Churchill supplies laboratory space and facilities. The Canadian Armament Research and Development Establishment at Valcartier is using two United States rockets for upper atmosphere investigations in infrared radiation. The Department of Transport takes part in the necessary meteorological work and in communications. The University of Saskatchewan's Aurora Research Group is carrying out some of the ground measurements on aurora to facilitate the actual firing of rockets into auroral displays.

The question of the continuation of the IGY was raised at a meeting of the International Committee on the IGY in Moscow in August 1958. The scientists in some countries feel that the measurements being taken and data exchanged are of such great value that the whole program should be continued at least until the end of 1959, one year longer than

originally planned. A recommendation for continuation has been adopted but some curtailment of the program soon after the end of 1958 is certain in countries that undertook extensive enlargement of their geophysical research on a temporary basis.

These notes have emphasized the highlights of the international program rather than a review of the Canadian program. In summary it can be said that Canadian scientists are active in all fifteen disciplines. Government agencies concerned include the Department of Mines and Technical Surveys, Department of National Defence, National Research Council, Department of Transport, and Fisheries Research Board. Several Canadian universities take a prominent part in the work. The Canadian program is decentralized to a large extent among leading groups in the various disciplines but is co-ordinated by a small committee appointed by the National Research Council with headquarters at Ottawa.

Section 2.—Astronomy

The modern era of astronomy in Canada may be said to have begun in 1905 with the completion of the Dominion Observatory, the national observatory of Canada. Prior to that an astronomical observatory established in 1851 at Fredericton, N.B., was used for a short time to determine the longitude of that centre and for general astronomical purposes; it has recently been rehabilitated as a historic monument. Other small observatories were established, one at Quebec City in 1854 and one at Kingston in 1875. Astronomical instruments were to be associated with the Magnetic Observatory built by the British Government at Toronto in 1839 but there is no record of them being set up until 1881. A small observatory established at McGill University in 1879 was used for many years for time observations.

Today the science of astrophysics is carried on mainly by three Canadian institutions: the Dominion Observatory at Ottawa, Ont., the Dominion Astrophysical Observatory at Victoria, B.C., both of which are administered by the Department of Mines and Technical Surveys, and the David Dunlap Observatory associated with the University of Toronto. Of the two Government institutions, the Dominion Observatory at Ottawa specializes mainly in the astronomy of position, in solar physics and in various branches of geophysical work, while the major effort in astrophysics is concentrated at the Dominion Astrophysical Observatory at Victoria. A new observatory for the study of radio astronomy is being erected at White Lake near Penticton, B.C., and will be jointly operated by the Dominion Observatory and the Dominion Astrophysical Observatory. The David Dunlap Observatory, founded in 1935, is equipped with very fine astrophysical instruments of a kind similar to those in use at Victoria. It performs not only the functions of a privately financed and administered research institution but is also the nucleus of the Department of Astronomy at Toronto University. In addition to the work of these three major institutions and a number of smaller observatories, investigations in the field of meteoric astronomy and radio astronomy are conducted by the National Research Council.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

PART I.—CONSTITUTION OF CANADA

The Canadian federal state was established by the British North America Act, 1867, which united the three British North American provinces of Canada, New Brunswick and Nova Scotia into one country, divided into four provinces, namely, Ontario, Quebec, New Brunswick and Nova Scotia. British Columbia entered the Union in 1871 and Prince Edward Island in 1873. The Province of Manitoba was created in 1870 and the Provinces of Saskatchewan and Alberta in 1905 out of portions of the territories formerly held by the Hudson's Bay Company which had been admitted to the Union in 1870. Newfoundland entered the Union in 1949. Canada now consists of ten provinces and two territories known as the Yukon Territory and the Northwest Territories.

The British North America Act of 1867 divided both legislative and executive authority between Canada and the provinces. Judicial authority was not similarly divided, federal and provincial courts having jurisdiction with respect to both federal and provincial laws.

Although the British North America Act of 1867 and its subsequent amendments is popularly regarded as the Constitution of Canada, it is not an exhaustive statement of the laws and rules by which Canada is governed. The Constitution of Canada in its broadest sense includes other statutes of the United Kingdom Parliament (e.g., the Statute of Westminster, 1931), statutes of the Parliament of Canada relating to such matters as the succession to the Throne, the demise of the Crown, the Governor General, the Senate, the House of Commons, electoral districts, elections, Royal Style and Titles, and also statutes of provincial legislatures relating to provincial government and provincial legislative assemblies. Other written instruments such as the Royal Proclamation of 1763, early instructions to Governors, Letters Patent creating the offices of Governors and

Governors General, and Orders in Council passed pursuant to the British North America Act also form part of the Canadian constitutional system. In addition the Constitution of Canada includes well-established usages and conventions. The preamble to the British North America Act states that it was the desire of the original provinces to be united "with a constitution similar in principle to that of the United Kingdom" and, accordingly, many of the usages and conventions of government that have been developed in the United Kingdom over the centuries are followed in Canada. For example, the Cabinet system of responsible government as developed in the United Kingdom obtains in Canada although no mention thereof is made in the British North America Act.

No provision was made in the British North America Act of 1867 for amendment thereof by any legislative authority in Canada but both the Parliament of Canada and the provincial legislatures were given legislative jurisdiction with respect to some matters relating to government. Thus, for example, the Parliament of Canada was given jurisdiction with respect to the establishment of electoral districts and election laws and the privileges and immunities of Members of the House of Commons and the Senate, and each provincial legislature was empowered to amend the constitution of the province except as regards the office of Lieutenant-Governor. By an amendment to the British North America Act passed in 1949 the authority of the Parliament of Canada to legislate with respect to constitutional matters was considerably enlarged and it may now amend the Constitution of Canada except as regards the legislative authority of the provinces, the rights and privileges of provincial legislatures or governments, schools, the use of the English or the French language, and the duration of the House of Commons other than in time of real or apprehended war, invasion or insurrection.

Canada's Status in the Commonwealth of Nations.*—The several stages in the development of the status of Canada have been authoritatively described in the reports of successive Imperial Conferences including that held at London in 1926 which defined the group of self-governing communities consisting of the United Kingdom and the Dominions as "autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations". That Conference also recognized that, as a consequence of this equality of status, the Governor General of a Dominion "is the representative of the Crown, holding in all essential respects the same position in relation to the administration of public affairs in the Dominion as is held by His Majesty the King in Great Britain", and that "it is the right of the Government of each Dominion to advise the Crown in all matters relating to its own affairs". Simultaneously with this change in the constitutional relationship between the several parts of the British Commonwealth of Nations there developed as a complementary aspect of nationhood the assumption by the several Dominions of further responsibilities and rights of sovereign States in their relations with other members of the community of nations. Membership in the League of Nations and more recently in the United Nations, the exercise of treaty-making powers and the establishment of separate diplomatic representation in a number of foreign countries have characterized this phase in the growth of Canada. More explicit recognition of the implications of the principles of equality of status was accorded in the Statute of Westminster of 1931 which provided for the removal of the remaining limitations on the legislative autonomy of the Commonwealth nations.

Thus Canada, under the Crown, has equality of status with the United Kingdom and the other Commonwealth nations in both domestic and foreign affairs; its Government advises the Crown in the person of the Governor General on all matters relating to Canada. Canada has membership in the United Nations; makes its own treaties; appoints its own ambassadors and other representatives abroad; levies its own taxes; makes its own laws which are executed by a government dependent on the will of a majority of the people; and maintains its own naval, military and air forces. In short, Canada has achieved full status of democratic nationhood within the Commonwealth of Nations.

* A more detailed account is given in the 1952-53 Year Book, pp. 101-104.

1.—Provinces and Territories of Canada, Dates of Admission to Confederation, Legislative Processes by which Admission was Effected and Present Areas

Province, Territory or District	Date of Admission or Creation	Legislative Process	Present Area (sq miles)

Canada.....			3,851,509

¹ The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (2 Geo. V, c. 40).

² Extended by Quebec Boundaries Extension Act, 1912 (2 Geo. V, c. 45) and diminished Mar. 1, 1927 in consequence of the Award of the Judicial Committee of the British Privy Council whereby approximately 112,000 sq. miles of territory (formerly considered as part of Quebec) was assigned to Newfoundland.

³ Extended by the Extension of Boundaries Act of Manitoba, 1881, and the Manitoba Boundaries Extension Act, 1912 (2 Geo. V, c. 32).

⁴ Saskatchewan and Alberta created as provinces in 1905 from the area formerly comprised in the provisional districts of Assiniboia, Athabasca, Alberta and Saskatchewan established May 17, 1882, by minute of Canadian Privy Council concurred in by Dominion Parliament and Order in Council, Oct. 2, 1895.

⁵ By an Imperial Order in Council passed on June 23, 1870, pursuant to the Rupert's Land Act, 1868 (31-32 Vict., c. 105) the former territories of the Hudson's Bay Company known as Rupert's Land and the North-Western Territory were transferred to Canada effective July 15, 1870. These territories were designated as the North-West Territories by the Act of 32-33 Vict., c. 3 and as the Northwest Territories by R.S.C. 1906, c. 62. By Imperial Order in Council of July 31, 1880 (effective Sept. 1, 1880) all British territories and possessions in North America not already included within Canada and all islands adjacent thereto (with the exception of the Colony of Newfoundland and its dependencies) were annexed to Canada and these additional territories were formally included in the North-West Territories by 4-5 Edw. VII, c. 27. The Province of Manitoba was formed out of a portion of the territories by the Manitoba Act, 1870 (33 Vict., c. 3) and a further portion was added to Manitoba in 1881 by 44 Vict., c. 14. The Provinces of Alberta and Saskatchewan were formed out of portions of the territories in 1905 and in 1912 other portions were added to Manitoba, Ontario and Quebec.

⁶ By 39 Vict., c. 21, a separate district to be known as the District of Keewatin was established and provision was made for the local government thereof. The Act was expressed to come into force by proclamation. It provided that portions of the District might be re-annexed to the North-West Territories by proclamation; in 1886 a portion of the District of Keewatin was re-annexed and in 1905 the entire Keewatin District was re-annexed. The Act of 39 Vict. was never proclaimed. By Order in Council of May 8, 1882 the provisional districts of Assiniboia, Saskatchewan, Alberta and Athabasca were created for the convenience of settlers and for postal purposes. By Order in Council of Oct. 2, 1895, the further provisional districts of Ungava, Franklin, Mackenzie and Yukon were created. The boundaries of these provisional districts were re-defined by Order in Council of Dec. 18, 1897. Subsequently the Yukon Territory was formed, the Provinces of Alberta and Saskatchewan were created and other portions of the territories were annexed to Quebec, Ontario and Manitoba. By Order in Council, dated Mar. 16, 1918 (effective Jan. 1, 1920) the remaining portions of the Northwest Territories were divided into three provisional districts known as Mackenzie, Keewatin and Franklin.

⁷ The provisional district of Yukon established in 1895 was created a judicial district of the North-West Territories by proclamation issued pursuant to Sect. 51 of the North-West Territories Act (R.S.C. 1886, c. 50) on Aug. 16, 1897 and by the Yukon Territory Act (61 Vict., c. 6) was declared to be a separate Territory.

PART II.—MACHINERY OF GOVERNMENT

Section 1.—The Federal Government

Subsection 1.—The Executive

The Crown.—The British North America Act provides that “the Executive Government and authority of and over Canada is . . . vested in the Queen”. The functions of the Crown, which are substantially the same as those of the Queen in relation to the Government of the United Kingdom, are discharged in Canada by the Governor General in accordance with established principles of responsible government. The practical executive functions of government are exercised by the Cabinet.

The Queen.—The personal participation of the Queen in the functions of the Crown in Canada has been limited to such occasions as the granting of honours and awards, approval of changes in the Table of Precedence, institution of new military awards, or the periodic appointment of a Governor General. On the occasion of a royal visit, the Queen may participate in those ceremonies which otherwise are carried out in her name, such as the opening and dissolution of Parliament, the assent to Bills, and the granting of a general amnesty.

Apart from her constitutional position in relation to the various governments of the Commonwealth countries the Queen is Head of the Commonwealth and symbolizes the association of the member countries. Until 1953 the title of the Queen was the same throughout the Commonwealth. Constitutional developments put the title somewhat out of accord with the facts of the position and in December 1952 it was decided by the Prime Ministers of the Commonwealth countries meeting at London, England, that new forms of title for each country should be devised. The title for Canada was approved by Parliament and established by a Royal Proclamation on May 29, 1953. The title of the Queen, so far as Canada is concerned, now is:—

“Elizabeth the Second, by the Grace of God of the United Kingdom, Canada and Her other Realms and Territories Queen, Head of the Commonwealth, Defender of the Faith”.

2.—Sovereigns of Canada since Confederation, 1867

Name	Dynasty	Year of Birth	Date of Accession
Victoria.....	House of Hanover.....	1819	June 20, 1837
Edward VII.....	House of Saxe-Coburg and Gotha.....	1841	Jan. 22, 1901
George V.....	House of Windsor.....	1865	May 6, 1910
Edward VIII.....	House of Windsor.....	1894	Jan. 20, 1936
George VI.....	House of Windsor.....	1895	Dec. 11, 1936
Elizabeth II.....	House of Windsor.....	1926	Feb. 6, 1952

The Governor General.—The Governor General, appointed by the Queen as her personal representative on the advice of the Prime Minister of Canada, traditionally serves for a term of five years. He exercises the executive authority of the Queen in relation to the Government of Canada under Letters Patent issued under the Great Seal of Canada (revised and re-issued, effective Oct. 1, 1947) and the provisions of the British North America Acts 1867 to 1952. Acting under the recommendations of his responsible Ministers, in the Queen's name, he summons, prorogues and dissolves Parliament, assents to Bills, and exercises other executive functions.

The Governor General's annual salary and allowances provided by the Parliament of Canada are \$48,666 and \$100,000 respectively. In addition other expenses of office are provided for, including the salary of the Governor General's secretary.

The present Governor General is styled His Excellency the Right Honourable Vincent Massey, C.H. He is the first Canadian to hold this high office, and has received two extensions to his five-year term of office.

3.—Governors General of Canada since Confederation, 1867

Name	Date of Appointment	Date of Assumption of Office
VISCOUNT MONCK, G.C.M.G.....	June 1, 1867	July 1, 1867
LORD LISGAR, G.C.M.G.....	Dec. 29, 1868	Feb. 2, 1869
THE EARL OF DUFFERIN, K.P., K.C.B., G.C.M.G.....	May 22, 1872	June 25, 1872
THE MARQUIS OF LORNE, K.T., G.C.M.G.....	Oct. 5, 1878	Nov. 25, 1878

THE RIGHT HONOURABLE VINCENT MASSEY, C.H.....	Jan. 24, 1952	Feb. 28, 1952

The Cabinet.—The Cabinet is a committee of Ministers chosen by the Prime Minister generally from Members of Parliament. By convention, all members of the Cabinet must either have seats in Parliament or secure seats within a short time and, again by convention, all Ministers in charge of departments of government must be members of the House of Commons. Ministers without Portfolio can be members of either House.

The Cabinet, under the leadership of the Prime Minister, directs the business of the Commons, initiates nearly all public Bills placed before Parliament, and has complete responsibility for the initiation of taxes and the recommendation of expenditures. Following established precedent or convention, it is always responsible to the Commons. When the Cabinet (the Government) suffers defeat on a Government Bill or a vote of censure or on a motion of want of confidence in the Commons, the existing Government or Cabinet must either resign or request a dissolution from the Governor General. If it resigns, the Governor General may call on the Leader of the Opposition in the Commons to form a new Government. Alternatively, if a Government that has been defeated in the House is granted a dissolution and is defeated in the ensuing general election then, should no clear majority be indicated, the Government may decide (1) to remain in office and seek a vote of confidence in the House when it meets or (2) to resign immediately with the consequent result that the Governor General will ask the leader of the party with the highest number of members returned to form a new Government. These alternatives may also eventuate as a result of a general election subsequent to the normal dissolution of Parliament at or near the close of its statutory life.

The primary responsibility of the Governor General in either of the above circumstances is to provide the nation with a Cabinet or Ministry capable of conducting Her Majesty's Government with the support of the House of Commons.

Although appointed by the Governor General, Cabinet members are selected by the Prime Minister from among his party colleagues in such manner as to ensure, as far as possible, representation of the several geographical and political regions of the country and its principal ethnic, religious and social interests. Each Cabinet Minister generally assumes charge of one of the departments of government, although a Minister may hold more than one portfolio at the same time or he may hold one or more portfolios and one or more acting portfolios, or a Minister without Portfolio may hold one or more acting portfolios. In his acting capacity, the Minister exercises the same authority as if he were the Minister of the department.

4.—Prime Ministers since Confederation, 1867

Ministry	Prime Minister	Length of Administration
1	Rt. Hon. Sir JOHN ALEXANDER MACDONALD.....	July 1, 1867 - Nov. 5, 1873
2	Hon. ALEXANDER MACKENZIE.....	Nov. 7, 1873 - Oct. 16, 1878
3	Rt. Hon. Sir JOHN ALEXANDER MACDONALD.....	Oct. 17, 1878 - June 6, 1891
4	Hon. Sir JOHN JOSEPH CALDWELL ABBOTT.....	June 16, 1891 - Nov. 24, 1892
5	Rt. Hon. Sir JOHN SPARROW DAVID THOMPSON.....	Dec. 5, 1892 - Dec. 12, 1894
6	Hon. Sir MACKENZIE BOWELL.....	Dec. 21, 1894 - Apr. 27, 1896

¹ Any changes occurring between Sept. 1, 1958, and the date of going to press will be carried in an Appendix to this volume.

² Appointee was not necessarily sworn in on date given.

The Privy Council.—The Queen's Privy Council for Canada is composed of eighty to ninety members who are sworn of the Council by the Governor General on the advice of the Prime Minister and who retain membership for life. The Council consists chiefly of present and former Ministers of the Crown. It seldom meets as a body and its constitutional responsibilities as adviser to the Crown in respect to Canada are performed exclusively by a committee thereof consisting of the Ministers who constitute the Cabinet of the day and are also members of the Queen's Privy Council for Canada.

6.—Members of the Queen's Privy Council for Canada According to Seniority Therein as at Sept. 1, 1958

NOTE.—In this list the prefix "The Rt. Hon." indicates membership in the United Kingdom Privy Council. Clerk of the Privy Council and Secretary to the Cabinet, R. B. BRYCE; Assistant Clerk of the Privy Council, A. M. HILL.

¹ The ordinary legal limit of duration for each Parliament is five years. ² Duration of Parliament in years, months and days. The life of a Parliament is counted from the date of return of election writs to the date of dissolution, both days inclusive (B.N.A. Act, Sect. 50). ³ Date of general election. ⁴ Writs returnable. ⁵ Dissolution of Parliament. ⁶ Includes long adjournment from Nov. 29, 1956 to Jan. 8, 1957.

Subsection 2.—The Legislature

The federal legislative authority is vested in the Parliament of Canada consisting of the Queen, an Upper House styled the Senate, and the House of Commons. Bills may originate in either the Senate or the House subject to the provisions of Sect. 53 of the British North America Act, 1867, which provides that Bills for the appropriation of any part of the public revenue or the imposition of any tax or impost shall originate in the House of Commons. Bills must pass both Houses and receive Royal Assent before becoming law. In practice most public Bills originate in the House of Commons although there has been a marked increase recently in the introduction of public Bills in the Senate, at the instance of the Government, in order that Bills may be dealt with in the Senate while the Commons is engaged in other matters, such as the debate on the Speech from the Throne. Private Bills usually originate in the Senate. The Senate may delay, amend or even refuse to pass Bills sent to it from the Commons, but differences are usually settled without serious conflict. (See Chap. XXVII for current legislation.)

Under Sect. 91 of the British North America Acts, 1867-1952, the legislative authority of the Parliament of Canada extends to the following matters: the amendment of the Constitution of Canada (subject to certain exceptions); the public debt and property; the regulation of trade and commerce; unemployment insurance; the raising of money by any mode or system of taxation; the borrowing of money on the public credit; postal service; the Census and statistics; militia, military and naval service, and defence; the fixing of and providing for the salaries and allowances of civil and other officers of the Government of Canada; beacons, buoys, lighthouses and Sable Island; navigation and shipping; quarantine and the establishment and maintenance of marine hospitals; sea coast and

inland fisheries; ferries between a province and any British or foreign country or between two provinces; currency and coinage, banking, incorporation of banks and the issue of paper money; savings banks; weights and measures; bills of exchange and promissory notes; interest; legal tender; bankruptcy and insolvency; patents of invention and discovery; copyrights; Indians and lands reserved for the Indians; naturalization and aliens; marriage and divorce; the criminal law, except the constitution of courts of criminal jurisdiction, but including the procedure in criminal matters; the establishment, maintenance and management of penitentiaries; such classes of subjects as are expressly excepted in the enumeration of the classes of subjects by these Acts assigned exclusively to the legislatures of the provinces.

Under Sect. 95 the Parliament of Canada may make laws in relation to agriculture and immigration concurrently with provincial legislatures although federal legislation is paramount in the event of conflict. By the British North America Act, 1951 (14-15 Geo. VI, c. 32) it was declared that the Parliament of Canada might make laws in relation to old age pensions in Canada but no such law shall affect the operation of any provincial laws in relation to old age pensions.

The Senate.—From an original membership of 72 at Confederation the Senate, through the addition of new provinces and the general growth of population, now has 102 members, the latest change in representation having been made on the admission of Newfoundland to Confederation in 1949. The growth of representation in the Senate is traced in the 1940 Year Book, pp. 47-49, and is summarized by provinces in Table 8.

Senators are appointed for life by the Governor General by instrument under the Great Seal of Canada on the recommendation of the Prime Minister. The actual power of appointing Senators resides by constitutional usage in the Prime Minister whose advice the Governor General accepts in this regard. In each of the four main divisions of Canada, except Quebec, Senators represent the whole of the province for which they are appointed; in Quebec one Senator is appointed for each of the 24 electoral divisions of what was formerly Lower Canada. The deliberations of the Senate are presided over by a Speaker appointed by the Governor General in Council (in effect by the Government) and government business in the Senate is sponsored by the Government Leader in the Senate.

The Senate is not a competitor of the House of Commons in the field of legislation, but, in the main, acts as a second chamber giving further scrutiny to legislation initiated in the House of Commons. Under the constitution, Bills for appropriating any part of the public revenue or for imposing a tax or impost must originate in the Commons but in every other respect, since both Houses must concur in every piece of legislation, the Senate has an equal voice with the House of Commons.

9.—Members of the Senate by Province as at Sept. 1, 1958¹

Speaker.....	The Hon. MARK ROBERT DROUIN
Leader of the Government.....	The Hon. WALTER M. ASSETINE
Leader of the Opposition.....	The Hon. WILLIAM ROSS MACDONALD
Clerk of the Senate and Clerk of the Parliaments...	JOHN FORBES MACNEILL

(Ranked according to seniority, by province. All Senators are entitled to the designation "The Honourable".)

Province and Name of Senator	P.O. Address	Province and Name of Senator	P.O. Address

¹ Any changes occurring between Sept. 1, 1958, and the date of going to press will be carried in an Appendix to this volume.

The House of Commons.—The British North America Act, 1867, provided that in respect of representation in the House of Commons the Province of Quebec should have the fixed number of sixty-five members and that there should be assigned to each of the other provinces such a number of members as would bear the same proportion to the number of its population as the number sixty-five bears to the number of the population of Quebec. This Act also provided that on the completion of a census in 1871 and of each subsequent decennial census the representation of the several provinces should be re-adjusted from time to time provided the proportionate representation of the provinces as prescribed by the Act was not thereby disturbed.

In the session of 1946 the House of Commons adopted a resolution stating that the effect of the provisions of the British North America Act relating to representation had not been satisfactory in that proportionate representation of the provinces according to population had not been maintained and that a more equitable apportionment of members to the various provinces could be effected if readjustments were made on the basis of the population of all the provinces taken as a whole. The Act was amended accordingly in 1946 to provide a new rule to regulate representation in the House of Commons. Generally speaking, representation was fixed as follows:—

The membership assigned to each province shall be computed by dividing the total population of the provinces by two hundred and fifty-four and by dividing the population of each province by the quotient so obtained.

This rule, employed in the redistribution of representation made in 1947, was effective in the general election of 1949.

After the completion of the 1951 Census it was apparent that as a result of a wartime shift of population a substantial reduction in the representation of the Province of Saskatchewan would ensue under the rules then regulating representation. Accordingly, in an effort to eliminate sharp reductions in provincial representation from one census to another, the British North America Act was again amended to provide representation on the following basis:—

"Sect. 51.—(1) Subject as hereinafter provided, the number of members of the House of Commons shall be two hundred and sixty-three and the representation of the provinces therein shall forthwith upon the coming into force of this section and thereafter on the completion of each decennial census be readjusted by such authority, in such manner, and from such time as the Parliament of Canada from time to time provides, subject and according to the following rules:—

"1. There shall be assigned to each of the provinces a number of members computed by dividing the total population of the provinces by two hundred and sixty-one and by dividing the population of each province by the quotient so obtained, disregarding, except as hereinafter in this section provided, the remainder, if any, after the said process of division.

"2. If the total number of members assigned to all the provinces pursuant to rule one is less than two hundred and sixty-one, additional members shall be assigned to the provinces (one to a province) having remainders in the computation under rule one commencing with the province having the largest remainder and continuing with the other provinces in the order of the magnitude of their respective remainders until the total number of members assigned is two hundred and sixty-one.

"3. Notwithstanding anything in this section, if upon completion of a computation under rules one and two, the number of members to be assigned to a province is less than the number of senators representing the said province, rules one and two shall cease to apply in respect of the said province, and there shall be assigned to the said province a number of members equal to the said number of senators.

"4. In the event that rules one and two cease to apply in respect of a province then, for the purpose of computing the number of members to be assigned to the provinces in respect of which rules one and two continue to apply, the total population of the provinces shall be reduced by the number of the population of the province in respect of which rules one and two have ceased to apply and the number two hundred and sixty-one shall be reduced by the number of members assigned to such province pursuant to rule three.

"5. On any such readjustment the number of members for any province shall not be reduced by more than fifteen per cent below the representation to which such province was entitled under rules one to four of this subsection at the last preceding readjustment of the representation of that province, and there shall be no reduction in the representation of any province as a result of which that province would have a smaller number of members than any other province that according to the results of the then last decennial census did

not have a larger population; but for the purposes of any subsequent readjustment of representation under this section any increase in the number of members of the House of Commons resulting from the application of this rule shall not be included in the divisor mentioned in rules one to four of this subsection.

"6. Such readjustment shall not take effect until the termination of the then existing Parliament.

"(2) The Yukon Territory as constituted by chapter forty-one of the Statutes of Canada, 1901, shall be entitled to one member, and such other part of Canada not comprised within a province as may from time to time be defined by the Parliament of Canada shall be entitled to one member." (R.S.C. 1952, c. 304.)

The principal effect of these latest rules is that the representation of any province shall not be reduced by more than 15 p.c. at any one readjustment subject however to the qualification that the rule shall not work out in such manner that the representation of a province with a smaller population shall be greater than any province with a larger population.

Subsequently Parliament enacted a measure, "An Act to readjust the Representation in the House of Commons, 1952", effective in the general election of 1953, which provided that representation in the House of Commons shall be on the following basis:—

"Sect. 2.—Eighty-five members of the House of Commons shall be elected for the Province of Ontario, seventy-five for the Province of Quebec, twelve for the Province of Nova Scotia, ten for the Province of New Brunswick, fourteen for the Province of Manitoba, twenty-two for the Province of British Columbia, four for the Province of Prince Edward Island, seventeen for the Province of Saskatchewan, seventeen for the Province of Alberta, seven for the Province of Newfoundland, one for the Yukon Territory and one for Mackenzie district of the Northwest Territories, thus making a total of two hundred and sixty-five members." (R.S.C. 1952, c. 344.)

The number of representatives of each province elected at each of the 23 general elections since Confederation is given in Table 10.

Under their parliamentary system of representation, based on a "constitution similar in principle to that of the United Kingdom", the people of Canada elect representatives having various political party affiliations as shown in Table 11. In a general election, the Canadian electorate not only determines what political party leader shall be called on to form the Government of the day, but it also decides which of the parties is to become the Official Opposition. Her Majesty's Loyal Opposition occupies an essential place in constitutions based on the British parliamentary system, in that its function is to oppose or criticize in debate the Government in power—an essential to good government at all times. The Official Opposition is founded, like such institutions as the Cabinet and the Prime Ministership, on unwritten custom that has become firmly established. Although the position of Leader of the Opposition is not recognized in the British North America

Act, it received statutory acknowledgment in the Canadian Parliament in 1905 when the Senate and House of Commons Act (4-5 Edw. VII, c. 43, Sect. 2) provided an additional sessional allowance to "the member occupying the recognized position of Leader of the Opposition in the House of Commons".

11.—Electoral Districts, Voters on List and Votes Polled, Names and Addresses of Members of the House of Commons as Elected at the Twenty-Fourth General Election, Mar. 31, 1953, and Revised to Sept. 1, 1953.¹

Speaker.....	The Hon. ROLAND MICHENER
Prime Minister.....	The Rt. Hon. JOHN GEORGE DIEFENBAKER
Leader of the Opposition.....	The Hon. LESTER B. PEARSON
Clerk of the House of Commons.....	LÉON J. RAYMOND

NOTE.—The vote is summarized by provinces in Table 12, p. 76. The leaders of the political parties are indicated by asterisks (*). This information, except the population of constituencies, has been supplied by the Chief Electoral Officer. Party affiliations are unofficial. P.C.=Progressive Conservative; Lib.=Liberal; C.C.F.=Co-operative Commonwealth Federation; L-Lab.=Liberal Labour.

Indemnities and Allowances.—Members of the Senate receive a sessional allowance at the rate of \$8,000 per annum. In addition they receive at the end of each calendar year an annual expense allowance of \$2,000 which is subject to income tax. Members of the House of Commons are paid a sessional allowance at the rate of \$8,000 per annum. In addition they receive \$2,000 as an expense allowance paid at the end of each calendar year. This allowance, except that for Ministers of the Crown and for Leaders of the Opposition in the House and in the Senate, is not subject to income tax. The remuneration of the Prime Minister is \$25,000 a year and of a Cabinet Minister and the Leader of the Opposition \$15,000 a year in addition to the sessional allowance and expense allowance each receives as a Member of Parliament. A Cabinet Minister is also entitled to a motor car allowance of \$2,000. The remuneration of a Minister without Portfolio is \$7,500 a year in addition to the sessional allowance and expense allowance. The Speakers of the Senate and of the House of Commons each receive, besides the sessional allowance and expense allowance, a salary of \$9,000 and a motor car allowance of \$1,000 and each is entitled to \$3,000 in lieu of a residence. The Deputy Speaker of the House of Commons receives a salary of \$6,000 and an allowance of \$1,500 in lieu of a residence. The Deputy Chairman of Committees receives an annual allowance of \$2,000. Parliamentary Assistants to the Ministers of the Crown receive \$8,000 sessional allowance as Members of Parliament, \$4,000 a year as Parliamentary Assistants and the \$2,000 expense allowance paid to all Members of Parliament.

The Federal Franchise.—The present federal franchise laws are contained in the Canada Elections Act (R.S.C. 1952, c. 23). The franchise is conferred upon all Canadian citizens or British subjects, men and women, who have attained the age of 21

years and who have been ordinarily resident in Canada for 12 months prior to polling day at a federal election and ordinarily resident in the electoral district on the date of the issue of the writ ordering such election. Persons denied the right to vote are:—

- (1) The Chief Electoral Officer and the Assistant Chief Electoral Officer;
- (2) Judges appointed by the Governor General in Council;
- (3) The returning officer for each electoral district;
- (4) Persons undergoing punishment as inmates of any penal institution for the commission of any offence;
- (5) Indians ordinarily resident on an Indian reserve who were not members of His Majesty's Forces in World Wars I or II or who did not execute a waiver of exemption under the Indian Act from taxation on and in respect of personal property;
- (6) Persons restrained of their liberty or deprived of the management of their property by reason of mental disease;
- (7) Persons disqualified under any law relating to the disqualification of electors for corrupt and illegal practices.

The Canadian Forces Voting Regulations set out in the Schedule to the Canada Elections Act prescribe voting procedure for members of the Armed Forces of Canada and also for veterans in receipt of treatment or domiciliary care in certain institutions.

12.—Voters on the Lists and Votes Polled at the Federal General Elections of 1949, 1953, 1957 and 1958

NOTE.—Corresponding statistics for the general elections of 1911, 1917, 1921 and 1925 are given in the 1926 Year Book, p. 82; those for 1926 in the 1945 edition, p. 66; those for 1930 and 1935 in the 1948-49 edition, p. 94; those for 1940 in the 1956 edition, p. 81; and for 1945 in the 1957-58 edition, p. 57.

¹ Each voter in the double-member constituency of Queens County, P.E.I., had two votes; in 1958, 24,930 voters on the list cast 42,954 votes.

² Each voter in the double-member constituency of Halifax, N.S., had two votes; in 1958, 112,253 voters on the list cast 179,287 votes.

³ Electoral District of Yukon.

⁴ Electoral District of Mackenzie River.

Subsection 3.—The Judiciary

The Federal Judiciary

The Parliament of Canada is empowered by Sect. 101 of the British North America Act to provide from time to time for the constitution, maintenance and organization of a general Court of Appeal for Canada and for the establishment of any additional courts for the better administration of the laws of Canada. Under this provision, Parliament has established the Supreme Court of Canada, the Exchequer Court of Canada and certain miscellaneous courts.

Supreme Court of Canada.—This Court, first established in 1875 and now governed by the Supreme Court Act (R.S.C. 1952, c. 259), consists of a chief justice who is called the Chief Justice of Canada, and eight puisne judges. The chief justice and the puisne judges are appointed by the Governor in Council and they hold office during good behaviour but are removable by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and exercises general appellate jurisdiction throughout Canada in civil and criminal cases. The Court is also required to consider and advise upon questions referred to it by the Governor in Council and it may also advise the Senate or the House of Commons on private Bills referred to the Court under any rules or orders of the Senate or the House of Commons.

Appeals may be brought from any final judgment of the highest court of final resort in a province in any case where the amount or value of the matter in controversy exceeds the sum of \$10,000. An appeal may be brought from any other final judgment with leave of the highest court of final resort in the province; if such court refuses to grant leave the Supreme Court of Canada may grant leave to appeal. The Supreme Court may grant leave to appeal from any judgment whether final or not. Appeals in respect of indictable offences are regulated by the Criminal Code. Appeals from federal courts are regulated by the statute establishing such courts. The judgment of the Supreme Court of Canada in all cases is final and conclusive.

13.—Chief Justice and Judges of the Supreme Court of Canada as at Sept. 1, 1958

(In order of seniority)

Name	Date of Appointment
The Hon. Chief Justice PATRICK KERWIN.....	July 1, 1954 ¹
The Hon. Justice ROBERT TASCHEREAU.....	Feb. 9, 1940
The Hon. Justice I. C. RAND.....	Apr. 22, 1943
The Hon. Justice CHARLES H. LOCKE.....	June 3, 1947
The Hon. Justice JOHN R. CARTWRIGHT.....	Dec. 23, 1949
The Hon. Justice J. H. GERALD FAUTEUX.....	Dec. 23, 1949
The Hon. Justice DOUGLAS CHARLES ABBOTT.....	July 1, 1954
The Hon. Justice RONALD MARTLAND.....	Jan. 15, 1958
The Hon. Justice WILFRED JUDSON.....	Feb. 5, 1958

¹ First appointed as a Judge of the Supreme Court, July 20, 1935.

Exchequer Court.—The Exchequer Court of Canada was first established in 1875 as part of the Supreme Court of Canada but is now a separate court governed by the Exchequer Court Act (R.S.C. 1952, c. 98). The Court consists of a president and four puisne judges who are appointed by the Governor in Council. The president and the puisne judges hold office during good behaviour but may be removed by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and also at any other place in Canada where sittings may be fixed by the Court. The jurisdiction of the Court extends to cases where claims are made by or against the Crown in right of Canada. Proceedings against the Crown are taken by petition of right pursuant to the Petition of Right Act (R.S.C. 1952, c. 210).

An appeal lies to the Supreme Court of Canada from any final judgment of the Exchequer Court in which the amount in controversy exceeds \$500; an appeal also lies with leave of the Supreme Court in certain cases where the amount in controversy does not exceed \$500 or where the judgment is not final.

The Exchequer Court also exercises admiralty jurisdiction in Canada. This was first conferred in 1891 by the Admiralty Act (54-55 Vict., c. 29) and is now governed by the Admiralty Act (R.S.C. 1952, c. 1). Under this Statute the Exchequer Court is continued as a Court of Admiralty. The president and puisne judges of the Exchequer Court

exercise admiralty jurisdiction throughout the whole of Canada. In addition, Canada is divided into various admiralty districts; a district judge in admiralty is appointed for each district. Appeals to the Supreme Court of Canada from judgments of the president or the puisne judges are governed by the general appeal provisions in the Exchequer Court Act. Appeals may be taken from a final judgment of a district judge in admiralty either to the Exchequer Court or direct to the Supreme Court of Canada.

Miscellaneous Courts.—*Railway Act.*—The Railway Act, 1903 (R.S.C. 1952, c. 234) established the Board of Railway Commissioners for Canada as a court of record; by the Transport Act, 1938 (R.S.C. 1952, c. 271) the name was changed to the Board of Transport Commissioners for Canada. This Court exercises jurisdiction with respect to railway matters. The Governor in Council is given jurisdiction to vary any order of the Board and an appeal lies from the Board to the Supreme Court of Canada upon a question of jurisdiction or a question of law.

Bankruptcy Act.—By virtue of Sect. 91 (21) of the British North America Act, 1867, Parliament has exclusive legislative jurisdiction in relation to bankruptcy and insolvency. By the Bankruptcy Act (R.S.C. 1952, c. 14) the superior courts of the provinces are constituted bankruptcy courts; original jurisdiction is conferred upon the trial courts and appellate jurisdiction is conferred upon the appeal courts of the provinces.

Income Tax Act.—By the Income Tax Act (R.S.C. 1952, c. 148) an Appeal Board is established consisting of a chairman and not fewer than two or more than four members with jurisdiction over appeals against income tax assessments. A further appeal may be taken to the Exchequer Court.

Provincial and Territorial Judiciaries*

Certain provisions of the British North America Act govern to some extent the provincial judiciaries. Under Sect. 92 (14) the legislature of each province exclusively may make laws in relation to the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction. Sect. 96 provides that the Governor General shall appoint the judges of the superior, district, and county courts in each province except those of the courts of probate in Nova Scotia and New Brunswick. Sect. 100 provides that the salaries, allowances and pensions of judges of the superior, district and county courts (except the courts of probate in Nova Scotia and New Brunswick) are to be fixed and provided by the Parliament of Canada and these are set out in the Judges Act (R.S.C. 1952, c. 157). Under Sect. 99 the judges of the superior courts hold office during good behaviour but are removable by the Governor General on address of the Senate and House of Commons. The tenure of office of district and county court judges is fixed by the Judges Act as being during good behaviour and their residence within the county or union of counties for which the court is established.

All provinces have minor courts with limited civil and criminal jurisdiction, the judges of which are appointed by provincial authority as, for example, Justices of the Peace, Magistrates and Juvenile Court Judges. Except in Quebec there are County or District Courts of each province with limited jurisdiction varying from \$500 to \$2,500 in amount. Each province has a Superior Court with virtually unlimited jurisdiction variously known as Court of Queen's Bench, Supreme Court, Superior Court, etc. There is also a Court of Appeal in each province.

The Yukon Act and the Northwest Territories Act each provide for a superior court of record in and for the Territory, called the Territorial Court, and consisting of one or more judges appointed by the Governor in Council. The judges of the Territorial Court of the Yukon Territory are ex officio judges of the Territorial Court of the Northwest Territories. The superior courts of adjacent provinces exercise certain concurrent jurisdiction in civil matters. Police magistrates and justices of the peace have jurisdiction in minor civil and criminal cases.

* More detailed information concerning provincial judiciaries is given in the 1954 Year Book, pp. 48-55.

Section 2.—Provincial and Territorial Governments*

In each of the provinces, the Queen is represented by a Lieutenant-Governor appointed by the Governor General in Council. The Lieutenant-Governor acts on the advice and with the assistance of his Ministry or Executive Council which is responsible to the Legislature and resigns office under circumstances similar to those described at p. 62 concerning the Federal Government.

The Legislature of each province is unicameral, consisting of the Lieutenant-Governor and a Legislative Assembly except for the Province of Quebec where there is a Legislative Council as well as a Legislative Assembly.

The Legislative Assembly is elected by the people for a statutory term of five years but may be dissolved within that period by the Lieutenant-Governor on the advice of the Premier of the province.

The source of legislative authority of the Provincial Legislatures is the British North America Act, 1867 (30-31 Vict., c. 3 and amendments). Under Sect. 92 of the Act the Legislature of each province exclusively may make laws in relation to the following matters: amendment of the constitution of the province except as regards the Lieutenant-Governor; direct taxation within the province; borrowing of money on the credit of the province; establishment and tenure of provincial offices and appointment and payment of provincial officers; the management and sale of public lands belonging to the province and of the timber and wood thereon; the establishment, maintenance and management of public and reformatory prisons in and for the province; the establishment, maintenance and management of hospitals, asylums, charities and eleemosynary institutions in and for the province, other than marine hospitals; municipal institutions in the province; shop, saloon, tavern, auctioneer and other licences issued for the raising of provincial or municipal revenue; local works and undertakings other than interprovincial or international lines of ships, railways, canals, telegraphs, etc., or works which, though wholly situated within one province, are declared by the Federal Parliament to be for the general advantage either of Canada or of two or more provinces; the incorporation of companies with provincial objects; the solemnization of marriage in the province; property and civil rights in the province; the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction including procedure in civil matters in these courts; the imposition of punishment by fine, penalty or imprisonment for enforcing any law of the province relating to any of the aforesaid subjects; generally all matters of a merely local or private nature in the province.

Further, in and for each province the Legislature exclusively may, under Sect. 93, make laws in relation to education subject to certain restrictions relating to the establishment of schools by religious minorities. These powers with similar restrictions were conferred on the more recently admitted provinces on their inclusion as units in the federation.

The Provincial Legislatures may also make laws under Sect. 95 in relation to agriculture and immigration subject to any laws of the Parliament of Canada in relation to these subjects.

Provincial Franchise.—Details regarding qualifications and disqualifications of the franchise are contained in the Elections Act of each province. In general, every person, male or female, at the age of 21 years who is a Canadian citizen or a British subject, who complies with certain residence requirements in the province and the electoral district of polling and who falls under no statutory disqualifications, is entitled to vote. These qualifications apply with modifications to voters in most provinces. The principal exception gives voting privileges to persons in Saskatchewan at the age of 18 and in Alberta and British Columbia at 19 years.

* The information given in Subsections 1 to 9 of this Section is brought up to Sept. 1, 1953. Provincial elections held between that date and the date of going to press will be carried in an Appendix to this volume.

Subsection 1.—Newfoundland

The Government of Newfoundland consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. At Sept. 1, 1958, the Honourable Campbell Macpherson was Lieutenant-Governor of the Province. He was commissioned on Dec. 16, 1957.

The Legislative Assembly has 36 members elected for a term of five years. The Legislature elected Oct. 2, 1956, is the 31st in the history of Newfoundland and the 3rd since Confederation.

The Premier receives a salary of \$10,000 and the other Cabinet Ministers \$9,000 per annum plus a sessional indemnity of \$3,333.33. Each member of the House of Assembly receives a sessional indemnity of \$3,333.33 plus travelling and expense allowance of \$1,666.66. An additional allowance of \$3,000 is made to the Leader of the Opposition.

14.—Legislatures of Newfoundland since Confederation and Ministry as at Sept. 1, 1958

Legislatures 1949-58

Minister of Health.....	Hon. J. M. McGRATH.....	May 1, 1957	May 1, 1957

Subsection 2.—Prince Edward Island

The Government of Prince Edward Island consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. The Honourable F. Walter Hyndman, Lieutenant-Governor of the Province at Sept. 1, 1958, was commissioned to office on Mar. 31, 1958. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 86, and the 1957-58 edition, p. 62.

The General Assembly elected May 25, 1955, is the 48th in the history of Prince Edward Island Legislatures and the 23rd since Confederation. It has 30 members from 15 electoral districts who serve for a statutory term of five years. One-half of the Members

of the Legislative Assembly are elected on a property vote. Each district elects one Councillor (elected on a property vote) and one Assembly member (elected on a general franchise vote).

The annual salary of the Premier is \$6,000 and that of a Cabinet Minister \$4,000, except for the Minister of Education and the Minister of Health each of whom receives \$3,000. Every Member of the Assembly is paid the sum of \$1,450 for each session attended by him and an additional amount of \$500 tax free as indemnity for expenses incurred. The Speaker is paid an additional sum of \$400 and a further additional amount of \$200 tax free as an indemnity. The Leader of the Opposition is paid an additional sum of \$800 and a further additional amount of \$200 tax free for expenses incurred by him in performance of official duties.

Subsection 3.—Nova Scotia

The Government of the Province of Nova Scotia has a Lieutenant-Governor, an Executive Council and a House of Assembly. Major General the Honourable E. C. Plow, Lieutenant-Governor at Sept. 1, 1958, was commissioned to office Jan. 15, 1958. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 87, and the 1957-58 edition, p. 63.

The Legislature has 43 members elected for five years, the maximum duration of its existence. The Legislature elected Oct. 30, 1956, was the 46th in Nova Scotia's history and the 23rd since Confederation.

The Premier of the Province receives a salary of \$12,000 per annum and each Cabinet Minister a salary of \$10,000 per annum. Each Member of the House of Assembly receives a sessional indemnity of \$2,400 and an allowance of \$1,200 for expenses incidental to the discharge of his duties. The Leader of the Opposition receives an allowance of \$3,000 in addition to his sessional indemnity.

Subsection 4.—New Brunswick

The Government of New Brunswick has a Lieutenant-Governor, an Executive Council and a House of Assembly. The Honourable J. Leonard O'Brien, Lieutenant-Governor at Sept. 1, 1958, was commissioned to office June 6, 1958. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 89.

The Legislature elected June 18, 1956, is the 43rd in New Brunswick's history and the 16th since Confederation. It has 52 members who are elected for a statutory term of five years.

The Premier receives \$5,000 per annum in addition to the salary for any other portfolio he may hold. The salary of each Cabinet Minister is \$7,500, the amount paid as indemnity to each Member of the House of Assembly is \$2,400, plus an additional \$1,200 allowance for expenses. The Leader of the Opposition receives an additional \$3,000. An allowance of \$1,000 in addition to the regular indemnity is made to the Speaker.

Subsection 5.—Quebec

The Government of Quebec consists of a Lieutenant-Governor, an Executive Council, and a bicameral legislature—the Legislative Council and the Legislative Assembly. The Honourable Onesime Gagnon, Lieutenant-Governor at Sept. 1, 1958, was commissioned to office Feb. 14, 1958. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 90, and in the 1957-58 edition, p. 64.

The Legislative Council has 24 members nominated for life by the Lieutenant-Governor in Council. The Legislative Assembly has 93 elected members and, like the Legislative Council, has the power to bring forward Bills relating to civil and administrative matters and to the amendment or repeal of laws that already exist. A Bill to be approved by the Lieutenant-Governor must have received the assent of both Houses. Only the Legislative Assembly can bring forward a Bill requiring the expenditure of public money. The maximum life of a Legislature is five years.

Salaries and allowances of the Premier, Members of the Executive Council, Legislative Council and Legislative Assembly are fixed according to R.S.Q. 1941, c. 7 and R.S.Q. 1941, c. 4 as amended by 1-2 Eliz. II, c. 38 and 5-6 Eliz. II, c. 51. All Members of Legislative Assembly and Legislative Council receive \$5,000 per annum as salary and \$2,000 by way of allowances; in addition, the Premier receives \$10,000 as salary, \$4,000 allowances and \$2,000 for lodging allowance; Ministers with Portfolio an additional \$8,000 as salary and \$2,000 allowances; Ministers without Portfolio an additional \$5,000 salary and \$2,000 allowances; the Leader of the Opposition in the Legislative Assembly \$6,000 as salary, \$2,000 allowances and \$2,000 for lodging allowance; and the Leader of the Government in the Legislative Council and the Leader of the Opposition in the Legislative Council each receives \$7,000 as salary, \$2,000 allowances and \$3,000 for office allowances.

Subsection 6.—Ontario

The Government of Ontario consists of a Lieutenant-Governor, an Executive Council and a House of Assembly. The Honourable Justice John Keiller Mackay, Lieutenant-Governor of the province at Sept. 1, 1958, was commissioned to office Dec. 30, 1957. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 92, and in the 1957-58 edition, p. 66.

The House of Assembly, the single-chamber Legislature of the province, is composed of 98 members elected for a statutory term of five years.

Besides the regular Departments of Government, the Niagara Parks Commission, the Ontario Municipal Board, The Hydro-Electric Power Commission of Ontario, the Ontario-St. Lawrence Development Commission, the Ontario Northland Transportation Commission, the Liquor Control Board, the Liquor Licence Board, the Hospital Services Commission and The Water Resources Commission have been created.

Under the provisions of the Legislative Assembly Act (R.S.O. 1950, c. 202, with amendments) each Member of the Assembly is paid an annual indemnity of \$3,600 and an allowance for expenses of \$1,800. In addition, the Speaker receives a special indemnity at the annual rate of \$3,000 and an expense allowance of \$2,000; the Chairman of the Committee of the Whole a special indemnity at the annual rate of \$1,000; and the Leader of the Opposition a special indemnity of \$3,000 and an annual allowance of \$2,000 for expenses. Each Member of the Cabinet having charge of a Department receives the ordinary indemnity as a Member of the Legislature in addition to his salary as a Minister of the Crown. The salary provided in the Executive Council Act for the Premier is \$14,000 and for a Cabinet Minister having charge of a Department \$10,000. A Minister without Portfolio receives only the indemnity and expense allowance of a Member of the Legislature. By the 1956 amendment, every Minister of the Crown in charge of a Department, the Minister of the Crown who is a member of The Hydro-Electric Power Commission of Ontario, and the Leader of the Opposition receives a representation allowance of \$2,000 per annum.

Subsection 7.—Manitoba

Besides a Lieutenant-Governor, Manitoba has an Executive Council composed of 10 members and a Legislative Assembly of 57 members elected for a statutory term of five years. The Honourable John Stewart McDiarmid, Lieutenant-Governor of the Province at Sept. 1, 1958, was commissioned to office Aug. 1, 1953. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 94.

The Premier of the Province is paid a salary of \$10,000 per annum and each of the other Members of the Cabinet \$8,000. Members of the Legislature are each paid an indemnity of \$2,000 and an expense allowance of \$1,000. The Leader of the Opposition is paid an additional amount of \$2,500 and the Speaker of the Legislature an additional amount of \$2,500.

Subsection 8.—Saskatchewan

The Government of the Province of Saskatchewan consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. The Honourable F. L. Bastedo, Lieutenant-Governor at Sept. 1, 1958, was commissioned to office Jan. 27, 1958. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 95, and in the 1957-58 Year Book, p. 68.

The statutory number of members of the Legislative Assembly is 53, elected for a maximum term of five years.

As of Apr. 1, 1958, the Premier receives \$9,500 and each Cabinet Minister \$8,000 annually in addition to a sessional indemnity. The Leader of the Opposition receives \$5,000, the Speaker \$2,500 and the Deputy Speaker \$1,500. The sessional indemnity of a Member of the Legislature is \$3,200 together with an expense allowance of \$1,600. Members for the three northernmost constituencies of Cumberland, Athabasca and Meadow Lake each receive a \$3,500 sessional indemnity and a \$1,750 expense allowance.

Subsection 9.—Alberta

The Government of the Province of Alberta is composed of the Lieutenant-Governor, the Executive Council and the Legislative Assembly. The Honourable Dr. John J. Bowlen, Lieutenant-Governor at Sept. 1, 1958, was commissioned to office Feb. 1, 1950. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 96.

There are 61 members of the Legislative Assembly who are elected for a maximum period of five years.

The salary of the Premier is \$13,000 and of a Cabinet Minister \$10,000. Special allowances are paid as follows: the Speaker \$2,500; the Deputy Speaker \$1,500; and the Leader of the Opposition \$2,500. The sessional indemnity for each Member of the Legislative Assembly is \$2,400, plus an expense allowance of \$1,200, plus a subsistence allowance (for Members residing outside Edmonton) of \$15 for each day during the session that a member is necessarily absent from his permanent place of residence.

Subsection 10.—British Columbia

The Government of British Columbia has a Lieutenant-Governor, an Executive Council and a Legislative Assembly. The Honourable Frank Mackenzie Ross, C.M.G., M.C., LL.D., Lieutenant-Governor of the Province at Sept. 1, 1958, was commissioned to office Oct. 3, 1955. Lieutenant-Governors since Confederation are cited in the 1951 Year Book, p. 98.

The Legislative Assembly, elected for a statutory term of five years, has 52 members.

Each Member of the Executive Council and the Legislative Assembly receives a sessional allowance of \$3,400 and \$1,000 for expenses. There is also paid to each Member a living allowance of \$15 for each day's attendance at the session and for each Saturday, Sunday or holiday that intervenes between two sittings of the House; the allowance of \$15 in any session is not paid in respect of more than 40 days. Each Member also receives an allowance of 25 cents per mile of the distance between his place of residence and the city of Victoria, reckoning such distance, going and coming, according to the nearest mail route. In addition, the Premier receives a salary of \$15,000 and each Member of the Executive Council \$12,500. The Leader of the Opposition has a special allowance of \$3,500 for expenses, the Speaker receives a special allowance of \$3,500 and the Deputy Speaker an allowance of \$1,000.

Subsection 11.—Yukon and Northwest Territories

Yukon Territory.—The Yukon was created a separate Territory in June 1898. Provision is made for a local Government composed of a Chief Executive, styled Commissioner, and an elective Legislative Council of five members with a three-year tenure of office. The Commissioner administers the Government under instructions from the Governor in Council or the Minister of Northern Affairs and National Resources. The Commissioner in Council has power to make ordinances dealing with the imposition of local taxes, sale of liquor, preservation of game, establishment of territorial offices, maintenance of prisons and municipal institutions, issue of licences, incorporation of companies, solemnization of marriage, property and civil rights, administration of justice and generally all matters of a local nature in the Territory. The seat of local government is at Whitehorse, Yukon Territory.

TERRITORIAL COUNCIL

(Five members elected 1958, for three years)

Dawson.....	G. SHAW	Whitehorse East.....	C. D. TAYLOR
Mayo.....	R. L. McKAMEY	Whitehorse West.....	J. SMITH
	Carmacks.....	J. LIVESAY	

TERRITORIAL OFFICIALS

(As at Dec. 31, 1958)

Commissioner (Whitehorse).....	F. H. COLLINS
Superintendent of Works and Buildings.....	K. J. BAKER
Registrar of Vital Statistics.....	H. J. TAYLOR
Legal Adviser.....	D. S. COLLINS

The Northern Administration and Lands Branch, Department of Northern Affairs and National Resources, has the responsibility for the general administration of the natural resources of the Yukon Territory, except game. The Department maintains three lands and mining offices at various points in the Territory. Other Departments of the Federal Government including Justice, National Revenue, Transport, Post Office, and Public Works, also maintain offices in the Yukon Territory.*

Northwest Territories.—As reconstituted on Sept. 1, 1905, these comprise:—

- (1) all that part of Canada north of the Sixtieth Parallel of North Latitude, except the portions thereof within the Yukon Territory and the Provinces of Quebec and Newfoundland, and
- (2) the islands in Hudson Bay, James Bay and Ungava Bay, except those islands within the Provinces of Manitoba, Ontario and Quebec.

The Northwest Territories Act (R.S.C. 1952, c. 331) provides for the appointment of a Commissioner to administer the government of the Territories under instructions given from time to time by the Governor in Council or the Minister of Northern Affairs and National Resources. As a matter of practice the appointment is held by the Deputy Minister of Northern Affairs and National Resources. For administrative purposes the Territories are divided into the provisional districts of Mackenzie, Keewatin and Franklin (Order in Council dated Mar. 16, 1918). The Northwest Territories Act, as amended, also provides for a Council of nine members, four of whom are elected in the Mackenzie District and five of whom are appointed by the Governor in Council. The Commissioner in Council has legislative powers respecting such matters as direct taxation, establishment and tenure of territorial offices, municipal institutions, controverted elections, licences, incorporation of companies, property and civil rights, administration of justice, game, education, hospitals and generally all matters of a merely local or private nature. The Council meets once each year in the Territories and at least once each year in Ottawa which is the seat of government. The resources, except game, remain under the control of the Federal Government. The administration of legislation passed by the Commissioner in Council and the management of resources under federal legislation are carried on by the Northern Administration and Lands Branch of the Department of Northern Affairs and National Resources. Administrative offices are located in the Territories at Fort Smith, Yellowknife, Hay River and Aklavik.

COUNCIL OF THE NORTHWEST TERRITORIES

(As at Dec. 6, 1958)

Commissioner.....	R. G. ROBERTSON
Deputy Commissioner.....	W. G. BROWN

Officers of the Council—	
Secretary.....	R. A. BISHOP
Legal Adviser.....	E. R. OLSON

* Further information on officials of various Federal Government Departments serving Yukon Territory may be obtained from the Director, Northern Administration and Lands Branch, Department of Northern Affairs and National Resources, Ottawa.

† Appointed Dec. 6, 1958 to complete term of John Parker who resigned as member upon his appointment as Judge of the Territorial Court of the Yukon Territory.

Section 3.—Municipal Government*

Municipal government in Canada is placed under the control of the provincial legislatures by the British North America Act, 1867. Thus the powers of municipalities are those delegated to them by statutes passed by their respective provincial governments, some of which apply to all municipalities within the province, some to a certain type or group, and many to one municipality only. Municipal powers are further defined by regulations issued (under the provisions of the Acts) by the provincial government departments charged with their supervision and control. In the Yukon and Northwest Territories, some municipal powers have been assigned to certain localities by the Federal Government and the territorial councils.

While powers and responsibilities delegated to municipalities vary from province to province and even within a province, they are largely those of raising money locally, of borrowing, and of spending to provide local services. All provinces give financial assistance in some form, usually as subsidies or grants-in-aid of certain services administered by the municipalities, and often as loans on or guarantees of loans for capital projects. Retention or assumption of what are often regarded as municipal responsibilities is sometimes considered an indirect form of aid, as is the extension of taxing privileges into what may be commonly regarded as a provincial revenue field.

The major revenue source available to municipalities is property taxation. It is supplemented in varying degrees by taxation of personal property, business, persons (poll taxes), and tenants. In two provinces municipalities may levy an amusement tax, in two they may impose sales taxes on a limited basis, and in Quebec some cities have been granted the right to levy a general sales tax. Miscellaneous general revenue is derived from licences, permits, rents, concessions, franchises and fines. Most urban municipalities of any size operate utilities and enterprises for the provision of water and, in many instances, electricity, gas, transportation, telephone and other services. These sometimes provide surplus funds that may become available to help provide other municipal services. On the other hand, expenditures of municipalities often include provision for the deficits of utilities and enterprises.

In differing degree and with varying provincial assistance, municipalities are responsible for the following services: protection to persons and property through police and fire forces, courts and local gaols, and inspection services; roads and streets; sanitation; certain health and welfare services; and some recreation and other community services. Except in Quebec and Newfoundland and in a few minor localities where school authorities must raise funds for education that are not provided by the province concerned, municipalities are responsible for levying and collecting local education taxes on property on behalf of the local schools, and often for borrowing capital funds for school construction. This stems from the traditional concept that education is a local responsibility, though it is now largely financed and administered by the provincial governments. Local administrative responsibility for education lies with boards of trustees separate from the councils that govern municipalities (except in the "counties" recently established in Alberta).

In some localities, certain local services are administered by special district authorities encompassing a number of municipalities or parts of municipalities. These district authorities provide services, such as greater water and sewerage districts, drainage and irrigation districts, and health units, which elsewhere may be provided by the muni-

* Prepared in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

cipality directly or through a board or utility. They are, in effect, co-operative efforts or a modified form of metropolitan government. Metropolitan government is a live issue in many larger centres but so far has been established only in the Toronto area.

The following paragraphs describe municipal organization in each province as at Jan. 1, 1958. In Table 24, which gives the number of each type of municipality in each province, all fully incorporated cities, towns and villages are regarded as urban municipalities. It is difficult to apply arbitrary definitions, such as that which classifies as urban centres all places having a population of 1,000 or more persons.

Newfoundland.—The Province of Newfoundland has two cities—St. John's and Corner Brook. A number of the province's many settlements have been organized into 31 towns, four rural districts, three local improvement districts and 27 local government communities. The towns, rural districts and local improvement districts operate under the Local Government Act; towns and rural districts have elected councils and local improvement districts have appointed trustees. Local government communities established under the Community Councils Act in the smaller settlements have limited powers and functions. There are no rural municipalities in the usual sense. Thus, between 40 p.c. and 50 p.c. of the population of the province is now organized in some form of local authority but only about one-fifth of 1 p.c. of the total area is so governed. Municipalities are supervised by the Department of Municipal Affairs and Supply.

Prince Edward Island.—In this island province, one city and seven towns have been incorporated under special Acts and 16 villages have been established under the Village Services Act. There is no municipal organization for the remainder of the province though it is divided into school sections.

Nova Scotia.—Municipal organization in Nova Scotia covers the whole of the province. The two cities, Halifax and Sydney, operate under special charters and special legislation. Forty towns operate under the Town Incorporation Act but there are no municipalities incorporated as villages. Cities and towns are independent of counties. The rural area is divided into 18 counties which, in themselves, do not represent units of local government. However 12 of these counties each comprise one municipality and the other six each comprise two municipalities, making a total of 24 rural municipalities. Supervision of municipalities is exercised through the Department of Municipal Affairs.

New Brunswick.—This province is divided into 15 counties which are incorporated municipalities and have direct powers of local self-government as rural municipalities, though certain of their powers often apply in both rural and urban municipalities. The six cities have special charters, and the 20 towns operate under the Towns Incorporation Act. There is one village and 56 local improvement district areas within the counties but outside the cities, towns and villages; these have been incorporated for the provision of limited municipal services. The Department of Municipal Affairs exercises supervision.

Quebec.—Municipal divisions in Quebec embrace the more thickly settled areas comprising about one-third of the province, the remainder being governed by the province as "territories". The organized area is divided into 75 county municipalities, which are divided again into local municipalities and designated as village, township or parish municipalities or simply as municipalities. The counties as such have no direct powers of taxation. Funds to finance the services falling within their jurisdiction are provided by the municipalities forming part thereof. Parts of some counties are not yet organized into incorporated units of local government, being in outlying areas with little or no

population. There are 336 villages and 1,132 townships and parishes. A small number of these are independent of the counties in which they are located. The Municipal Code governs local municipalities, and the 42 cities and 152 towns have special Acts. The supervision and assistance of municipalities is through the Department of Municipal Affairs and the Quebec Municipal Commission. Municipal statistics are gathered by the Quebec Bureau of Statistics.

Ontario.—Slightly more than one-tenth of the area of Ontario is municipally organized and the remainder is governed entirely by the provincial government. The older section of the province is divided into 43 counties, five of which are united with others for administrative purposes. Each county, although it is an incorporated municipality, is comprised of the towns, villages and townships situated within its borders, and these provide its revenue. The Municipality of Metropolitan Toronto encompasses one city, four towns, three villages and five townships. There are 29 cities, 157 towns, 154 villages, 573 townships and 24 improvement districts in the province. Some of each are located in the northern districts which are not organized into counties. Supervisory control of municipalities is exercised by the Department of Municipal Affairs and the Ontario Municipal Board under the Municipal Act and other Acts governing aspects of municipal government.

Manitoba.—Manitoba has six cities, which derive their powers from special Acts and do not come under the supervision of the Department of Municipal Affairs. The Department supervises the 35 towns, 37 villages and 112 rural municipalities under the Municipal Act. There are local government districts in settled areas not within rural municipalities.

Saskatchewan.—All municipalities in Saskatchewan derive their powers from general Acts that are designated with the name of the type of municipality. There are 10 cities, 102 towns, 373 villages and 296 rural municipalities. The area so organized consists of most of the southern two-fifths of the province—the remainder of this portion is administered for local purposes by the province in unincorporated local improvement districts. The northern three-fifths is sparsely populated and without local government though some municipal services are provided by the province through operation of the Northern Administrative Area. Supervision of municipalities is in the hands of the Department of Municipal Affairs.

Alberta.—The province has an Act applying to each type of municipality, and under these Acts the Department of Municipal Affairs supervises the 9 cities, 86 towns, 152 villages, 38 municipal districts and 10 counties. The latter administer schools as well as municipal services.

British Columbia.—Less than one-half of 1 p.c. of the area of British Columbia is organized into municipalities. Additional small areas have sufficient population to require administration of local activities by the provincial government. There are 35 cities, 2 towns, 55 villages, and 30 districts; the latter are chiefly rural municipalities except for those adjacent to the principal cities of Victoria and Vancouver, which are largely urban in character. It should be emphasized, however, that the application of the name "city" is somewhat different from the commonly accepted meaning in that several of them have populations of fewer than 1,000 and perhaps one-half or more would not normally be incorporated as cities in another province. Legislation of 1957 provided for the incorporation of towns, and two villages attained this status at the beginning of 1958. Municipalities are supervised by the Department of Municipal Affairs.

Yukon and Northwest Territories.—There are two cities and one town in the Yukon Territory and two local administrative districts in the Northwest Territories, all of which provide some municipal services to their local areas. These are not shown in Table 24.

¹ Municipalities grouped according to their official nomenclature, which is roughly indicative of size and nature (see footnote 6). ² Municipalities grouped under the classification devised by the Dominion-Provincial Conferences on Municipal Statistics, designed to bring municipalities into comparable groups for statistical presentation.

³ Excludes 57 local improvement districts. ⁴ Designated by the province as towns (31), rural districts (4), and local improvement districts (3); all operate under the same Act. ⁵ Classified by province as "community councils".

⁶ Rural municipalities are designated by different names in the different provinces. ⁷ Includes 24 improvement districts. ⁸ Includes 3 units of self-government known as "suburban municipalities"; excludes local government districts. ⁹ Excludes 12 improvement districts. ¹⁰ Includes 10 county municipalities; excludes 50 improvement districts and two special areas.

¹¹ Includes Municipality of Metropolitan Toronto. ¹² Includes municipalities shown wholly or partly in metropolitan areas by the 1956 Census, except for the Municipality of Metropolitan Toronto (see footnote 11). ¹³ Classed by provincial authorities as sub-urban and semi-urban.

Section 4.—Federal and Provincial Royal Commissions

Federal Royal Commissions.*—Royal Commissions established from Oct. 15, 1957 to Jan. 31, 1958 are given in the Appendix, p. 1293 of the 1957-58 Year Book, in continuation of those previously reported in the Year Books beginning with the 1940 edition at pp. 1108-1110.

* Commissions constituted under Part I of the Federal Inquiries Act.

Provincial Royal Commissions.—The following list is in continuation of those appearing in previous Year Books beginning with the 1948-49 edition.

<i>Province and Nature of Commission</i>	<i>Commissioner or Chairman</i>	<i>Date</i>
NEWFOUNDLAND		
Commission of Enquiry into the situation with respect to unemployment throughout the Province.	Lester Coombs.....	June 17, 1958
Commission of Enquiry into the matter of the award of Pensions and/or Gratuities to Civil Servants and other employees of the Government of Newfoundland.	G. W. D. Allen.....	June 17, 1958
MANITOBA		
Commission to inquire into the matter of Education.	Ronald Oliver MacFarlane.....	May 15, 1957
Commission to inquire into every aspect of the Workmen's Compensation Act.	Hon. William F. A. Turgeon.....	Sept. 11, 1957
Commission to inquire into the distribution of natural gas in Greater Winnipeg.	John J. Deutsch.....	Mar. 4, 1958
ALBERTA		
Commission to inquire into feasibility of introducing uniform scale of salaries for teachers.	G. M. Blackstock.....	July 9, 1957
Commission to inquire into present and potential development of that part of Alberta lying generally to the north of the 55th Parallel of North Latitude.	J. G. MacGregor.....	July 19, 1957
Commission to make comprehensive survey of various phases of elementary and secondary school system of Province of Alberta with particular attention to programs of study and pupil achievement.	Hon. D. Cameron.....	Dec. 31, 1957
BRITISH COLUMBIA		
Board of Reference to receive and examine representations for the alteration of the Civil Service Act.	Hon. Gordon McGregor Sloan (Board of Reference)*.....	July 9, 1957
Forest Management Licences.....	Hon. Gordon McGregor Sloan.....	Nov. 1, 1957
Forestry Resources—Appointment of Advisor to the Government in relation to the Forest Resources of British Columbia.	Hon. Gordon McGregor Sloan.....	Dec. 19, 1957
Provincial educational system to university level.	Sperrin N. F. Chant.....	Jan. 17, 1958
Road User Charges.....	Dr. Henry Forbes Angus.....	April 14, 1958
Inquiry into the collapse of a certain portion of the Second Narrows Bridge.	Hon. Chief Justice Sherwood Lett..	June 18, 1958
Industrial Inquiry Commission to inquire into the circumstances and merits of disputes between the International Woodworkers of America and Companies represented by Forest Industrial Relations.	Hon. Gordon McGregor Sloan.....	Aug. 2, 1958
Industrial Inquiry Commission to inquire into the circumstances and merits of disputes between various employers, employers' associations, employees and unions engaged in the plumbing and pipefitting industry and the electrical industry.	H. Carl Goldenberg.....	Aug. 13, 1958

* Resignation accepted May 12, 1958; Alfred William Carrothers appointed May 12, 1958.

THE GOVERNMENT

DEPARTMENTS

Note: Lines of responsibility are often inconclusive, since certain semi-independent agencies, though each responsible to a Minister of the Crown, are administered as departmental branches.

1. Not an Agent of the Crown but reports to Parliament through the Prime Minister.

2. Responsible, through the Secretary to the Cabinet, to the Prime Minister for the co-ordination of civil emergency planning, including civil defence. On September 1, 1959, the Departments of National Defence, Health and Welfare and Justice became responsible for specific civil defence functions; the Emergency Measures Organization for the residue.

3. Jointly responsible to the Minister of Fisheries and the Minister of Trade and Commerce.

PART III.—ADMINISTRATIVE FUNCTIONS OF THE FEDERAL GOVERNMENT*

A special article presenting information on the administration and control of the financial affairs of the Federal Government appears in the 1956 Year Book at pp. 101-107.

Section 1.—Departments, Boards, Commissions, etc.

The following paragraphs indicate the functions of the various departments of government and the special boards and commissions in connection with the work of government.

Though it is not possible, owing to the limitations of space, to enumerate in this Section the details of each service or the divisions or sections of all the departments, the main branches are given along with those services that differ in some quality from the larger class of subjects handled by a department. The work of many of these departments and boards is given in detail in later Chapters of this volume. The Index will be useful in locating required information.

Department of Agriculture.—This Department was established in 1867 (30 Vict., c. 53) and undertakes work on all phases of agriculture. Research and experimentation are carried out by the Research Branch; the maintenance of standards and protection of products by the Production and Marketing Branch; reclamation and development by the Prairie Farm Rehabilitation Administration and the Maritime Marshland Rehabilitation Administration; security and price stability policies are administered under the Prairie Farm Assistance Administration and Agricultural Stabilization Board.

Air Transport Board.—The Air Transport Board was established in 1944 by amendment of the Aeronautics Act. The Board is responsible for the economic regulation of commercial air services in Canada. The regulatory function relates to Canadian air services within Canada and abroad, and to foreign air services operating into Canada. It involves the licensing of all such services and the subsequent regulation of the licensees in respect of their economic operation and the provision of service to the public. The Board reports to Parliament through the Minister of Transport.

Auditor General's Office.—This Office originated in 1878 (41 Vict., c. 7) and currently functions under the Financial Administration Act (R.S.C. 1952, c. 116). The Auditor General is responsible for examining accounts relating to the Consolidated Revenue Fund and to public property, and for reporting annually to the House of Commons the results of his examinations. He also audits the accounts of various Crown corporations and other instrumentalities.

Board of Grain Commissioners.—Constituted in 1912 under the Canada Grain Act, 1912—now Canada Grain Act, 1930 (R.S.C. 1952, c. 25)—the Board of Grain Commissioners provides general supervision over grain handling in Canada, by licensing elevator operators, inspecting and weighing grain en route to and shipped from terminal elevators, and other services. The Board, comprising a Chief Commissioner and two Commissioners, has authority to inquire into any matter relating to the grading and weighing of grain, deductions for dockage or shrinkage, deterioration of any grain during storage or treatment, unfair or discriminatory operation of a grain elevator, etc. The Board publishes its regulations in the *Canada Gazette* and reports to Parliament through the Minister of Trade and Commerce.

Board of Transport Commissioners.—The powers of this Board, which was organized as the Board of Railway Commissioners in 1904, have been extended from time to time until today it has regulatory and judicial functions dealing with almost all aspects of railway activity including location, construction and operation of lines, rates and charges. It is also entrusted with the regulation of other transportation and communication agencies, including express companies, telegraph companies, telephone companies other than those provincially or municipally controlled, international bridges and tunnels, inland shipping and pipelines. The Board reports to Parliament through the Minister of Transport.

Canadian Government Specifications Board.—This is a co-operative body in which Government and industry participate on a voluntary basis. It was formed June 13, 1934, as the Canadian Government Purchasing Standards Committee, under the auspices of the National Research Council. It undertakes the preparation of specifications in commodity fields and for materials, processes and equipment in which government departments and agencies may be interested and arranges for testing and research work.

* As at Sept. 1, 1953; changes taking place between that date and the date of going to press are carried in an Appendix to this volume and in the accompanying chart showing the organization of the Government of Canada.

Chief Electoral Office.—This Office was established in 1920 under the provisions of the Dominion Elections Act, now the Canada Elections Act (R.S.C. 1952, c. 23), and amendments thereto, and is responsible for the conduct of all federal elections as well as the elections of members of the Northwest Territories Council. In addition it conducts any vote taken under the Canada Temperance Act. The Chief Electoral Officer reports to Parliament through the Secretary of State.

Department of Citizenship and Immigration.—This Department was constituted in December 1949 (R.S.C. 1952, c. 67) and came into existence on Jan. 18, 1950, under the Minister of Citizenship and Immigration. Most departmental work is carried on through four branches. The Canadian Citizenship Branch assists governmental and non-governmental agencies engaged or interested in facilitating the adjustment and integration of newcomers and in making Canadians conscious of their privileges and responsibilities as citizens. The Canadian Citizenship Registration Branch administers the Canadian Citizenship Act and is the custodian of all records under that Act and all Naturalization Acts previously in force. The Immigration Branch administers the Immigration Act and Regulations and is responsible for the selection, examination and movement of immigrants, the exclusion or deportation of undesirables and the settlement or establishment of immigrants in Canada. The activities of the Indian Affairs Branch include management of all Indian affairs. Its organization consists of a headquarters office at Ottawa, a regional supervisory staff, and 89 local agencies in the field.

The Minister of Citizenship and Immigration is responsible to Parliament for the National Film Board, the National Library, the Public Archives, and for the National Gallery of Canada.

Civil Service Commission.—The Civil Service Commission of Canada dates from the Civil Service Act of 1908. Under this Act the Commission was given the responsibility of applying, wherever possible, the principle of appointment by merit in filling permanent positions within departmental headquarters positions at Ottawa, termed the 'inside service'.

The Civil Service Act, 1918 extended the competitive system of appointments to cover the outside as well as the inside service and temporary as well as permanent appointments. It made the Commission responsible for establishing a system of organization and classification that would secure uniformity in the staffing of the various departments and in the salaries paid for work of equal levels of difficulty and responsibility.

The jurisdiction of the Commission now extends to all departments of the Government and to a large number of boards and commissions, exclusive of Crown corporations.

The Civil Service Commission, which is responsible not to the executive government but only to Parliament, consists of three members, one of whom serves as Chairman. Each member of the Commission is appointed by the Governor in Council for a term of ten years and each has the rank and standing of a Deputy Minister. The Commission has a staff of approximately 660 persons located in the headquarters office at Ottawa and in district offices at St. John's, Nfld., Halifax, N.S., Moncton, N.B., Montreal, Que., Toronto, Ont., Winnipeg, Man., Regina, Sask., Edmonton, Alta., and Vancouver, B.C.

Department of Defence Production.—This Department was established on Apr. 1, 1951, under the provisions of the Defence Production Act (R.S.C. 1952, c. 62, as amended). Under this Act the Minister is given, with certain exceptions, authority to buy defence supplies and construct defence projects required by the Department of National Defence. The Minister may, if authorized by the Governor General in Council, undertake for an associated government anything he may undertake for the Canadian Government. In addition, all powers, duties and functions that theretofore were vested in the Minister of Trade and Commerce under any contract, agreement, lease or other writing entered into pursuant to the Department of Munitions and Supply Act, 1939, or the Defence Supplies Act, 1950, are vested in the Minister of Defence Production.

Broadly, the Department's functions are to procure military goods, to construct defence installations and to organize industry for defence as required on behalf of the Department of National Defence, other government departments, and associated governments; to promote the expansion of defence production facilities and the development of defence-supporting industries particularly of strategic resources important for the defence of Canada and its allies; and to ensure adequate supplies of essential materials and services for defence requirements. The main procurement units of the Department are six production branches—Aircraft, Ammunition, Electronics, Gun, Machine Tool and Shipbuilding—and a General Purchasing Branch. Major offices for foreign procurement are located at London, England, and Washington, U.S.A.; the General Purchasing Branch has 14 district purchasing offices located throughout Canada for local or urgent procurement. In addition, there are various service branches which include Administration, Comptroller's, Economics and Statistics, Financial Adviser's, Industrial Security, Legal, and Secretary's.

The following Crown companies report to Parliament through the Minister of Defence Production: Canadian Arsenals Limited, Canadian Commercial Corporation, Crown Assets Disposal Corporation, Defence Construction (1951) Limited, and Polymer Corporation Limited.

Dominion Bureau of Statistics.—The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (3-9 Geo. V, c. 43). In 1948 this statute, which had been consolidated as the Statistics Act (R.S.C. 1927, c. 190), was repealed and replaced by the Statistics Act (R.S.C. 1952, c. 257); it was amended by 1-2 Eliz. II, c. 18, assented to Mar. 31, 1953.

The function of the Dominion Bureau of Statistics is to compile, analyse and publish statistical information relative to the commercial, industrial, financial, social and general condition of the people and to conduct a census of population and agriculture of Canada as required under the Act.

The Bureau is the principal publication agency of the Federal Government; the subjects of the reports cover all aspects of the national economy. The administrative head of the Bureau is the Dominion Statistician who reports to Parliament through the Minister of Trade and Commerce.

Department of External Affairs.—This Department was established in 1909 by "An Act to create a Department of External Affairs" (R.S.C. 1952, c. 68). Its main function is the protection and advancement of Canadian interests abroad. The head of the Department of External Affairs is the Secretary of State for External Affairs. The senior permanent officer of the Department is the Under-Secretary (Deputy Minister) who is the chief adviser to the Secretary of State for External Affairs. He is assisted by a Deputy Under-Secretary and by four Assistant Under-Secretaries, one of whom is Legal Adviser, and is advised by officers in charge of the various divisions, each responsible for a part of the work of the Department. The divisional heads are assisted by Foreign Service Officers, Administrative Officers and by an administrative staff. Officers serving abroad are formally designated as Ambassadors, Ministers, Counsellors, First, Second, Third Secretaries and Attachés at diplomatic posts and as Consuls General, Consuls and Vice-Consuls at consular posts. Sixty-four diplomatic and consular posts are maintained abroad.

The work of the Department at Ottawa is performed by 19 divisions, which can be grouped according to their functions into three categories—political, functional and administrative. There are five political divisions—American, Commonwealth, European, Middle Eastern and Far Eastern; ten functional divisions—Communications, Consular, Defence Liaison (1) and (2), Economic, Information, Legal, Historical Research and Reports, Protocol and United Nations; and four administrative divisions—Establishments and Organization, Finance, Personnel, and Supplies and Properties. There are also three smaller sections—Inspection Service, Political Co-ordination Section and the Press Office.

Department of Finance.—This Department, created on June 22, 1869, by an Act respecting the Department of Finance (32-33 Vict., c. 4), is under the authority of the Minister of Finance. The Department is responsible for the financial administration of Canada including raising the money required for the various governmental activities by way of taxation or borrowing. The Comptroller of the Treasury, an officer of the Department, is responsible for all Government disbursements.

The work of the Department is organized in six principal Divisions: Administration, Financial Administration and Accounting Policy, Superannuation, Treasury Board, Taxation, and International Affairs. The Royal Canadian Mint is a branch of the Department and the Inspector General of Banks is an officer of the Department.

The Tariff Board and the Canadian Farm Loan Board are responsible to Parliament through the Minister of Finance.

Department of Fisheries.—The Department of Fisheries was first organized under a Minister of Fisheries in 1930. Prior to that date the federal fisheries services were maintained by the former Department of Marine and Fisheries, established in 1868. The provinces, under various arrangements, have certain administrative responsibilities in the fisheries but the legislative authority for the regulations of coastal and freshwater fisheries is with the federal Department of Fisheries.

The work of the Department includes: conservation and development of the fisheries through the enforcement of fishing regulations, the operation of fish culture establishments, management and improvement of spawning streams and control of predators; inspection of fish products for quality control and the encouragement of industrial development; promotion of the greatest utilization of fishery products and a proper public understanding of the resource and the industry. The Department administers the Fishermen's Indemnity Plan to assist fishermen in the event of loss or serious damage to their fishing vessels or lobster traps.

Agencies connected with the Department are the Fisheries Prices Support Board and the Fisheries Research Board of Canada. The Department is represented on these International Commissions: Pacific Salmon Fisheries, Pacific Halibut, the Northwest Atlantic Fisheries, North Pacific Fisheries, Whaling, and Great Lakes Fishery, and participates in an international agreement controlling the take of Pribilof seals.

Fisheries Research Board.—The Fisheries Research Board operates under the Fisheries Research Board Act of 1937 (amended in 1947 and 1952-53). It has been active as a fisheries research body since 1898, first as Board of Management of the Canadian Marine Biological Station and later (1912) as the Biological Board of Canada.

The Board operates under the Minister of Fisheries and membership consists of a full-time chairman and up to 18 members appointed by the Minister from among leading Canadian scientists and businessmen with a knowledge of fishery problems, and senior officers of the Department of Fisheries.

The Board operates five biological stations across Canada, three technological stations with two application units and two oceanographic groups. It serves as the scientific arm of the Department of Fisheries and its principal objective is to increase the scope and value of Canadian fisheries through scientific research.

Department of Insurance.—The Minister of Finance is responsible for the Department of Insurance which originated in 1875 as a branch of the Department of Finance but was constituted a separate Department in 1910. It is authorized and governed by the Department of Insurance Act (R.S.C. 1952, c. 70). Under the Superintendent of Insurance, the Department administers the statutes of Canada applicable to: insurance, trust and loan companies incorporated by the Parliament of Canada; provincially incorporated insurance companies registered with the Department; British and foreign insurance companies operating in Canada; small loans companies and money-lenders; co-operative credit societies registered under the Co-operative Credit Associations Act; and Civil Service insurance.

Under the relevant provincial statutes the Department examines provincial trust companies in the Provinces of Manitoba and New Brunswick and loan and trust companies in the Province of Nova Scotia.

International Joint Commission.—This Commission was established under a Great Britain-United States treaty, Jan. 11, 1909, ratified by Canada in 1911. The Commission, composed of six members (three appointed by the President of the United States and three by the Government of Canada) is governed by five specific Articles of the Boundary Waters Treaty of 1909. The Commission's approval is required for any use, obstruction or diversion of boundary waters affecting the natural level or flow of boundary waters in the other country; and for any works in waters flowing from boundary waters or below the boundary in rivers flowing across the boundary which raise the natural level of waters on the other side of the boundary.

Problems arising along the common frontier are also referred to the Commission by either country for examination and report, such report to contain appropriate conclusions and recommendations. In addition, questions or matters of difference between the two countries may be referred to the Commission for decision, provided both countries consent.

The Commission reports to the Secretary of State for External Affairs of Canada and the Secretary of State of the United States.

Department of Justice.—This Department, established by 31 Vict., c. 39 (1868), now operates under authority of the Department of Justice Act (R.S.C. 1952, c. 71). It provides legal services to the Government and various government departments including preparing and settling government legislation, settling instruments issued under the Great Seal, regulating and conducting litigation for or against the Crown, superintending the acquisition of property and prosecutions under federal legislation other than the Criminal Code, administers federal statutes dealing with legal matters and provides administrative services for the Supreme Court of Canada and the Exchequer Court. The Department also superintends the penitentiaries and administers the prison system of Canada.

Department of Labour.—The Department of Labour was established in 1900 by Act of Parliament (63-64 Vict., c. 24) and now operates under authority of the Department of Labour Act (R.S.C. 1952, c. 72). The Department administers, under the Minister of Labour, legislation dealing with: industrial relations, investigation of disputes, etc.; fair employment practices; the regulation of fair wages and hours of labour; reinstatement in civil employment; female employees equal pay; government annuities; government employee compensation; merchant seamen compensation; vocational training; annual vacations with pay. It promotes joint consultation in industry through labour-management committees; provides co-ordination of services for rehabilitation of disabled civilians; organizes manpower utilization programs, e.g., farm labour; and operates a Women's Bureau. The Department publishes the *Labour Gazette* and other publications, as well as general information on labour-management, employment, manpower and related subjects.

The Canada Labour Relations Board acts on behalf of, and the Vocational Training Advisory Council acts in an advisory capacity to the Minister of Labour, and the Merchant Seamen Compensation Board reports to the Minister of Labour. The Department is the official liaison agency between the Canadian Government and the International Labour Organization.

The Unemployment Insurance Commission, which also maintains the National Employment Service, reports to the Minister of Labour.

Department of Mines and Technical Surveys.—This Department was created by an Act of Parliament (13 Geo. VI, c. 17) which received Royal Assent on Dec. 10, 1949. Its establishment resulted from the reorganization of certain former departments. A primary function of the Department is to provide technological assistance in the development of Canada's mineral resources through investigations and research in the fields of geology, mineral dressing and metallurgy. The Department establishes the framework of surveys throughout the country that provides

control for all surveying and mapping in Canada. It produces the base maps used in the development of Canada's natural resources, conducts all the charting of Canada's coastal and inland waters, and issues the official Canadian sea and air navigation charts. The Department is under the Minister of Mines and Technical Surveys and is divided into five branches: the Surveys and Mapping Branch, the Geological Survey of Canada, the Mines Branch, the Dominion Observatories, and the Geographical Branch. The Mineral Resources Division, a unit of head office, gives its whole attention to matters concerned with the economics of mineral resources development.

The Department administers the Explosives Act which regulates the manufacture, testing, sale, storage and importation of explosives, and the Emergency Gold Mining Assistance Act which provides cost-aid to the Canadian gold mining industry.

Boards and Commissions are: Canadian Board on Geographical Names; Board of Examiners for Dominion Land Surveyors; International Boundary Commission and Interprovincial Boundary Commissions.

Department of National Defence.—The Department of National Defence was established on Jan. 1, 1923, by the Department of National Defence Act, 1922, and was an amalgamation of the Department of Militia and Defence, the Naval Service and the Air Board. The Department and the Canadian Forces (the Royal Canadian Navy, the Canadian Army and the Royal Canadian Air Force) now operate under the National Defence Act, 1950 (R.S.C. 1952, c. 184).

In 1940 additional Ministers for Naval and Air Services were appointed and the Department was organized under a Minister of National Defence and two additional Ministers so that there was a Minister and staff for each of the Armed Services. Upon demobilization of the wartime Forces the appointment of Ministers of National Defence for Naval Services and Air Services ceased, and the Armed Forces were, in 1946, again administered by the Minister of National Defence without additional Ministers. Under the National Defence Act the Canadian Forces are being administered solely by the Minister of National Defence, the appointment of an Associate Minister of National Defence remaining vacant.

The Defence Research Board, created in 1947 to carry out research relating to national defence and to advise the Minister on all relevant matters of a scientific or technical nature, now functions under the National Defence Act. The Chairman of the Board has a status equivalent to that of a Chief of Staff of one of the Canadian Forces.

Department of National Health and Welfare.—This Department was established in October 1944 under the authority of the Department of National Health and Welfare Act (R.S.C. 1952, c. 74). The Department, headed by the Minister of National Health and Welfare, is composed of three branches—Health, Welfare, and Administration—and is administered through two Deputy Ministers.

The Health Branch is divided into three directorates—Health Services, Food and Drugs, and Indian Health Services. It has 14 Divisions active in certain public health fields divided into five main groups—Medical Advisory, Research Development and International Health, Environmental Health, Health Insurance, and Health Grants Administration—each of which is headed by a Principal Medical Officer.

The Welfare Branch is made up of the Divisions of Family Allowances and Old Age Security, Old Age Assistance, and Blind and Disabled Persons Allowances. The Department is also responsible for federal civil defence planning, with the Civil Defence Co-ordinator reporting to both Deputy Ministers. The Administration Branch includes divisions where activities cover both health and welfare fields, such as research, information, legal and library services, as well as administrative, personnel and purchasing and supply services.

National Film Board.—The National Film Board was established in 1939 and the National Film Act (R.S.C. 1952, c. 185) provides for a Board of Governors of nine members—a Government Film Commissioner, appointed by the Governor in Council, who is Chairman of the Board, three members from the public service of Canada and five members from outside the public service. The Board reports to Parliament through a designated Minister of the Crown (at present the Minister of Citizenship and Immigration). The Board is responsible for advising the Governor in Council on film activities and is authorized to produce and distribute films in the national interest and in particular films "designed to interpret Canada to Canadians and to other nations".

National Library.—As a result of the National Library Act proclaimed Jan. 1, 1953, the National Library superseded the Canadian Bibliographic Centre. It continues to publish *Canadiana*, a monthly list of new publications relating to Canada, with a yearly cumulation. The Library also publishes other bibliographies. Its Reference Division maintains the National Union Catalogue which embodies the catalogues of the major libraries in the ten provinces and is a key to the book collections in the whole country. The National Librarian reports to the Minister of Citizenship and Immigration.

Department of National Revenue.—From Confederation until May 1918, customs and inland revenue Acts were administered by separate departments; after that date they were amalgamated under one Minister as the Department of Customs and Inland Revenue. In 1921 the name was changed to the Department of Customs and Excise. In April 1924 collection of income taxes was placed under the Minister of National Revenue and, under the Department of National Revenue Act, 1927, the Department became known as the Department of National Revenue.

The Customs and Excise Division of the Department is responsible for the assessment and collection of customs and excise duties as well as sales and excise taxes, by ports and outposts. The Taxation Division is responsible for the assessment and collection of income taxes and succession duties by 29 district offices throughout Canada.

The Minister of National Revenue is responsible to Parliament for the Income Tax Appeal Board and also reports to Parliament for the Canadian Broadcasting Corporation.

Department of Northern Affairs and National Resources.—The Department of Northern Affairs and National Resources was established in December 1953, superseding the Department of Resources and Development. In addition to Administration Services, which performs auxiliary functions, the Department is divided into seven branches: the National Parks Branch administers the National Parks and National Historic Parks of Canada, National Historic Sites, and wildlife matters coming within the jurisdiction of the Federal Government; the Water Resources Branch is responsible for the investigation of water power resources, for the administration of federal assistance to the provinces under the Canada Water Conservation Assistance Act and for federal interests in certain joint federal-provincial construction projects; the Northern Administration and Lands Branch is responsible for the administration of various federal Acts, Territorial ordinances and regulations pertaining to the government of the Northwest Territories, for the conduct of certain business arising from the general administration of the Yukon Territory, for the administration of natural resources in those Territories, and for Eskimo affairs, as well as for certain lands and mineral rights in the provinces vested in the Crown in the right of Canada; the Forestry Branch conducts investigations in the protection and utilization of the forest resources of Canada, maintains forest experiment stations and forest products laboratories and administers federal assistance to the provinces under the Canada Forestry Act; the Natural History Branch and Human History Branch of the National Museum of Canada are responsible for research, publication of scientific studies, and public exhibitions in their respective fields of natural history and human history; and the Canadian Government Travel Bureau promotes the tourist industry by encouraging tourist travel in Canada.

The Minister of Northern Affairs and National Resources is also responsible to Parliament for the Eastern Rockies Forest Conservation Board, the Northern Canada Power Commission, and the National Battlefields Commission. The Historic Sites and Monuments Board of Canada, an honorary body of recognized historians representing the various provinces, and the Advisory Board on Wildlife Protection act in an advisory capacity to the Minister in those fields. The Deputy Minister is Commissioner of the Northwest Territories.

Post Office Department.—Administration and operation of the Canada Post Office, by virtue of the Post Office Act (R.S.C. 1952, c. 212) and under the Postmaster General, includes all phases of postal activity, personnel, mail handling, postal accommodation, transportation of mails by land, water, rail and air and the direction and control of financial services including the operation of money order and savings bank business.

Public Archives.—The Public Archives was founded in 1872 and is administered under the Public Archives Act (R.S.C. 1952, c. 222) by the Dominion Archivist who has the rank of a Deputy Minister and reports to Parliament through the Minister of Citizenship and Immigration. Its purpose is to assemble and make available to the public a comprehensive collection of historical source material relating to the history of Canada. Major emphasis is placed on official records of the Government and the personal papers of political leaders and other prominent figures. These are supplemented by copies of many records in the British and French archives that relate to Canada, a fine map collection, a historical library, and many prints, paintings and photographs.

Department of Public Printing and Stationery.—This Department was established in 1886 and is in the charge of the Queen's Printer and Controller of Stationery.

The Department is responsible for supplying all requirements of printing and stationery to Parliament and Departments of the Canadian Government; the cataloguing, distribution and sale of government publications; the publication of the *Canada Gazette*, and all departmental reports, papers, etc., required to be published by authority of the Governor General in Council (R.S.C. 1952, c. 226) and the publication of the Statutes of Canada (R.S.C. 1952, c. 230).

The Department of Public Printing and Stationery is under the jurisdiction of the Secretary of State.

Department of Public Works.—This Department was constituted in 1867 and operates under the legislative authority of the Public Works Act and other Acts of Parliament. It is responsible for the management and direction of the public works of Canada and, except as specifically provided in other Acts, attends to the construction and maintenance of public buildings, wharves, piers, roads and bridges and the undertaking of dredging and navigable waters protection work. The Department maintains District Offices at key points across the country. The main operating Branches of the Department with headquarters in Ottawa are Harbours and Rivers Engineering, Building Construction, Development Engineering, Property and Building Management, and Purchasing and Stores. In addition, the Fire Prevention Branch, organized in 1919 and now a part of the Department of Public Works, maintains fire-loss records, makes inspections, reports on fire protection legislation and protection methods and endeavours to extend and co-ordinate fire prevention work in Canada. Federal interests in the Trans-Canada Highway are also handled by the Department.

The Minister of Public Works is responsible to Parliament for the Central Mortgage and Housing Corporation.

Department of the Secretary of State.—The Secretary of State and Registrar General of Canada is the official medium of communication with the Throne through the Governor General, and is the custodian of the Great Seal of Canada and of the Privy Seal of the Governor General. He is responsible for the preparation and tabling of returns in Parliament. He administers legislation relating to patents of invention, trade marks, industrial designs, timber marking, copyright, companies, boards of trade, the registration of trade unions, public officers, public documents and governmental and parliamentary translations. He is also the Custodian of Enemy Property.

The Secretary of State has certain responsibilities with respect to civilian decorations, precedence and ceremonial. The Committee on the use of Parliament Hill and the National War Memorial falls within his purview. He is the Minister of the Department of Public Printing and Stationery and the spokesman in Cabinet and Parliament for the Civil Service Commission and the Chief Electoral Officer.

Department of Trade and Commerce.—The Department of Trade and Commerce was established by Act of Parliament on June 23, 1887, but did not function until Dec. 5, 1892, when an Order in Council to this effect was passed. Before the formation of the Department, assistance in the development of Canada's external trade was provided by eight Canadian Commercial Agents—five in the West Indies, two in Great Britain and one in France—who served on a part-time basis and were responsible to the Minister of Finance. In 1895 a Canadian Commercial Agent was appointed at Sydney, Australia, as the first full-time salaried Agent of the Department.

The framework of the present Trade Commissioner Service emerged during the next decade or so, the Commercial Agents gradually giving place to career Trade Commissioners. There are now 126 Trade Commissioners serving at Headquarters and abroad in 58 posts (including Assistant Trade Commissioners and agricultural, fisheries and timber specialists). Where Trade Commissioners are members of a mission maintained by the Department of External Affairs they hold diplomatic status and are known as Commercial Counsellors or Commercial Secretaries.

The Department provides a wide range of services to Canadian businessmen. It comprises: the Canadian Trade Commissioner Service, Commodities Branch (including the Transportation and Trade Services Division), Agriculture and Fisheries Branch, International Trade Relations Branch, Trade Publicity Branch, Industrial Development Branch, Small Business Branch, Economics Branch, Energy Studies Branch, Standards Branch, International Economic and Technical Co-operation Division and the Canadian Government Exhibition Commission.

The following boards, commissions, Crown corporations and agencies report to Parliament through the Minister of Trade and Commerce—seven of them through his capacity as Chairman of the Privy Council Committee on Scientific and Industrial Research: Board of Grain Commissioners, Canadian Wheat Board, Dominion Bureau of Statistics, Export Credits Insurance Corporation, Northern Ontario Pipe Line Crown Corporation, Atomic Energy Control Board, Atomic Energy of Canada Limited, Canadian Patents and Development Limited, National Research Council, Eldorado Mining and Refining Company Limited, Eldorado Aviation Limited, and Northern Transportation Company Limited.

Department of Transport.—The Department was created on Nov. 2, 1936, from the former Departments of Marine, and Railways and Canals, and the Civil Aviation Branch of the Department of National Defence (R.S.C. 1952, c. 79).

The work of the Department consists of four main Services: Marine, Air, Canals and Railways. The work of the Marine Service includes aids to navigation, nautical and pilotage services, marine agencies, steamship inspection and floating equipment and direct supervision over 300 public harbours; eight other harbours come under supervision of the Department but are administered by commissions. Air Services cover the operation of civil aviation, meteorological and telecommunication branches. The latter includes the administration and regulation of radar, radio marine and radio aeronautical aids to navigation and communication by wire and by government telegraph and telephone. The Canal Service has jurisdiction over the canals and canalized waterways of Canada. These include the main or primary canals on the St. Lawrence River and Great Lakes and a number of subsidiary or secondary canals.

Other services of the Department are in connection with the Government-owned companies: the Canadian National Railways, Hudson Bay Railway, Canadian Government Railways, Canadian National (West Indies) Steamships, and the Prince Edward Island Ferry and Terminals.

The Minister of Transport is responsible to Parliament for the following boards and commissions: the Air Transport Board; Board of Transport Commissioners; Canadian Maritime Commission; National Harbours Board; Park Steamship Company Limited; the St. Lawrence Seaway Authority; the Canadian Overseas Telecommunication Corporation; and Trans-Canada Air Lines.

Department of Veterans Affairs.—This Department, established in 1944 (R.S.C. 1952, c. 80), is concerned exclusively with the welfare of veterans and includes medical, dental and welfare services, land settlement and prosthetic services and insurance. The Veterans' Bureau assists veterans in the preparation and presentation of pension claims.

The Minister of Veterans Affairs is also responsible for the Canadian Pension Commission and the War Veterans Allowance Board. The Department has administrative offices in all the larger cities across Canada and at London, England.

Section 2.—Crown Corporations

The Crown corporation form of public enterprise is not a new type of organization in Canada but in recent years, as the work of government has become more complex, greater reliance has been placed on it as the appropriate instrument for administering and managing many public services in which business enterprise and public accountability must be combined.

The use of the corporate device to harmonize public responsibility in the development of economic resources and the provision of public services with the pursuit of commercial and industrial objectives has led to the adoption of many different forms and formulas of management. The most usual practice has been to set up a corporation under the provisions of a special Act of Parliament which defines its purpose and sets forth its powers and responsibilities. However, during World War II the Minister of Munitions and Supply was authorized to procure the incorporation of companies under the federal Companies Act, 1934, or under any provincial Companies Act to which he might delegate any of the powers conferred on him under the Department of Munitions and Supply Act or any Order in Council. Under this legislation about 28 companies were created to serve a wide variety of purposes; most of these companies have since been wound up.

Following the successful experience during the war years in relying on the Companies Act for the establishment of Crown companies, similar incorporating powers were granted by an amendment to the Research Council Act and have been incorporated in the Atomic Energy Control and the Defence Production Acts.

In 1946 the Government Companies Operation Act was passed to regulate the operation of companies formed under the Companies Act. However, it was applicable only to a relatively small number of companies and, in order to establish a more uniform system of financial and budgetary control and of accounting, auditing and reporting for Crown corporations generally, Part VIII of the Financial Administration Act was enacted in 1951 and brought into operation by proclamation on Oct. 1, 1952. Upon its enactment the financial provisions of the Government Companies Operation Act were repealed.

One of the more interesting features of the later legislation is the attempt that has been made to define and classify Crown corporations.* The Act defines a Crown corporation as a corporation that is ultimately accountable, through a Minister, to Parliament for the conduct of its affairs and establishes three classes of corporation: departmental, agency and proprietary.

Departmental Corporations.—A departmental corporation is defined as a Crown corporation that is a servant or agent of Her Majesty in right of Canada and is responsible for administrative, supervisory or regulatory services of a governmental nature. Ten departmental corporations are listed in Schedule B to the Act:—

Agricultural Stabilization Board (formerly Agricultural Prices Support Board)
Atomic Energy Control Board
Canadian Maritime Commission
Director of Soldier Settlement
The Director, The Veterans' Land Act
Dominion Coal Board
Fisheries Prices Support Board
National Gallery of Canada
National Research Council
Unemployment Insurance Commission.

* Not all Crown corporations are subject to the provisions of the Financial Administration Act. For example, the Canadian Wheat Board, the Bank of Canada and its subsidiary, the Industrial Development Bank, because of the special nature of their functions, are excluded from operations of the Crown corporations Part of the Act and are governed by their own Acts of incorporation, as are such joint enterprises of the Federal and Provincial Governments as the Eastern Rockies Forest Conservation Board and the Halifax Relief Commission. Though not included in the Schedules to the Financial Administration Act, certain provisions of the Act apply to the Northern Ontario Pipe Line Crown Corporation, set up on June 7, 1956, to oversee the building of a cross-country natural gas pipeline. The Canada Council was set up under the Canada Council Act (assented to Mar. 28, 1957) as a Crown corporation but has been declared not an agency of the Crown and hence is not included in the Schedules to the Financial Administration Act.

Agency Corporations.—An agency corporation is defined as a Crown corporation that is an agent of Her Majesty in right of Canada and is responsible for the management of trading or service operations on a quasi-commercial basis or for the management of procurement, construction or disposal activities on behalf of Her Majesty in right of Canada. The following agency corporations are listed in Schedule C to the Financial Administration Act or have been subsequently added to that Schedule by the Governor in Council:—

Atomic Energy of Canada Limited
 Canadian Arsenals Limited
 Canadian Commercial Corporation
 Canadian Patents and Development Limited
 Crown Assets Disposal Corporation
 Defence Construction (1951) Limited
 Federal District Commission (now National Capital Commission)
 National Battlefields Commission
 Northern Canada Power Commission (formerly Northwest Territories Power Commission)
 National Harbours Board
 Park Steamship Company Limited.

Two corporations, Canadian Sugar Stabilization Corporation Limited and Commodity Prices Stabilization Corporation Limited, listed in Schedule C when the Financial Administration Act was proclaimed, have since discontinued operations and surrendered their charters. By an Order in Council of June 15, 1955, the name of the Northwest Territories Power Commission (now Northern Canada Power Commission) was deleted from Schedule D and added to Schedule C effective Apr. 1, 1954.

Proprietary Corporations.—A proprietary corporation is defined as a Crown corporation that (1) is responsible for the management of lending or financial operations, or for the management of commercial or industrial operations involving the production of or dealing in goods and the supplying of services to the public, and (2) is ordinarily required to conduct its operations without Parliamentary appropriations. The following proprietary corporations are listed in Schedule D to the Act or have been subsequently added to that Schedule by the Governor in Council:—

Canadian Broadcasting Corporation
 Canadian Farm Loan Board
 Canadian National (West Indies) Steamships Limited
 Canadian Overseas Telecommunication Corporation
 Central Mortgage and Housing Corporation
 Eldorado Aviation Limited
 Eldorado Mining and Refining Limited
 Export Credits Insurance Corporation
 National Railways, as defined in the Canadian National-Canadian Pacific Act, 1933
 Northern Transportation Company Limited
 Polymer Corporation Limited
 The St. Lawrence Seaway Authority
 Trans-Canada Air Lines.

Departmental corporations are governed by the provisions of the Financial Administration Act that are applicable to departments generally. Agency and proprietary corporations, however, are subject to the provisions of the Crown corporations Part of the Act although, if there is any inconsistency between the provisions of that Part and those of any other Act applicable to a corporation, the Act provides that the latter prevail. There is provision in the Part for the control and regulation of such matters as corporation budgets and bank accounts, the turning over to the Receiver General of surplus money, limited loans for working-capital purposes, the awarding of contracts and the establishment of reserves, the keeping and auditing of accounts, and the preparation of financial statements and reports and their submission to Parliament through the appropriate Minister.

A further form of control is exercised by Parliament through the power to vote financial assistance. This may take different forms. For some corporations, capital may be provided by parliamentary grants, loans or advances that may subsequently be converted into

capital stock or bonds; for others it may be by the issue of capital stock to be subscribed and paid for by the Government; or by the sale of bonds either to the Government or the public. A few corporations have financed all or a portion of their requirements from their own resources or earnings. Under a special financing arrangement a 15-p.c. excise tax charged on radio and television sets and their parts and accessories has been allocated to the revenue of the Canadian Broadcasting Corporation.

Prior to 1952, Crown corporations did not pay corporate income taxes. However the Income Tax Act was later amended so that, in respect of financial years commencing after Jan. 1, 1952, proprietary Crown corporations pay taxes on income earned in the same manner as any privately owned corporation. One desirable result of this amendment is that the financial statements of these Crown companies are now more comparable with those of private industry, with which in some instances they are in competition, and thus it is easier to assess the relative efficiency of their operations.

The functions of the various Crown corporations are given briefly in the following paragraphs. For a number of them further details are included in the Chapters dealing with the subjects concerned (*see* Index).

Agricultural Stabilization Board.—The Board was established in 1958 (S.C. 1957-58, c. 22) to administer the provisions of the Agricultural Stabilization Act, which has replaced the Agricultural Prices Support Act. The Board reports to Parliament through the Minister of Agriculture.

Atomic Energy Control Board.—In December 1946, by Act of Parliament (R.S.C. 1952, c. 11), the regulation and control of atomic energy in Canada were placed under the Atomic Energy Control Board. The Board reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Atomic Energy of Canada Limited.—This Crown Company was incorporated in February 1952 under the Atomic Energy Control Act, 1946 (R.S.C. 1952, c. 11) to take over from the National Research Council on Apr. 1, 1952, the operation of the Chalk River project. The main functions of the Company are the research into many aspects of atomic energy, the operation of atomic reactors and the extraction, processing and marketing of the by-products of the reactors. The Company reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Bank of Canada.—Legislation of 1934 (R.S.C. 1952, c. 13) provided for the establishment of a central bank in Canada, the function of which is to regulate credit and currency, to control and protect the external value of the Canadian dollar and to stabilize the level of production, trade, prices and employment so far as may be possible within the scope of monetary action. The Bank acts as the fiscal agent of the Government of Canada, manages the public debt and has the sole right to issue notes for circulation in Canada. The Bank is managed by a Board of Directors appointed by the Government and composed of a Governor, a Deputy Governor and 12 Directors; the Deputy Minister of Finance is also a member of the Board. The Bank reports to Parliament through the Minister of Finance and is governed by its own Act of incorporation. (*See* footnote, p. 104.)

The Canada Council.—Established by Order in Council dated Apr. 15, 1957, this Corporation of 21 members, a Director and an Associate Director operates under the terms of the Canada Council Act, assented to Mar. 28, 1957. Its functions are the encouragement of the arts, humanities and social sciences in Canada. Its work is financed from the earnings of a \$50,000,000 Endowment Fund and a \$50,000,000 University Capital Grants Fund. In the making, managing and disposing of investments under the Act, the Council has the advice of an Investment Committee of five, including the Chairman and another member of the Council. The proceedings of the Council are reported each year to Parliament through the Prime Minister.

Canadian Arsenals Limited.—This Company was established under the Companies Act by Letters Patent dated Sept. 20, 1945, and is subject to the Government Companies Operation Act (R.S.C. 1952, c. 133) and certain provisions of the Financial Administration Act (R.S.C. 1952, c. 116). The Company was set up to take over and operate Crown-owned plant and equipment. Among the items it now manufactures are propellants and explosives, small arms, radar equipment, and a wide variety of ammunition and components. Its divisions, together with the location of their plants, are as follows: Dominion Arsenal Division (Quebec and Val Rose, Que.); Explosives Division (Valleyfield, Que.); Filling Division (St. Paul l'Ermite, Que.); Gun Ammunition Division (Lindsay, Ont.); Small Arms Division (Long Branch, Ont.); Instrument and Radar Division (Scarborough, Ont.). The Company is responsible to Parliament through the Minister of Defence Production.

Canadian Broadcasting Corporation.—Legislation passed in 1936 (R.S.C. 1952, c. 32) provides that there shall be a corporation, to be known as the Canadian Broadcasting Corporation, to consist of a Board of 11 Governors appointed by the Governor in Council and chosen to give representation to the principal geographic divisions of Canada. The Board of Governors determines CBC policy and the Chairman of the Board is required to devote the whole of his time to the performance of his duties under the Act.

The General Manager is the Chief Executive of the Corporation and directs the operations and activities of the Corporation as well as the application of CBC policy as determined by the Board of Governors. He is assisted by regional management representatives located in the principal geographic regions of Canada (Newfoundland, the Maritime Provinces, Quebec, Ontario, the Prairie Provinces and British Columbia), and at Head Office by specialists in Programs, Sales, Operations, Administration, Finance, Engineering and Public Relations. Under the Canadian Broadcasting Act, the Corporation reports to Parliament through a Minister of the Crown (at present the Minister of National Revenue).

Canadian Commercial Corporation.—This Corporation was established on May 1, 1946, by the Canadian Commercial Corporation Act (R.S.C. 1952, c. 35). It purchases goods and commodities in Canada for the governments of other countries. It also acts as purchasing agent for international agencies such as the United Nations International Children's Emergency Fund and the United Nations Korean Reconstruction Agency. Other functions include arranging production and shipment of Canadian contributions of military stores to NATO countries. The Corporation also serves other departments of the Government of Canada. For instance it arranges for the purchase and production of supplies and services which the Department of Trade and Commerce is making available to other countries under the Colombo Plan. In carrying out its functions the Corporation works closely with the Department of Defence Production. It is responsible to Parliament through the Minister of Defence Production.

Canadian Farm Loan Board.—The Board was organized in 1929 to make loans, secured by mortgage, to farmers. The Board is responsible to Parliament through the Minister of Finance.

Canadian Maritime Commission.—The Commission was created in 1947 (R.S.C. 1952, c. 38) to consider and recommend policies and measures necessary for the operation, maintenance, manning and development of a merchant marine and a ship-building and ship-repairing industry. The Commission is responsible to Parliament through the Minister of Transport. (See also Park Steamship Company Limited, p. 110.)

Canadian National Railways.—Under authority of the Statutes of 1919, c. 3, the Canadian National Railway Company was incorporated to operate and manage a national system of railways, including the Canadian Northern Railway System, the Canadian Government Railways and all lines entrusted to it by Order in Council. In 1923 the Grand Trunk Railway Company of Canada was amalgamated with the Canadian National Railway Company and since 1923 a number of railway lines acquired by the Government have been entrusted to the Company for operation and management, including the Newfoundland Railway and steamship services in 1949 and the Temiscouata Railway in 1950. The Canadian National Railways Act, 1919 was repealed in 1955 and the Canadian National Railways Act (1955, c. 29) substituted therefor.

The Canadian National Railway Company is controlled by a Chairman and Board of Directors appointed by the Governor in Council, who report to Parliament through the Minister of Transport.

Canadian National (West Indies) Steamships Limited.—Through the medium of this Crown Company, the Federal Government provides direct steamship services to the West Indies in conformity with the Canada-West Indies Trade Agreement of 1926. The Company is responsible to Parliament through the Minister of Transport.

Canadian Overseas Telecommunication Corporation.—This Crown Company was created on Dec. 10, 1949, by Act of Parliament (R.S.C. 1952, c. 42) to acquire for public operation external telecommunication assets in Canada, in keeping with the Commonwealth Telegraph Agreement, signed May 11, 1943. This Agreement was designed to bring about the consolidation and strengthening of the radio and cable communication systems of the Commonwealth. The Corporation is responsible to Parliament through the Minister of Transport.

Canadian Patents and Development Limited.—Canadian Patents and Development Limited is a Crown Corporation established in 1948, pursuant to authority granted in an amendment to the Research Council Act which was passed in 1946. The primary purpose of the Company is to make available to industry, through licensing arrangements, new processes developed by scientific workers of the National Research Council. Its services are equally available to other Government Departments, publicly supported institutions and universities. The Company also has cross-agency arrangements with similar government agencies in other Commonwealth countries. The Board of Directors is composed of representatives from the National Research Council, from Government Departments and from industry and the universities. Any profits that the Company may derive from licensing arrangements are available for further research and development. The Corporation reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research (at present the Minister of Trade and Commerce).

* On Nov. 11, 1953 (after this section was set up in print) new legislation covering the regulation of broadcasting in Canada was proclaimed. See Chapter XIX on Communications, under the section, Broadcasting in Canada.

Canadian Wheat Board.—The Board was incorporated under the Canadian Wheat Board Act to market, in an orderly manner, in the interprovincial and export trade, grain grown in Canada. Its powers include authority to buy, take delivery of, store, transfer, sell, ship or otherwise dispose of grain. Except as directed by the Governor in Council, the Board was not originally authorized to buy grain other than wheat, but since Aug. 1, 1949, it may also buy oats and barley. Only grain produced in the designated area, which includes Manitoba, Saskatchewan, Alberta and parts of British Columbia and Ontario, is purchased by the Board, which controls the delivery of grain into elevators and railway cars in that area as well as the interprovincial movement and export of wheat, oats and barley generally. The Board is governed by its own Act of incorporation (*see* footnote, p. 104). It reports to Parliament through the Minister of Trade and Commerce.

Central Mortgage and Housing Corporation.—This Corporation was incorporated by Act of Parliament (R.S.C. 1952, c. 46) in December 1945 to administer the National Housing Acts. Under the National Housing Act, 1954 (2-3 Eliz. II, c. 23, as amended 1956, c. 9, and 1957-58, c. 18), the Corporation insures mortgage loans made by approved lenders for home ownership and rental housing, makes direct loans, provides home improvement and rental guarantees, undertakes jointly with provincial governments the assembly of land and the construction of housing projects, conducts housing research, encourages community planning and owns and manages rental housing units built for war workers and veterans. The Corporation also arranges for and supervises the construction of housing projects on behalf of the Department of National Defence. The Corporation is responsible to Parliament through the Minister of Public Works.

Crown Assets Disposal Corporation.—This Corporation is established under the Surplus Crown Assets Act (R.S.C. 1952, c. 260) and is subject to the Financial Administration Act (R.S.C. 1952, c. 116). In June 1944 War Assets Corporation was established by statute to replace War Assets Corporation Limited which had been incorporated in 1943. In 1949 the name of War Assets Corporation was changed to Crown Assets Disposal Corporation. The Corporation's function is to dispose of surplus Crown assets. It is responsible to Parliament through the Minister of Defence Production.

Defence Construction (1951) Limited.—This Company was established by Letters Patent in 1951 to take over the general undertakings of Defence Construction Limited. The Company carries out all defence construction with the exception of houses and airfield runways and is responsible to Parliament through the Minister of Defence Production.

Director of Soldier Settlement and Director of the Veterans' Land Act.—The Director of Soldier Settlement (under the Act of 1919) is also the Director of the Veterans' Land Act, and in either capacity is legally a corporation sole. For administrative purposes however the programs carried on under both Acts constitute integral parts of the services provided by the Department of Veterans Affairs.

Dominion Coal Board.—The Board, established in 1947 by the Dominion Coal Board Act (R.S.C. 1952, c. 86), has the responsibility of studying and recommending to the Government policies concerning the production, import, distribution and use of coal. The Chairman has the status of a deputy minister and the Board reports to Parliament through the Minister of Mines and Technical Surveys. The Board administers transportation and other subventions relating to coal, including those under the Atlantic Provinces Power Development Act (1958, c. 25). It also administers loans authorized under the Maritime Coal Production Assistance Act (R.S.C. 1952, c. 173). The Dominion Coal Board Act makes provision for the regulation and control of the production, distribution and use of fuel in time of national emergency.

Eastern Rockies Forest Conservation Board.—The Board was appointed in 1947 under the Eastern Rocky Mountain Forest Conservation Act which authorized an agreement between the Government of Canada and the Province of Alberta relating to the protection and conservation of the forests of that area of the eastern slope of the Rocky Mountains which forms part of the watershed of the Saskatchewan River. The function of the Board is to plan, supervise and undertake construction, operation and maintenance of projects and facilities necessary for the proper protection of the forests of the area to obtain the greatest possible flow of water in the Saskatchewan River and its tributaries.

During the first seven years of the agreement, the Federal Government undertook to provide \$6,300,000 for capital expenditure and Alberta to provide funds for maintenance expenditures. During the period of capital expenditure the Federal Government agreed to appoint the chairman and one member and the province one member. After the capital period the arrangement was that the Federal Government appoint one member and that the Government of Alberta appoint two members and name one of the three as chairman. This latter arrangement became effective on Apr. 1, 1955, and the Province of Alberta is now responsible for all future capital and maintenance costs of this area. Under a further amendment made in 1957, an undertaking by the Federal Government to share in certain forest fire fighting costs was deleted, and upon termination of the agreement all property acquired by the Board is to belong to the province. The Board reports to Parliament through the Minister of Northern Affairs and National Resources. (*See* footnote, p. 104.)

Eldorado Aviation Limited.—Incorporated Apr. 23, 1953, to carry air traffic, both passenger and freight, for Eldorado Mining and Refining Limited and its wholly owned subsidiary, Northern Transportation Company Limited, the Company reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Eldorado Mining and Refining Limited.—Set up in 1944 under the name of Eldorado Mining and Refining (1944) Limited (the date was omitted from the name in June 1952), the Company's business is that of mining and refining uranium ores in Canada. The Company has also entered into contracts for the purchase of uranium concentrates from private producers in Canada. It reports to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Export Credits Insurance Corporation.—This Company commenced operations in 1945 under the Export Credits Insurance Act, 1944 (R.S.C. 1952, c. 105) and is administered by a Board of Directors (including the Deputy Minister of Trade and Commerce, the Deputy Minister of Finance and the Governor of the Bank of Canada) with the advice of an Advisory Council. Its function is to insure Canadian exporters against non-payment by foreign buyers arising out of credit and political risks involved in foreign trade. The Corporation reports to Parliament through the Minister of Trade and Commerce.

Fisheries Prices Support Board.—The Board was set up in July 1947 (R.S.C. 1952, c. 120) to recommend to the Government price support measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and consists of a Chairman, who is a senior officer of the Department of Fisheries, and five members chosen from private and co-operative firms in the industry. The Board has authority to buy fishery products and to sell or otherwise dispose of them or to pay producers the difference between a price prescribed by the Board and the average price the product actually commands.

Halifax Relief Commission.—The Commission, a joint enterprise of the Legislature of Nova Scotia (Statutes of N.S., 1918, c. 61) and the Parliament of Canada (Statutes of Canada, 1918, c. 24), was incorporated to administer relief funds contributed for the assistance of sufferers in consequence of the disastrous explosion at Halifax, Dec. 17, 1917. (See footnote, p. 104.)

Industrial Development Bank.—The Bank, a subsidiary of the Bank of Canada, was incorporated in 1944 to provide loans to industrial enterprises where financing is not available through recognized lending organizations. (See footnote, p. 104.)

National Battlefields Commission.—This Commission was established by Act of Parliament in 1908 to preserve the historic battlefields at Quebec City. The Commission is composed of nine members, seven being appointed by the Federal Government and one each by the Provinces of Ontario and Quebec. The Commission is supported by an annual statutory grant from the Federal Government and is responsible to Parliament through the Minister of Northern Affairs and National Resources.

National Capital Commission.—This Commission had its genesis in the Ottawa Improvement Commission established by Parliament in 1899 to improve and beautify the National Capital by the construction of parks and driveways and to co-operate with the Ottawa municipal authorities in local improvement and conservation works. In 1927 the name was changed to Federal District Commission, its scope of operations widened to include areas adjacent to Ottawa, and its membership increased from four to ten.

In 1946 the Commission became the federal agency responsible for carrying out the National Capital Plan, the long-range master plan for the development of the Capital and its 900-sq. mile region. The membership was increased to 20 to permit the appointment of Commissioners resident in each of the provinces. A National Capital Planning Committee was appointed to act as the permanent honorary advisory body to the Commission on the preparation and implementation of the plan. In 1958 Parliament passed the National Capital Act, reconstituting the organization as the National Capital Commission, and revising the former Act to enable the Commission to discharge more effectively its duties in connection with the preparation of plans for, and assistance in, the development and improvement of the National Capital Region. The region was enlarged from 900 to 1,800 sq. miles.

The Commission carries out its own planning projects and is the federal agency through which joint projects are carried out with local municipal and provincial authorities. Funds for projects are made available by Parliament through a National Capital Fund, established in 1948, and through government loans.

The Commission has built and maintains over 1,000 acres of parks and 24 miles of urban driveways, and in addition landscapes and maintains the grounds of the federal public buildings and national institutions. It is also responsible for the 75,000-acre Gatineau Park in the Laurentian Hills north of the Capital.

Commission approval is required for the location, siting and exterior design of all federal buildings in the region, or for alterations to existing structures.

National Gallery of Canada.—The National Gallery of Canada was founded in 1880. By Act of Parliament in 1913 and re-enacted in 1951 it was placed under the management of a Board of Trustees appointed by the Governor General in Council and now operates under the National Gallery Act (R.S.C. 1952, c. 186). It is responsible to Parliament through a Minister of the Crown (at present the Minister of Citizenship and Immigration).

The first charge of the National Gallery is the development and care of the national art collections. Other important services are the arrangement of loans and exhibitions from abroad and from its own holdings for showing in Canada and abroad, the promotion of good industrial design and general extension work consisting of the distribution of reproductions for educational purposes, lectures, educational tours, publications, school broadcasts and art films.

National Harbours Board.—The Board was established by Act of Parliament in 1936. It is responsible for the administration of port facilities at Halifax, Saint John, Chicoutimi, Quebec, Trois Rivières, Montreal, Vancouver and Churchill, the Jacques Cartier and Champlain bridges at Montreal Harbour, and the Government grain elevators at Prescott and Port Colborne, Ont. The Board is responsible to Parliament through the Minister of Transport.

National Research Council.—In 1917 the Research Council Act was passed and in 1928 laboratories for scientific research were established at Ottawa. The National Research Council now has Divisions of Pure and Applied Chemistry, Building Research, Mechanical Engineering, Radio and Electrical Engineering, Pure and Applied Physics, Applied Biology and Medical Research. Regional laboratories have been established at Saskatoon, Sask., and Halifax, N.S.

Patentable processes and improvements developed by the Council are made available under licence to industry through a Crown company, Canadian Patents and Development Limited, and any profits from the licensing arrangements are used for further research and development.

The Minister of Trade and Commerce as Chairman of the Privy Council Committee on Scientific and Industrial Research is responsible to Parliament for the National Research Council.

Northern Canada Power Commission.—The Commission was established by Act of Parliament in 1948 to bring electric power to points in the Northwest Territories where a need developed and where power could be provided on a self-sustaining basis. The Act was amended in 1950 to give authority to the Commission to provide similar services in Yukon Territory; the name of the Commission, formerly Northwest Territories Power Commission, was changed in 1956. The Commission is composed of a Chairman and two members appointed by the Governor in Council. It operates hydro-electric plants on the Snare River in the Northwest Territories and on the Mayo River in Yukon Territory and diesel-electric plants at Fort Smith and Fort Simpson, N.W.T. Additional plants are under construction at Whitehorse, Yukon and Inuvik, N.W.T. The Minister of Northern Affairs and National Resources reports to Parliament for the Commission.

Northern Transportation Company Limited.—This Company was incorporated in 1947 under the title of Northern Transportation Company (1947) Limited, the date being omitted from the name in 1952. Previously a company chartered under an Alberta statute, it has been a wholly owned subsidiary of Eldorado Mining and Refining Limited since that Crown company was established and carries out the business of a common carrier in the Mackenzie River watershed. The Company is responsible to Parliament through the Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

Northern Ontario Pipe Line Crown Corporation.—This Corporation was established by the Northern Ontario Pipe Line Crown Corporation Act (S.C. 1956, c. 10) for the purpose of constructing the northern Ontario section of the all-Canadian natural gas pipeline and of leasing, with an option to purchase, this section to Trans-Canada Pipe Lines Limited. In addition, the Corporation was authorized to make short-term loans to Trans-Canada Pipe Lines Limited for the construction of the western section of the pipeline. The Corporation is responsible to Parliament through the Minister of Trade and Commerce.

Pipeline installation on the northern Ontario section, which extends from the Manitoba-Ontario border to the vicinity of Kapuskasing, Ont., was completed on Oct. 22, 1958.

Park Steamship Company Limited.—After World War II this Company acted as an agent for Crown Assets Disposal Corporation in the sale and delivery to purchasers of Government war-built ships. This work is completed but the Company remains available to carry out any appropriate duties. It has no staff of its own, any necessary work being done by the staff of the Canadian Maritime Commission (see p. 107). The Company reports to Parliament through the Minister of Transport.

Polymer Corporation Limited.—This Corporation was established in 1942 by Letters Patent under the Companies Act and is subject to the Government Companies Operation Act (R.S.C. 1952, c. 133) and the Financial Administration Act (R.S.C. 1952, c. 116). It was set up to construct

and operate a synthetic rubber plant which now produces a variety of synthetic rubber products and some chemicals. The plant is located at Sarnia, Ont. The Company is responsible to Parliament through the Minister of Defence Production.

St. Lawrence Seaway Authority.—The St. Lawrence Seaway Authority was established by Act of Parliament in 1951 (R.S.C. 1952, c. 242) and came into force by proclamation on July 1, 1954. The Authority is incorporated for the purposes of constructing, maintaining and operating all such works as may be necessary to provide and maintain, either wholly in Canada or in conjunction with works undertaken by an appropriate authority in the United States, a deep waterway between the Port of Montreal and Lake Erie. The Authority is composed of a President, a Vice-President and a Member and reports to Parliament through the Minister of Transport.

Trans-Canada Air Lines.—TCA came into being by Act of Parliament in 1937 (R.S.C. 1952, c. 268) to provide for the development of a publicly owned scheduled transcontinental air service. Transatlantic air services were inaugurated by TCA on behalf of the Canadian Government during World War II and scheduled operations were commenced at the end of the War. TCA now maintains passenger, mail and commodity traffic services over nationwide routes and also services to the United States, England, Scotland, Ireland, France, Belgium, Switzerland, West Germany, Bermuda, the Bahamas, Jamaica, Barbados and Trinidad. TCA is responsible to Parliament through the Minister of Transport.

Unemployment Insurance Commission.—The Commission was appointed on Sept. 24, 1940, under the provisions of the Unemployment Insurance Act, 1940 (R.S.C. 1952, c. 273) for the purpose of administering the Act and providing a National Employment Service. It is composed of three Commissioners, appointed by the Governor in Council, of whom one shall be Chief Commissioner. One Commissioner, other than the Chief Commissioner, shall be appointed after consultation with organizations representative of workers and the other after consultation with organizations representative of employers. The Chief Commissioner shall be appointed to hold office for a period of ten years and each of the other Commissioners shall be appointed to hold office for a period not exceeding ten years. The Commission is responsible to Parliament through the Minister of Labour.

Section 3.—Acts Administered by Federal Departments*

List of the Principal Acts of Parliament Administered by Departments of the Government of Canada

NOTE.—Copies of individual Acts of Parliament and amendments may be obtained from the Queen's Printer, Ottawa, at prices of from 10 cents to \$1.50 per copy according to number of pages. Where duplications of certain Acts appear in the list, parts of these Acts are administered under the Departments given.

PART IV.—FEDERAL GOVERNMENT EMPLOYMENT

The Civil Service Commission.—The Federal Civil Service comprises, in the widest sense, all servants of the Crown—other than those holding political or judicial office—who are employed in a civil capacity and whose remuneration is paid wholly and directly from moneys voted by Parliament. Collectively they form the staffs of the various departments, commissions, boards, bureaux and other agencies of the Federal Government. Nearly every category of occupation is represented in the Civil Service. A few civil servants are appointed by one or both Houses of Parliament directly and a considerable number are appointed by departments and other agencies in accordance with the provisions of certain statutes, generally with executive approval of the Governor in Council. The remainder, by far the majority, are selected and appointed by the Civil Service Commission of Canada.

The Civil Service Commission as the central personnel agency of the Federal Government is the custodian of the merit principle in respect of both initial appointments and promotions. The steps by which the Commission came to be established in its present form constitute the record of Civil Service reform in Canada which began a year after Confederation and culminated in the passing of the Civil Service Act of 1918.

Recruitment.—The recruitment of civil servants is conducted by means of open competitive examination through which every citizen has the right to compete for positions in the service of his country. Examinations are held periodically as the staff requirements of the public service dictate. Any Canadian citizen may apply for headquarters positions open at Ottawa but applicants for local positions must normally be residents of the locality in which the vacancy occurs. Competitive examinations are announced through the press and through posters displayed on the public notice boards of post offices, offices of the National Employment Service, offices of the Civil Service Commission, and elsewhere. The examinations may be written, oral, a demonstration of skill, or any combination of these.

The names of persons successful in Civil Service examinations, arranged in order of rank, are recorded on eligible lists. Examination results are formally announced by publication in the *Canada Gazette* and each candidate—successful or unsuccessful—is advised of his standing. Appointments are made as required from the eligible lists which usually remain valid for one year.

The rank of the various successful candidates on eligible lists is influenced by the 'veterans' preference'. Actually the preference is limited largely, in accordance with its definition by law, to members of the Armed Forces who have served overseas in World War I or II or in the Korean theatre of operations. The highest order of preference is the 'disability preference' accorded to pensioners of the Armed Forces who as a result of their war service are unable to resume their prewar civilian occupations.

In recent years the Civil Service Commission has decentralized its operations and now has ten district offices and six sub-offices across the country. The Commission is granting an increasing measure of autonomy and responsibility to these offices to permit more efficient service to field agencies.

Staff Training.—In 1947 the Commission set up a Staff Training Division to promote and guide a systematic service-wide training scheme. The training scheme, sponsored by the Commission, is a joint venture undertaken in co-operation with Federal Government departments most of which have parallel training divisions. The Commission's Training Division is primarily a co-ordinating agency. It promotes and organizes activities, trains departmental instructors in the presentation of courses, prepares and on occasion gives courses of general application to all departments, publishes booklets and other training aids, assists departments in developing training to meet specialized needs, and acts as a general clearing-house for the exchange of information on training matters.

Promotion.—It is a prime objective of the Civil Service Act to create a career service. The result is that promotion, like entrance to the Service, is based on merit and a sound promotion system is developing. The present procedure involves the consideration of

three factors: efficiency of candidates in their present positions, fitness for the vacant positions, and seniority or length of service. Appeal machinery under Commission jurisdiction has been set up for those employees who feel that their qualifications have not been properly assessed.

Position Classification and Compensation.—Provision is made in the Civil Service Act for the classifying of positions in the public service. A system of position classification was instituted in 1919 and positions with like duties and responsibilities were classified alike and remunerated equally. Each position has a title, a set of tasks or duties which are proper to it in the organization in which it occurs and, arising out of these duties, a set of qualifications appropriate for their performance. Positions with duties of similar kind are grouped together under a common title to form a class and grades within the class reflect the level of responsibility.

The determination of rates of compensation for each class is a continuing responsibility of the Commission and salary and wage surveys are conducted constantly through its Pay Research Bureau which compiles objective and current information concerning levels of pay within and without the Public Service for the use not only of the Commission but also of the Government and the employees concerned. Position classification is a main-spring in the Commission's primary function of recruitment, involving the fixing of standards of qualification for each class of position.

Organization and Methods.—In recent years there has been an increasing awareness of the extent to which economical administration depends on the adoption of modern management techniques and devices. In 1948 the Commission set up an Organization and Methods Service to study problems of management in collaboration with officials directly responsible for major areas of administration. Briefly, this Service affords practical assistance to departments and other agencies of the Government through the systematic examination of structure, operations, procedures and work methods. Its growing facilities are offered free of charge to all departments.

Statistics of Federal Government Employment.*—The current monthly survey of Federal Government employment, started in 1952, is intended to cover all employees of the Government of Canada; employees in this sense exclude Members of Parliament, judges, persons under contract and members of the Armed Forces, but include Force members of the Royal Canadian Mounted Police. This survey is much more inclusive than the previous statistical series entitled "Civil Service of Canada" and comparisons between the two sets of figures should be made only after very careful study.

The survey is divided into two main portions: (1) departmental branches, services and corporations, and (2) agency and proprietary corporations and other quasi-independent government bodies.

Departmental Branches, Services and Corporations.—Employees in this group are covered in Tables 1 to 4; their salaries are paid from the Consolidated Revenue Fund. Definitions of classifications are as follows. "Salaried" employees include all persons paid on the basis of an annual salary rate with the exception of ships' officers who, though paid an annual salary rate, are subject to special treatment under the regulations made pertaining to the Financial Administration Act. The salaried staff are employed in departmental branches, services and corporations which are subject to regulation by the Treasury Board and for which the positions are outlined in detail in the Estimates of Canada, or are established by means of supplementary Treasury Board Minutes. Thus this group of employees includes persons who are subject to the provisions of the Civil Service Act plus salaried persons employed on the staffs of Cabinet Ministers and appointed by Statute or by Order in Council, and also the salaried staffs of certain administrative branches of the Government that do not fall under the jurisdiction of the Civil Service Act.

* Prepared in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

"Prevailing Rate" employees are those who occupy continuing positions that are subject to prevailing rate legislation and are therefore paid on the basis of the going salary for similar work in the area in which the individual is employed. Regulations made under authority of the Financial Administration Act govern the third group entitled "Ships' Officers and Crews".

These three groups comprise what may be called the "regular" employees of the government service. "Casuals and Others" are persons employed on a non-continuing basis.

¹ Includes Christmas overtime pay of Post Office employees.

Table 3 presents statistics for departmental branches, services and corporations on the basis of a classification by function. The purpose of such classification is to supply a means of studying the operation of governments without the complication that results from differences in administrative establishment. This analysis is useful in three ways. First, it permits a detailed study of employment by the Government of Canada according to the main purposes or functions and, since these functions are not subject to the periodic changes that alter the administrative structure of the government, it is possible to develop a statistical series which, with minor exceptions, is consistent over an extended period of time. Secondly, since differences in administrative establishment are eliminated, it is possible to make meaningful comparisons between Federal Government expenditures on employment and similar expenditures by other levels of government. Thirdly, an analysis of the relationship between expenditures on employment and total expenditures may be made with regard to each function.

3.—Federal Government Employees as at Mar. 31, 1958, and Regular Earnings for the Year Ended Mar. 31, 1958, classified by Function

Note.—Excludes certain Federal Government agency and proprietary corporations, etc., figures for which are given in Table 5.

¹ Regular earnings are for ten months only; statistics were not tabulated for the months of July and August 1957.

² Excludes the Governor General and ten Lieutenant-Governors with salaries amounting to \$139,667 annually.

³ Excludes 325 judges with salaries amounting to \$4,698,000 annually.

⁴ No employment at year end.

⁵ Excludes field parties with earnings of \$819,384.

⁶ Excludes field parties with earnings of \$317,303.

⁷ Excludes 14,439 Post Office employees paid from postal revenues with earnings of \$21,204,329.

⁸ Excludes field parties with earnings of \$21,225.

⁹ Excludes 14,439 Post Office employees paid from postal revenues with earnings of \$21,204,329.

¹⁰ In addition, casual helpers received payments amounting to \$2,333,765 for service during the 1957 Christmas season.

4.—Federal Government Employees as at Mar. 31, 1958, and Regular Earnings for the Year Ended Mar. 31, 1958, classified by Department and Principal Branch or Service

NOTE.—Excludes certain Federal Government agency and proprietary corporations, etc., figures for which are given in Table 5.

Agency and Proprietary Corporations and Other Quasi-independent Government Bodies.—Statistics of this group of persons employed by the Federal Government are presented in Table 5. The activities included in this category are as follows:—

Atomic Energy of Canada Limited	Eldorado Mining and Refining Limited
Bank of Canada	Export Credits Insurance Corporation
Canadian Arsenals Limited	Federal District Commission
Canadian Broadcasting Corporation	Hudson Bay Railway
Canadian Commercial Corporation	Industrial Development Bank
Canadian Farm Loan Board	National Harbours Board
Canadian National Railways	Northern Canada Power Commission
Canadian National (West Indies) Steamships Limited	Northern Ontario Pipe Line Crown Corporation
Canadian Overseas Telecommunication Corporation	Northern Transportation Company (1947) Limited
Canadian Patents and Development Limited	Office of the Custodian
Canadian Wheat Board	Polymer Corporation Limited
Central Mortgage and Housing Corporation	Prince Edward Island Car Ferry
Crown Assets Disposal Corporation	St. Lawrence Seaway Authority
Defence Construction Limited	Trans-Canada Air Lines
Eldorado Aviation Limited	

In order to avoid the disclosure of details concerning the operation of any of these agencies the statistics are published in summary form only.

Venezuela...1953	Ambassador.....	The Roxborough, Ottawa
Yugoslavia...1942	Ambassador.....	17 Blackburn Avenue, Ottawa

Section 2.—International Activities*

Subsection 1.—Canada and Commonwealth Relations, 1957-58

Developments within the Commonwealth during the period under review, mid-1957 to mid-1958, have again demonstrated its vitality and capacity for growth and its continuing significance as a stable political association in the modern world. The process of daily consultation and exchange of information among members of the Commonwealth, an essential feature of their relationship, was continued and strengthened throughout the period. In matters of common concern—defence, foreign policy and economic affairs—Canada maintained, as heretofore, the closest relations with other members of the Commonwealth.

A meeting of the Commonwealth Prime Ministers was held in London, England, from June 26 to July 5, 1957, the first such meeting to be presided over by Prime Minister Macmillan. One of the first official duties of Canada's Prime Minister, the Rt. Hon. John Diefenbaker, was to attend this meeting soon after he assumed office. Other Commonwealth Prime Ministers who attended were Mr. Menzies of Australia, Mr. Nehru of India, Mr. Suhrawardy of Pakistan, Dr. Kwame Nkrumah of Ghana, and Sir Roy Welensky of Rhodesia and Nyasaland. The Prime Ministers of New Zealand, South Africa and Ceylon were unable to attend and were represented by senior members of their governments. Valuable discussions were held on international matters of common concern, including the United Nations, disarmament, relations with the Soviet Union, the Middle East and the Far East, and Commonwealth economic development. The final communiqué referred to the broad similarity of approach and purpose in international affairs which such meetings reveal. The Prime Ministers agreed on the need for constructive action to strengthen and improve the United Nations as an instrument for preserving peace. They were deeply concerned about the problem of disarmament and recognized the value of even a limited agreement in creating conditions in which a more comprehensive disarmament scheme could be developed. The changing nature of the Commonwealth was illustrated by the presence for the first time at such a meeting of the Prime Minister of the new state of Ghana and by the formal notice taken of the forthcoming independence of the Federation of Malaya, both of which were specifically referred to in the final communiqué.

The visit to Canada of Her Majesty Queen Elizabeth II and H.R.H. The Prince Philip in October 1957 was particularly noteworthy. It was a historic occasion when, for the first time, the Parliament of Canada was opened by a reigning Sovereign. Her Majesty, on Oct. 14, delivered the Speech from the Throne at the opening of the First Session of Canada's 23rd Parliament. Towards the end of the period under review, preparations were under way to welcome to Canada H.R.H. The Princess Margaret whose visit took place July 12-Aug. 11, 1958.

In August and September 1957 the Hon. J. M. Macdonnell, Minister without Portfolio, headed a Canadian delegation to the ceremonies marking the independence of Malaya and later visited Singapore, New Delhi, Karachi and London. In October of the same year the Hon. W. J. Browne, Minister without Portfolio, represented Canada at the annual meeting of the Colombo Plan Consultative Committee in Saigon, Vietnam. At this meeting the newest member of the Commonwealth, Malaya, was welcomed as a full member of the Colombo Plan. The Hon. Gordon Churchill, Minister of Trade and Commerce, toured the United Kingdom for a month toward the end of 1957 at the head of a Canadian Trade Mission, the objective of which was to investigate the possibilities for expanding trade between Canada and the United Kingdom.

Ottawa welcomed a number of prominent Commonwealth statesmen during this period, including Prime Minister Menzies of Australia; Mr. Selwyn Lloyd, Foreign Secretary, Mr. Peter Thorneycroft, Chancellor of the Exchequer, Sir David Eccles,

* Prepared by the Department of External Affairs.

President of the Board of Trade, Mr. Reginald Maudling, Paymaster General, and Mr. Heathcoat Amory, Minister of Agriculture of the United Kingdom; Dr. A. J. R. Van Rhijn, Minister of Economic Affairs of South Africa; the Hon. Chief Kolawole Balogun, Minister of Research and Information of Nigeria; and Dr. Kwame Nkrumah, Prime Minister of Ghana. Two members of the Government of Western Nigeria, the Hon. Chief C. D. Akran and the Hon. Chief J. O. Osuntokun, also visited Ottawa.

At the eleventh session of the United Nations General Assembly, Canada was among the Commonwealth countries which sponsored the resolutions admitting Ghana and Malaya to the United Nations.

Conferences of particular Commonwealth interest in which Canada participated, apart from those already mentioned, included: (1) the British Commonwealth Forestry Conference, Wellington, N.Z., October 1957; (2) Commonwealth Finance Ministers' Conference, Mont Tremblant, Que., September 1957; (3) Commonwealth Mining and Metallurgical Congress, 6th Conference, Ottawa and Halifax, September-October 1957; and (4) United Kingdom-Canada Continuing Committee on Trade and Economic Affairs, Ottawa, May 1957. The Mont Tremblant Conference arose from an invitation issued by Prime Minister Diefenbaker at the time of the London meeting of Commonwealth Prime Ministers in July 1957, to Commonwealth Finance Ministers to meet in Canada following the meeting in Washington, D.C., of the International Bank of Reconstruction and Development. Following the Mont Tremblant Conference, which endorsed increased trade and closer economic relations generally among Commonwealth countries, Canadian and United Kingdom Ministers held bilateral talks in Ottawa at which various proposals for expanding trade between the two countries were discussed. Approval was given at Mont Tremblant to the Canadian Government's proposal to hold a Commonwealth Trade and Economic Conference in 1958. Towards the end of the period under review, active plans were under way for that Conference which was held in Montreal in September 1958, the first Commonwealth gathering of its kind in Canada since 1932.

Canada continued to participate with India and Poland in the work of the International Commissions for Supervision and Control, established in 1954 by the Geneva Conference, which ended hostilities in Indo-China.

Canada entered into a number of agreements involving other members of the Commonwealth. An Exchange of Notes in May 1957 amended an agreement of 1951 with India concerning the entry to Canada, for permanent residence, of citizens of India. Bilateral agreements for the avoidance of double taxation were reached with Australia (October 1957) and South Africa (ratification in October 1957 of Agreement reached in September 1956). A Convention with Pakistan for the reciprocal protection of the priority of filing dates of patent applications was signed in January 1958. A Financial Agreement between Canada and India was signed in February 1958.

Canada had maintained a High Commissioner's Office in Ceylon for some time and, in 1957, Ceylon opened a similar Mission in Canada. Canada opened a High Commissioner's Office in Accra in October, 1957. Following the independence of Malaya referred to above, Canada opened a High Commissioner's Office in Kuala Lumpur in March 1958. A Canadian Commissioner to the new Federation of the West Indies was appointed in the spring of 1958; he is resident in Port-of-Spain, Trinidad.

During 1957 Canada made available \$34,400,000 for capital aid and technical assistance under the Colombo Plan to countries in south and southeast Asia. As in previous years, the greater part of Canada's contribution to the Colombo Plan was allocated to India, Pakistan and Ceylon, although other countries also received capital assistance. The technical assistance program, under which Canadian experts are sent to various member countries and technicians and students from there are brought to Canada for study, was successfully continued.

The creation of a new nation in the Caribbean—the Federation of the West Indies—illustrates anew the remarkable ability of the Commonwealth to adapt itself to changing conditions. Following lengthy discussions between the United Kingdom Government

and representatives of the West Indian colonies, a Constitution was proclaimed in July 1957. This Constitution provides that the new Federation shall have full self-government in all matters except questions related to defence, external relations and the maintenance of financial stability, for which the United Kingdom Government retains the right to make such laws as appear necessary. The avowed aim in establishing the Federation is the ultimate achievement of internal self-government within the Commonwealth. The Constitution was brought into full effect on Apr. 22, 1958, when H.R.H. The Princess Margaret inaugurated the federal legislature following the first federal election in March, and a central government was appointed. Canada has maintained trade relations with the West Indies for over two hundred years, an interest which paved the way for Canada-West Indies Trade Agreements in 1912, 1920 and 1925. Coincident with the establishment of the new Federation, Canadian officials have held discussions with federal officials from the West Indies to decide upon ways in which Canada can be of assistance to the new country. A long-term program is being worked out, some of the aspects of which were foreshadowed in a message sent on Mar. 10, 1958, by Prime Minister Diefenbaker to the Governor General of the West Indies and the Advisory Council. Forms of aid are to include the provision of the services of various Canadian experts and a ship suitable for an inter-island shipping service.

Subsection 2.—Canada and the United Nations

During the years 1957 and 1958, the United Nations continued to be confronted with recurrent crises, especially in the Middle East. While the United Nations Emergency Force (UNEF) continued its work of maintaining peace on the Egyptian-Israeli border, the Assembly, at its twelfth session, faced new problems arising on the Syrian border with Turkey, and held an emergency session to deal with a crisis affecting Lebanon, Jordan, and Iraq during the summer of 1958. Among other political issues which came to the attention of the United Nations during this period were the question of Algeria, the tense relations of France with Tunisia in the winter and spring of 1958, and continued repression in Hungary. The problem of disarmament remained a subject of dispute between the Western Powers and the Soviet Union, the latter refusing to take part in the work of the Disarmament Commission from the month of August 1957, while in October the launching of mechanical earth satellites and the development of research for inter-continental ballistic missiles (ICBM) on both sides of the Iron Curtain gave new urgency to this problem.

Throughout the whole of this eventful period, Canada maintained its policy of supporting and promoting the United Nations as an instrument for preserving the peace. Canada was elected to a two-year term of office on the Security Council, beginning Jan. 1, 1958. Canada continued to be represented on the United Nations truce teams in the Middle East, UNTSO and UNEF, and assisted in forming a new organization which was created during the Lebanon crisis, for observation duties on the Syrian-Lebanese border. To this new group—called the United Nations Observation Group in Lebanon (UNOGIL)—Canada contributed 78 officers.

Developments in important United Nations bodies during the period under review are summarized below.

General Assembly.—The twelfth session of the General Assembly met in New York from Sept. 17 to Dec. 15, 1957, under the presidency of Sir Leslie Munro of New Zealand. It was preceded by a brief resumption of the eleventh session of the Assembly on Sept. 10 which was called for further discussion of the Hungarian question. The Canadian representative at this session was Mr. R. A. MacKay, the Permanent Representative of Canada to the United Nations. The Secretary of State for External Affairs, the Hon. Sidney Smith, was Chairman of the Canadian Delegation to the twelfth session of the Assembly. The Prime Minister, the Rt. Hon. John G. Diefenbaker, addressed the session.

Disarmament continued to be a matter of primary concern to the Assembly during its twelfth session. During August 1957 the four Western members of the Sub-Committee of the Disarmament Commission had put forward a plan for a first stage of disarmament

which was discussed in the Sub-Committee but not agreed upon and in the course of the twelfth session the Western powers, including Canada, brought forward a resolution based upon the proposals they had submitted to the Sub-Committee. This resolution was adopted by a large majority. A proposal was also put forward by Canada and other countries to expand the membership of the Disarmament Commission by 14 members, bringing its total strength to 25. This resolution was also adopted. Since both resolutions were opposed by the Soviet Union and other members of the Soviet bloc and since the Soviet Union refused to participate in the enlarged Disarmament Commission, no progress was subsequently made in the field of disarmament as a direct result of the resolutions adopted by the Assembly although negotiations continued between the major powers concerned on specific aspects.

The Assembly also had before it a complaint lodged by Syria concerning alleged threats to its security arising from concentration of Turkish troops on the Syrian-Turkish border. A long debate ensued which, though divisive, seemed to have the effect of dissolving the crisis and the matter was concluded by a tacit agreement among all parties to the dispute that the Assembly should take no action. The Assembly gave its attention to continuing problems in Algeria and Cyprus, and to a dispute between Indonesia and the Netherlands concerning the future status of West New Guinea. It decided that for the twelfth session there should be no change in the character of the representation of China in the Assembly. In the economic field the Assembly took action to increase assistance to under developed countries by deciding to establish a Special Fund for economic assistance which would, through financial and other means, strengthen the prospects for capital investment in these countries. The Assembly also approved the continuation of the United Nations Emergency Force in the Middle East for another year and decided that the Force's expenses would be borne by members of the United Nations in accordance with the scale of assessments, taking into account any voluntary contributions received from such member states.

The resumed eleventh session which met on Sept. 10 considered the official report of the General Assembly's Sub-Committee on the situation in Hungary. It adopted the report of the Sub-Committee, condemned the Soviet Union for its action in Hungary, called upon the Soviet and Hungarian Governments to desist from oppressive measures and requested Prince Wan of Thailand to act as a Special Representative of the General Assembly and to make appropriate recommendations on the Hungarian question. Prince Wan reported later to the twelfth session of the General Assembly that he had been unable to carry out the tasks assigned to him because the Soviet and Hungarian Governments had refused to enter into discussions or to permit him either to visit the Soviet Union or Hungary as a representative of the United Nations.

During the twelfth session of the Assembly, Malaya became the 82nd member of the United Nations. The number of members was later reduced to 81 when Egypt and Syria united to become the United Arab Republic.

Security Council.—On Oct. 1, 1957, Canada, together with Japan and Panama, was elected by the General Assembly to membership on the Security Council for a two-year term commencing Jan. 1, 1958. Canada's participation in United Nations activities was thus increased by reason of its responsibilities as a member of the Council. The more important questions considered by the Security Council during the period under review were a complaint by Lebanon concerning intervention in its internal affairs by the United Arab Republic, and a Soviet complaint concerning United States military flights in the Arctic.

The Council began its discussion of the Lebanese complaint on June 6, 1958. The United Arab Republic representative categorically rejected the Lebanese accusations and asserted that the Council was confronted with a purely internal Lebanese problem. The Council thought otherwise, however, and adopted on June 11, by ten votes in favour with one abstention (U.S.S.R.) a Swedish draft resolution by which it decided to dispatch

immediately an Observation Group to Lebanon (UNOGIL) which would guard against illegal infiltration of personnel or supply of arms or other materiel across the Lebanese borders; the Secretary-General was authorized to take the necessary steps to that end and UNOGIL was requested to keep the Council informed through periodic reports to the Secretary-General. A number of experienced Military Observers were detached from the United Nations Truce Supervision Organization (UNTSO) to afford temporary assistance to UNOGIL. UNOGIL began its work on June 19, with headquarters in Beirut, and established a regular patrol of accessible areas. By Sept. 20, the number of ground observers had increased to 214 and the number of observation posts to 34.

At the request of the U.S.S.R., the Security Council was convened urgently on Apr. 21, 1958, to consider a Soviet complaint requesting immediate measures to put an end to flights by United States military aircraft armed with nuclear weapons in the direction of the frontiers of the U.S.S.R. The Soviet representative attempted to demonstrate that the policies followed by the United States Strategic Air Command constituted a danger to world peace. He failed to obtain any support in the Council and finally withdrew his draft resolution. At a subsequent meeting, the United States delegation introduced a draft resolution recommending the prompt establishment of a zone of inspection in the Arctic region against surprise attack and calling upon the five members of the Subcommittee of the Disarmament Commission, together with Denmark and Norway and any other states having territory north of the Arctic Circle that desired to participate, to join in discussions with a view to agreeing on the technical arrangements required. Canada and several other members of the Council strongly supported the United States proposal. Even the Secretary-General, departing from his usual role of non-participation in public debate, made a statement welcoming the United States initiative. The United States draft resolution as amended by Sweden (*i.e.*, with the addition of a paragraph to express the view that the discussion proposed might serve as a useful basis for the deliberations on the disarmament problem at a Summit conference) received ten votes in favour and one against (U.S.S.R.) and was not adopted, the negative vote being that of a permanent member of the Council. Nevertheless, the entire debate served to focus public attention on the problem of surprise attack and the desirability of finding means to minimize the dangers of accidental war as well as of deliberate aggression.

Among other matters of importance considered by the Security Council during the period under review were: Tunisian and French complaints concerning incidents near the Algeria-Tunisia border; a complaint by Sudan concerning Egyptian troop concentration at the Sudan-Egyptian border; the Palestine question; the question of Kashmir; and the admission of new members. The Security Council also recommended to the General Assembly, which unanimously endorsed this recommendation at its twelfth session, the appointment of the Secretary-General, Mr. Hammarskjöld, for a new five-year term of office.

Economic and Social Council (ECOSOC).—Canada began serving its third three-year term of office on the Economic and Social Council on Jan. 1, 1956. Canada's previous years of service were from 1946 to 1948 and again from 1950 to 1952. In the period reviewed by this article, the Council held its twenty-third, twenty-fourth, twenty-fifth and twenty-sixth sessions. At the twenty-fifth session, Dr. G. F. Davidson, Deputy Minister of Welfare in the federal Department of National Health and Welfare, was elected President of the Council for 1958. As of the end of October 1958, Canada was a member of five of the Economic and Social Council's eight functional commissions—Status of Women, Narcotic Drugs, International Commodity Trade, Statistical and Population.

Ever since the United Nations was established, its ten Specialized Agencies have been the chief instruments through which member states have pooled their efforts in trying to achieve the goals of higher standards of living, full employment and conditions of economic and social progress. Canada is a member of all the United Nations' Specialized

Agencies, and has worked to encourage and develop their programs.* The opportunities for useful and desirable work by the Agencies are unlimited, but since the funds available to them are not, the Council has sought to obtain maximum effect by co-ordinating their activities and by encouraging the application of a system of priorities for their programs. Canada has taken an active part in this phase of the work of the Council. It has particularly recommended that the Specialized Agencies stimulate and support national efforts rather than engage in direct operations.

The Convention of the Intergovernmental Maritime Consultative Organization (IMCO) stipulated that 21 nations, of which seven should each have a total tonnage of not less than 1,000,000 gross tons, must signify their acceptance before this new Specialized Agency could come officially into being. With the deposit of instruments of ratification by Japan and the United Arab Republic on Mar. 17, 1958, the Convention on IMCO came into force on that date. Canada was the first country to ratify the Convention having done so on Oct. 15, 1948. The purpose of IMCO is to promote co-operation among governments in international shipping problems.

In addition, there came into existence on July 29, 1957, the International Atomic Energy Agency (IAEA). This body, though not technically one of the Specialized Agencies, is, like them, an autonomous international organization under the aegis of the United Nations. The provisions of the Statute of the International Atomic Energy Agency concerning both designation and election to the Board of Governors specified several categories of membership, including the selection as designated members of "the five members most advanced on the technical aspects of atomic energy, including the production of source materials". Canada, France, the United Kingdom, the United States and the Soviet Union achieved membership on the Board in this category.

The Economic and Social Council, at its twenty-sixth session held in Geneva during the month of July 1958, discussed United Nations activities in the field of economic assistance to under-developed countries. It adopted a resolution recommending to the General Assembly the establishment of a Special Projects Fund which would enlarge the scope of the existing United Nations programs of assistance to include special projects in certain basic fields, such as extensive surveys of water, mineral and potential power resources, and the creation of training institutes in public administration, statistics and technology, and of agricultural and industrial research and productivity centres. It is expected that the General Assembly will approve the Council's recommendations during its thirteenth session, and that the Special Projects Fund will come officially into being early in 1959. The Canadian Government has announced that it will seek parliamentary approval for a contribution of \$2,000,000 to this Fund in 1959.

The United Nations and its Specialized Agencies have undertaken for many years special programs of assistance to overcome certain acute problems and serious deficiencies that exist in various areas. Since money for these special programs is not available through the regular United Nations budget or through the regular budgets of the Specialized Agencies (these regular budgets are raised by assessing all member states, the scale of assessment being based mainly on gross national product), it must be raised from voluntary contributions made by member states. At the present time the United Nations is sponsoring four special programs: the United Nations Expanded Program of Technical Assistance (ETAP); the United Nations Children's Fund (UNICEF); the United Nations Relief and Works Agency for Palestine Refugees in the Near East (UNRWA); and the United Nations Refugee Fund (UNREF). Canada made substantial contributions to these four programs in 1958: \$650,000 to UNICEF, \$500,000 to UNRWA, \$200,000 to UNREF and \$1,976,875 to ETAP. For 1959 Canada is pledged to contribute \$650,000 to UNICEF, \$500,000 to UNRWA, \$290,000 to UNREF and \$2,000,000 to ETAP.

* Canada's activities in connection with three of these Specialized Agencies—United Nations Educational, Scientific and Cultural Organization, Food and Agricultural Organization and International Labour Organization—are dealt with elsewhere in this volume. See Index.

In addition to these voluntary contributions, Canada paid an annual assessment to the United Nations, to some of the Specialized Agencies and to the International Atomic Energy Agency of about \$3,077,289 in 1957-58. Canada's share of the normal administrative budget of the United Nations proper for that year was at the rate of 3.09 p.c., or \$1,472,511.

Trusteeship Council.—The Trusteeship Council supervises the administration of the agreements between the United Nations and the member states of the United Nations which have responsibility for trust territories. The Council held four regular sessions. Two special sessions were held in the autumn of 1958 to consider questions relating to the Trust Territory of French Togoland.

As of the end of October 1958, the membership of the Trusteeship Council consisted of the seven states which administer trust territories (Australia, Belgium, France, Italy, New Zealand, United Kingdom and United States), and an equal number of non-administering states. Always included in the latter group are the two permanent members of the Security Council, the U.S.S.R. and China, which do not administer trust territories. The other five non-administering countries were Burma, Haiti, India, Paraguay and the United Arab Republic.

During its regular sessions, the Council discussed annual reports submitted by the administering powers on the following territories: Tanganyika and Cameroons under United Kingdom administration; Ruanda-Urundi under Belgian administration; Somaliland under Italian administration; Cameroons and Togoland under French administration; Western Samoa, New Guinea, Trust Territories of the Pacific Islands and Nauru. Their political, economic, social and educational advancement was considered as well as the establishment of intermediate target dates and final time limits for the attaining of self-government or independence.

In the period under review, United Nations missions visited the three trust territories in East Africa—Somaliland, Tanganyika and Ruanda-Urundi. In June 1957, a Special Commission, established by the eleventh session of the General Assembly, visited the territory of French Togoland. France, under a new Statute passed by the Legislative Assembly in 1956, had transferred certain powers to the Togolese Government which made it, in the French view, autonomous, and the Commission's terms of reference were "to examine the political situation in the territory resulting from the practical application of the recently adopted Statute and the conditions under which that Statute was being applied". The Special Commission was composed of six members, including Canada. Following the submission of the Commission's report, the French and Togolese authorities decided that elections on a basis of universal adult suffrage to a new legislative assembly would be held in 1958, and agreed that these elections should be supervised by a commissioner to be chosen by the United Nations General Assembly. Ambassador Max D'Orsinville of Haiti was elected as Commissioner by the twelfth session of the General Assembly. His report will be submitted through the Trusteeship Council to the General Assembly at its thirteenth session.

Canadian policy on trusteeship matters before the General Assembly is governed by a careful weighing, within the provisions of the United Nations Charter, of the responsibilities, rights and aspirations of both the indigenous populations and the administering States. It is the Canadian view that the General Assembly should decide broad policy and leave to the Trusteeship Council a reasonable freedom of action in deciding matters of detail.

International Court of Justice.—To "adjust and settle international disputes in conformity with Justice and International Law" is one of the purposes of the United Nations and it was therefore essential to establish a judicial arm for the Organization. The Statute of the International Court of Justice is an integral part of the Charter of the United Nations. All members of the United Nations are *ipso facto* parties to the Statute

of the Court. A State that is not a member of the United Nations may, nevertheless, become a party to the Statute of the Court on conditions to be determined in each case by the General Assembly upon the recommendation of the Security Council. Thus, at the moment, the total number of parties to the Statute is 84—81 members of the United Nations and 3 non-members (Liechtenstein, San Marino and Switzerland). The Court is composed of 15 judges who are elected in individual capacities. Judge John E. Read of Canada was elected to the Court in 1946 and again in 1949.

Subsection 3.—Canada and the North Atlantic Treaty

Within less than two years of the end of World War II in 1945 and the establishment of the United Nations, hopes of a lasting peace gave place to growing anxiety. The United Nations Security Council, which had been given responsibility for maintaining world-wide security, was deliberately prevented by the U.S.S.R. representatives from fulfilling this function. The Soviet Union maintained its armed forces after the War at a level that insured to itself a preponderance of military strength in Europe. The Soviet Government blocked attempts by the Western Powers to reach a peace settlement in Europe and communist parties were used as an instrument of Soviet policy to sabotage Western European efforts at economic recovery and political co-operation. Under these circumstances, the countries of the Atlantic community felt themselves in grave peril of Soviet aggression and communist subversion and therefore took special collective measures under the United Nations Charter to maintain peace.

The first step in this direction was taken in the spring of 1948 when Belgium, France, Luxembourg, the Netherlands and the United Kingdom signed the Brussels Treaty establishing Western Union. On Apr. 4, 1949, as a result of negotiations between these countries and Canada and the United States, the North Atlantic Treaty was signed at Washington, D.C. This Treaty was accepted by all major groups of opinion in Canada and was passed without a single dissenting vote in Parliament.

The original signatories of the Treaty were Belgium, Canada, Denmark, France, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, the United Kingdom and the United States. In September 1951 it was agreed that Greece and Turkey should be invited to accede to the Treaty and they were admitted in February 1952. In October 1954 a protocol to the North Atlantic Treaty inviting the Federal Republic of Germany to join NATO was approved together with related arrangements which provided for the establishment of a Western European Union (composed of the Brussels Powers, the Federal Republic of Germany, and Italy) and for the restoration of full sovereignty to the Federal Republic of Germany. These measures, designed to bring the Federal Republic of Germany into close and enduring association with the Atlantic Community of free nations, were adopted following the failure of the European Defence Community Treaty which was rejected by the French Assembly in August 1954. On May 6, 1955, the Federal Republic of Germany deposited in Washington its instrument of accession to the North Atlantic Treaty and thus joined NATO as its fifteenth member.

The terms of the Treaty and the organization of the Council and subordinate committees are dealt with in the 1954 Year Book at pp. 113-115.

Developments during 1956-58.—The North Atlantic Council continued in permanent session at Paris, France, under the Chairmanship of the Secretary-General, Lord Ismay and his successor M. Paul-Henri Spaak whose appointment took effect in May 1957. Mr. L. D. Wilgress exercised his responsibilities as Permanent Representative of Canada to the Council until October 1958, when he was succeeded by Mr. Jules Leger, the former Under-Secretary of State for External Affairs. In addition to the regular meetings of the Permanent Representatives, Ministerial sessions were held at Paris in May and December 1956 and at Bonn in May 1957. In December 1957, the Heads of

Government of NATO countries met, in Paris, for the first time and a special meeting of Defence Ministers was held in April 1958 to review the implementation of the important decisions taken in December. In May 1958, the Foreign Ministers of the NATO countries met in Copenhagen to discuss various political and economic problems of concern to NATO and in particular the important questions relating to a possible East-West Summit conference.

At the December meeting, the Heads of Government together with Finance, Defence and Foreign Ministers were concerned with the major military and political problems facing the Alliance, with particular reference to the implications for NATO of the Soviet scientific successes in the immediately preceding months and the measures required of the Alliance to meet the situation. The decisions taken, as outlined in the Declaration and Communiqué released at the close of the meeting, included measures to strengthen the Alliance in the interests of collective security and a forthcoming attitude on disarmament and negotiations with the U.S.S.R. It was agreed in principle to establish stocks of nuclear warheads and place IRBM's in NATO countries where required in accordance with agreements to be worked out bilaterally between the United States and host countries; to promote the co-ordination of research, development and manufacture of modern weapons; to encourage through the pooling of scientific information and facilities an increase in the effectiveness of national scientific effort; and to promote closer economic co-operation between members of the Alliance. At the same time emphasis was placed on the desire of all NATO countries for an acceptable disarmament agreement with the U.S.S.R. and offers were made to resume negotiations in the UN Disarmament Committee, or at the level of Foreign Ministers. These decisions guided the activities of the Council during 1958.

NATO's activities during the period under review were also marked by the efforts of member governments to improve and extend NATO co-operation in non-military fields, and to develop greater unity within the Atlantic community.

The North Atlantic Council appointed at its meeting in May 1956 a Committee of Three Ministers, consisting of Dr. Martino, the Foreign Minister of Italy, Mr. Halvard Lange, Foreign Minister of Norway, and the Hon. L. B. Pearson, then Secretary of State for External Affairs for Canada, to advise the Council on ways and means to achieve these objectives. With the aid of questionnaires, supplemented by consultations at the ministerial level with representatives of the other NATO governments, the Committee of Three submitted a report which was approved in principle by the Ministers at the meeting of December 1956 and all recommendations accepted. The report was an important landmark in the development of NATO activities in the non-military field. It stressed the need of members of the Alliance in present circumstances to develop common policies by full and timely consultation on issues of common concern.

Thus the period under review was extremely active for the NATO Alliance, and the Organization, despite differences which any group of 15 sovereign countries is bound to experience from time to time, still displays much resiliency and continues to be as necessary in the face of Soviet policy and actions in Europe and elsewhere as it was at the time of its establishment in 1949.

Canadian Contributions to NATO.—Canada continued in 1957-58 to support NATO with contributions of Armed Forces to the unified NATO commands, with material assistance to other NATO countries and with financial contributions to common budgets. The 4th Canadian Infantry Brigade, which in late 1957 replaced the 2nd Infantry Brigade in the Soest area of Germany, carried out extensive training exercises independently and also in conjunction with other NATO forces in the Northern Army group in Northwest Europe. The Canadian contribution of an air division of 12 jet fighter squadrons to SACEUR remained unchanged. The Royal Canadian Navy had 40 ships assigned to duties connected with the defence of the Canada-United States area and for the protection of any convoys under the control of SACLANT.

Between Apr. 1, 1950, and Mar. 31, 1958, arrangements under the Canadian Mutual Aid Program provided for the transfer by Canada to the non-North American members of NATO of military aid estimated to value \$1,526,900,000.

The main elements of the program include: (a) training in Canada of aircrew for other NATO countries—under the NATO aircrew training program some 4,500 pilots and navigators from ten NATO nations have successfully completed training at RCAF establishments; (b) transfers of equipment from service stocks or from current production for the Services; (c) direct transfers of equipment from current production; and (d) contributions towards infrastructure programs and NATO budgets. Canada's estimated share of the cost of the NATO common infrastructure program for the year ended Mar. 31, 1959, was \$20,000,000. Total Canadian expenditure for NATO Headquarters budgets for the same year is estimated at \$1,750,000.

Subsection 4.—Canada and the Colombo Plan

The Colombo Plan for Co-operative Economic Development in South and Southeast Asia was conceived at the Commonwealth Meeting of Foreign Ministers held at Colombo, Ceylon, Jan. 9-14, 1950. Although the Colombo Plan was initiated by Commonwealth governments, it is not exclusively a Commonwealth program. It is designed to assist in the economic development of all countries and territories in the general area of south and southeast Asia. Its membership now includes Australia, British Borneo (North Borneo, Brunei and Sarawak), Burma, Cambodia, Canada, Ceylon, India, Indonesia, Japan, Laos, Nepal, New Zealand, Pakistan, the Philippines, Malaya (Malaya and Singapore), Thailand, the United Kingdom, and Vietnam, as well as the United States which is also engaged in a substantial program of economic aid in the same region.

Supervision of the Colombo Plan is in the hands of a Consultative Committee of Foreign Ministers of the member countries, who meet once a year to review projects, exchange views on policy matters and prepare an annual report. It is, as its name implies, a "consultative" body; no collective policy decisions binding member countries are taken by its meetings. To develop the technical assistance side of the Plan, a Council for Technical Co-operation, on which Canada is represented, meets regularly in Colombo. The Technical Co-operation Programme, though an integral part of the Colombo Plan, is designed to supplement the technical assistance activities of the United Nations and the Specialized Agencies in the area.

From the beginning of the Plan in 1950 through April 1959, Canada will have made available a total of \$231,000,000 for capital and technical assistance projects in south and southeast Asia. At the Commonwealth Trade and Economic Conference held in Montreal in September 1958, Canada announced an increase from \$35,000,000 to \$50,000,000 in its annual contribution to the Colombo Plan over the next three years. In addition, Canada announced that it will continue to provide substantial sums to less developed countries in the form of loans and grants for Canadian wheat and flour.

While nine separate countries are now receiving capital assistance from Canada, the largest contributions have so far been made in India, Pakistan and Ceylon. The Canadian contribution has consisted primarily of direct assistance to various development projects (equipment for multi-purpose irrigation and hydro-electric projects, the Canada-India NRX atomic reactor, transportation equipment, fishing boats and surveys of resources). It has also included goods which the recipient governments have been able to use as a means of raising some of the money needed to meet local costs of development programs (wheat, flour, copper, aluminum and railway equipment). Canadian aid has been helping these countries in both ways, to develop their economies and raise their standards of living.

Under the Technical Assistance Programme up to September 1958, more than 1,000 persons from many countries in the area had been received for training in Canada in a great variety of technical fields and 120 Canadian experts had been sent abroad for service in Colombo Plan countries in such fields as fisheries, refrigeration, marine biology, agriculture, soil erosion, vocational training, accountancy and the maintenance of tractors and agricultural machinery. Other Canadian experts had been employed on aerial resources survey teams and in the installation and operation of capital equipment. Equipment for technical training in various fields had also been supplied.

The Consultative Committee of the Colombo Plan held annual meetings at Singapore in 1955, at Wellington in 1956, at Saigon in 1957 and at Seattle in November 1958. At the Singapore meeting it was agreed that the Colombo Plan should be extended from July 1957 to June 1961. Reports of the Committee on progress and future plans are published after each annual meeting; each report also contains sections describing the activities of member countries.

CHAPTER III.—POPULATION*

CONSPECTUS

	PAGE		PAGE

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

This Chapter presents only a limited summary of the voluminous data on population recorded by the Censuses of Canada. More detailed information and extended analyses are published in the Census volumes and reports, which are obtainable from the Queen's Printer or the Dominion Bureau of Statistics, Ottawa. A list of such publications and their prices is available on request.

Section 1.—Census of Population

Subsection 1.—History of the Census

A brief account of the early censuses of Canada is given under this heading in the 1956 Year Book at pp. 146-149. More detailed information on the history of census-taking in Canada may be found in Vol. XI (Administrative Report) of the 1951 Census of Canada, in the Administrative Report of the 1941 Census of Canada, and in Vol. I of the 1931 Census of Canada.

Subsection 2.—Growth and Density of the Population

The population history of Canada, from the first census in 1666 when 3,215 persons were enumerated to the 1956 Census when the figure was 16,080,791, reveals an outstanding rate of population growth. Although each census period contributed to this growth, the periods 1901-11, 1911-21, 1941-51 and 1951-56 merit particular mention.†

In the first half of the present century, Canada's population increased from 5,371,315 at the beginning of the period to just over 14,000,000 in 1951, or to 13,648,013 if Newfoundland is excluded. In the thirty years up to 1931 the population almost doubled and

* Revised in the Census (Demography) Division, Dominion Bureau of Statistics.

† An outline of the growth of population in Canada since the beginning of the Seventeenth Century may be found in Vol. I of the 1931 Census. Other accounts of population growth prior to the present century are included in Vol. I of the 1941 Census and Vol. X of the 1951 Census.

between 1931 and 1951 another 3,600,000 was added. The most rapid growth took place in the first decade of the century when the population increased by 1,835,000 and the rate of growth was slightly over one-third. Coincident with the settlement of the western provinces, substantial immigration characterized the whole period from the beginning of the century up to the outbreak of World War I; immigrants entering Canada during the first ten years of this period numbered 1,644,147.

Owing partly to the sharp falling off in immigration during the war years and partly to heavier emigration, the rate of increase of Canada's population in the decade 1911-21 was less than in the previous decade; nevertheless total population advanced by 1,581,000 or about 22 p.c. It should be mentioned that, largely because of the record volume of immigration between 1911 and the outbreak of war, the actual number of immigrants to Canada during this decade was slightly greater than during the period 1901-11, although in terms of total population at the beginning of each of these periods immigration was a relatively less important factor in population growth in the decade 1911-21.

Population growth between 1921 and 1931 was approximately 1,590,000 or only slightly greater than in the previous decade. The rate of increase, at 18 p.c., was less than in the period 1911-21 and only a little more than half the rate recorded in the first decade of the century. Also it is significant that the rate of population growth in Eastern Canada was much closer to the rate of growth in Western Canada than in the period 1901-21. In the decade 1931-41 Canada's population increase, at 11 p.c., was the lowest recorded. Immigration over this decade was not much more than 150,000 or only about one-tenth of the number in each decade since 1901. The depressed conditions existing throughout most of the decade also resulted in a sharp falling off in marriages and in births. As a result, only 1,130,000 was added to the population of Canada over this ten-year period.

Despite the almost complete cessation of immigration during World War II, the decade 1941-51 was marked by a record growth in population numbers. Excluding Newfoundland, the increase amounted to 2,141,000. The rate of growth was just over 18 p.c. or about the same rate as was recorded in the census decade following World War I. Including Newfoundland, the rate of growth of the Canadian population in the period 1941-51 was 22 p.c., raising the Canada total as of June 1, 1951, to just over 14,000,000.

During the first five years of the second half of the present century Canada experienced an outstanding development of its economic resources. Reflecting this expansion, population growth, which in the ten years preceding the 1956 Census had increased by 3,374,000 or 27.4 p.c.,* continued at a high level over the years between the 1951 and 1956 Censuses. Slightly more than 2,000,000 persons were added to the population of Canada in this period, a 14.8-p.c. increase in five years, raising the total population to 16,080,791 on June 1, 1956. Net immigration accounted for almost 30 p.c. of the total increase in population since the 1951 Census, and natural increase for slightly over 70 p.c. In no comparable period of time in the past was the absolute size of net immigration as large as in this five-year period. In terms of the relative contribution of net immigration to population growth, only in the first decade of the century—when it accounted for 40 p.c. of the total population increase—did this element play a more important role than in the years since 1951.†

The record of population growth by provinces since 1901 given in Table 1 indicates the rapid expansion that took place in the Prairie Provinces up to 1921 and the slowing down in growth that followed during the 1920's and was greatly accentuated during the

* Exclusive of Newfoundland since this province did not come into Confederation until 1949.

† More detailed information on the elements of current population growth may be found in 1956 Census Report No. 3-1 *Growth of Population in Canada*.

period 1931-51. It also shows that the Maritime Provinces as a group experienced only a slight gain in population between 1901 and 1931—Prince Edward Island actually losing about 15,000 people over this period—but showed somewhat greater growth since 1931; that the rate of population increase in Quebec by decades over the fifty years 1901-51 was consistently greater than in Ontario, the larger gains in the latter province resulting from net migration being more than offset by the higher rate of natural increase in Quebec; and that the population of British Columbia recorded consistent and, in some decades, spectacular growth.

1.—Numerical Distribution of Population by Province, and Percentage Change from Preceding Census, Decennial Census Years 1901-51 and 1956

NOTE.—Populations for the decennial Census years 1871, 1881 and 1891 are given in the 1956 Year Book, p. 149. The populations of the Prairie Provinces in 1906, 1916, 1926, 1936 and 1946 will be found in the 1951 edition, p. 131.

³ Includes Newfoundland.

⁴ Calculated on the basis of 3,417,193 sq. miles which excludes the land area of Newfoundland.

Subsection 3.—Rural and Urban Population

Before 1951 the population residing within the boundaries of all incorporated cities, towns and villages of a province was classified by the census as urban and the remainder as rural. Since the laws governing incorporation vary among provinces, there was no uniform line of demarcation between the rural and urban population throughout Canada. In the 1951 Census the aggregate number of residents within a given area, rather than provincial legal status, was the main criterion for the rural-urban classification. The population residing in cities, towns and villages of 1,000 or over, whether incorporated or unincorporated, as well as the population of all parts of census metropolitan areas, was defined as urban and that outside such localities as rural. The 1956 Census definition was substantially the same as that used in the Census of 1951 except that the fringe parts of other major urban areas were classed as urban.

A change in the composition of urban size groups was made also for the 1956 Census. At the 1951 Census, each municipality located within the boundaries of a census metropolitan area was allocated to an urban size group according to its own individual size. In 1956, each such municipality was classified to the same urban size group as the total metropolitan area of which it formed a part. In addition, the fringe parts of other major urban areas were included in the tabulations by urban size groups in the same manner as those of census metropolitan areas.

Table 3 presents the rural and urban population by province or territory for 1956. The rural population is further classified by farm and non-farm residence and the urban population by size of locality.

3.—Rural Population classified by Farm and Non-farm, and Urban Population classified by Size Group, by Province, Census 1956

Province or Territory	Rural			Urban Size Groups

For census purposes, metropolitan areas have been established for groups of urban communities that are in close economic, geographic and social relationship. The total population of each of the census metropolitan areas in 1956, with the comparable figure from the 1951 Census covering the same area as in 1956, is shown in Table 6. In this table the metropolitan area has been named after the largest city of the urban group.

6.—Populations of Census Metropolitan Areas 1956 compared with Populations of Same Areas in 1951

¹ Not incorporated in 1951.² Towns of Corner Brook E., Corner Brook W. and Curling amalgamated

to form part of Corner Brook city Jan. 1, 1956.

³ Rural District in 1951.⁴ Rural municipality of St. Leonard

de Port Maurice in 1951.

⁵ Rural municipality in 1951.⁶ Previous to 1953 called Lac St. Louis.⁷ Rural

municipality of St. Joseph de la Rivière des Prairies in 1951.

⁸ Rural municipality of St. Joseph in 1951.

Previous to June 16, 1951, called Beauport E.

¹⁰ Improvement District in 1951.

Subsection 4.—Sex and Age Distribution

Sex.—The sex distribution of the Canadian people has been characterized since early colonial times by a preponderance of males although this condition has been greatly modified in more recent years. In 1666 during the early years of settlement by French immigrants 63.3 p.c. of the population were males. In 1784 when British immigration to Canada was commencing there were 54,064 males and 50,759 females and by the middle of the nineteenth century there were 449,967 males to 440,294 females in Lower Canada and 499,067 males to 452,937 females in the more newly settled Upper Canada.

Since Confederation the newer sections of Canada—the west and the northwest—have shown the greatest excess of males. From 1871 to 1941, for Canada as a whole, the proportion of males never dropped below 51 p.c. of the total population whereas for Western Canada it varied between 53 p.c. and 59 p.c. By 1951, however, the proportion of males to the total population had dropped to 50.6 p.c. for Canada as a whole and in 1956 was 50.7 p.c.

9.—Sex Distribution of the Population, by Province, Census Years 1941, 1951 and 1956

NOTE.—Figures for the census years 1871–1931 are given in the 1948–49 Year Book, p. 150.

Age.—The age distribution of a population is fundamental to most, if not all, other analyses, for the age factor influences employment, marriage, birth rates and death rates, education, immigration, criminology, and a multitude of events and activities that are of great importance in the national life.

Recent trends in vital rates and immigration have considerably changed the age composition of the population of Canada. A high birth rate together with a low death rate among children added, between 1951 and 1956, nearly 1,000,000 to the population under 15 years of age and raised the proportion of this group to the total population from 30.3 p.c. to 32.5 p.c. On the other hand, the relative proportion of the working-age groups—persons from 15 to 64 years of age—was 2 p.c. lower at 59.8 p.c. in 1956 than in 1951 when 61.9 p.c. were in this age group. Without the influx of immigrants during the 1951–56 period, the proportion of this productive group would have been much lower since a large part of it consists of the survivors of those born in the 1930's when birth rates were at their lowest. The proportion of persons 65 years of age or over was slightly less than 8 p.c. at both census dates.

Table 10 shows the population of Canada classified by five-year age groups and sex for the census years 1941, 1951 and 1956. The provincial distribution by specified age groups as recorded in the 1956 Census is shown in Table 11.

Subsection 5.—Marital Status

Next to the sex and age distribution of a population, that of marital status is probably most fundamental from a vital, economic and social viewpoint. The number of married females between 15 and 45 years of age is a most significant factor in the fertility of a population; if the proportion of females in this group is small, the expected proportion of births will also be small. In 1956, 64.3 p.c. of all married females were in the age group 15-44 years, as compared with 64.0 p.c. in 1951, 61.2 p.c. in 1941, and 63.5 p.c. in 1931. This trend indicates a movement towards conditions more favourable to a higher birth rate than those that existed during the period of world-wide depression.

The high birth rate of the period 1951-56, which has had such a considerable effect on the increase in the total population and on its age composition, has also been an influence on the increase of 15.7 p.c. in the single population. Most of this gain was in the population under 15 years of age. During the same period, the married population increased by 14.1 p.c., widowed by 10.5 p.c., and divorced by 14.9 p.c. Other striking statistics of marital status are the excess of married males over married females (largely owing to a preponderance of male immigrants whose wives had not yet joined them), the great preponderance of widows as compared to widowers and the large and increasing number of divorced persons.

Subsection 6.—Origins and Birthplaces

Origins.—A population composed of diverse racial stocks gives rise to political, economic and social problems quite different in nature from those of one with a small admixture of foreign elements although, to the extent that certain racial stocks are more readily assimilated than others, the problems are mitigated. It is equally true that the different educational, moral, economic, religious and political backgrounds of a people of mixed origins lend variety and diversity to the national life.

The two basic stocks of the Canadian people are the French and the English; historically the French is much the older and, excepting at the time of the 1921 Census, has always exceeded in numbers any one of the basic British stocks.

For purposes of the census a person's origin or cultural group is traced through his father. For example if a person's father is German and his mother Norwegian the origin is entered as "German". Wherever possible the origin of a person is established by asking the language spoken by the person or by his paternal ancestor when he first came to Canada.

Census of 1951 data are the latest available on origins of the population.

13.—Origins of the Population, Census Years 1931, 1941 and 1951

NOTE.—Figures for census years 1871-1921 are given in the 1948-49 Year Book, p. 154.

Countries of Birth.—The decennial census collects information on the country of birth of immigrant arrivals in Canada and province of birth of Canadian born. For persons born outside of Canada the country of birth as constituted at the date of the census is recorded. Table 14 gives the total population by countries of birth for the census years 1931, 1941 and 1951.

14.—Countries of Birth of the Population, Census Years 1931, 1941 and 1951

NOTE.—Figures for census years 1871–1921 are given in the 1948–49 Year Book, p. 153.

Subsection 8.—Languages and Mother Tongues

Tables showing the numbers of persons speaking one, both or neither of the official languages of Canada and showing mother tongues of the population at the date of the 1951 Census are given in the 1957–58 Year Book at pp. 138–139. Further details may be found in Vol. I of the *Ninth Census of Canada 1951*.

Subsection 9.—Households, Families and Dwellings*

Households and Families.—Only the principal statistics on households and families recorded at the Census of 1956 are given here—additional summary figures are given in the 1957-58 Year Book at pp. 141-143 and detailed information may be found in 1956 Census Reports 1-13 to 1-20 inclusive.

The total number and average size of households and families for census years 1951 and 1956 are shown in Table 16 for provinces and for cities of 30,000 population or over. These figures show a consistent trend towards larger families in 1956 as compared with 1951, although the average size of household remained relatively stable over the five-year period.

* Census definitions are briefly as follows: *DWELLING*.—A *Dwelling* is defined as a structurally separate set of living premises with private entrance from outside the building, or from a common hallway or stairway inside. A *Single Detached Dwelling* is a house containing one dwelling unit and completely separated from any other building. *Apartments and Flats* include dwelling units in apartment blocks, in duplexes or triplexes, and in structurally converted houses, and living quarters in business premises, schools, etc. In determining the number of *Rooms* in a dwelling, only those suitable for living purposes are included. A *Crowded Dwelling* is defined as one in which the number of persons exceeds the number of rooms occupied.

HOUSEHOLD.—A *Household* is a person or group of persons occupying one dwelling unit, the number of households thus equalling the number of occupied dwellings.

FAMILY.—A *Family* is a husband and wife (with or without children) or a parent with an unmarried child (or children) living together in the same dwelling. Unmarried sons and daughters under 25 years of age and living with their parents are classed as children as well as wards and guardianship children under 21 years of age.

² Exclusive of the Yukon and Northwest Territories.

In Table 17 households are classified according to the number of persons, the number of family groups, and the number of lodgers they contain. This information is shown for Canada as a whole with comparable figures from the 1951 and 1956 Censuses. It will be seen that the two-person household was the most common household size in both years, and in 1956 two-person households represented nearly 22 p.c. of all households. The percentage of multiple-family households and households with lodgers showed a decrease between 1951 and 1956. This is consistent with the fact previously stated that, although families showed a noticeable increase in size between 1951 and 1956, there was no corresponding increase in size of household. (For later sample-survey figures on families, see p. 165.)

Dwellings.—Since a census of housing was not taken in 1956, the latest census information on dwellings is for the year 1951. Table 18 indicates the changes that took place in certain dwelling characteristics during the decade 1941 to 1951.

18.—Dwelling Characteristics, Census Years 1941 and 1951

¹ Exclusive of hotels, institutions, camps, etc.

² Includes auto-trailers, houseboats, tents and other miscellaneous types.

³ For cities of 30,000 or over only.

⁴ For exclusive use of household.

⁵ Includes

'rent-free' dwellings.

Statistics relating to household conveniences in 1951 generally reflect an increasing level of prosperity in both urban and rural areas within the 1941-51 period. In 1951 over 60 p.c. more homes had indoor plumbing, electricity and furnace heating than in 1941. There was also a substantial increase in the number of homes equipped with such conveniences as mechanical refrigerators, electric vacuum cleaners, telephones, radios and passenger automobiles. While much of this advance may be attributed to general prosperity, part of the trend is accounted for by increasing urbanization of the Canadian population and the availability of modern conveniences to rural areas. (For later sample-survey figures on household conveniences, see p. 165.)

Subsection 10.—Blind and Deaf Population

A table showing the number of totally blind and totally deaf persons in Canada at the time of the 1951 Census is given in the 1957-58 Year Book at p. 145. Further details on the blind and deaf population may be found in Vol. II of the *Ninth Census of Canada 1951*.

Section 2.—Intercensal Surveys

Subsection 1.—Population Estimates and Movement

Intercensal estimates of the population have many uses. They are necessary to the calculation of costs of certain economic and social legislation. Business, educational and welfare organizations utilize population estimates in planning future development. They constitute a base for vital statistics rates, per capita figures of production and trade, and other analyses. They have proved useful for estimates of labour force and other population characteristics of data collected in sample surveys.

Estimates are constructed for the total population of Canada and for each province and become available about the date to which they apply—June 1 of each year. The estimates of population begin with the preceding census counts, to which are added the births of the intervening census year or years and from which the deaths are subtracted; immigrants are added and emigrants subtracted. On emigration no precise information is available. The DBS receives yearly from the United States the number of persons who gave Canada as country of last permanent residence before entering the United States as immigrants, and from the United Kingdom's Board of Trade the number of emigrants from Canada taking up permanent residence in the United Kingdom. Such data, however, are not available from other countries, though the proportion of total emigrants to all other countries is small. Family allowance statistics showing the number of migrant families by provinces are used in estimating interprovincial shifts in population.

Since estimates for successive years are independently calculated from the latest census, the best estimate of the balance of population change is not obtained by subtracting the figure for one year from that for the next year. The following statement shows the data used in preparing the annual estimates for 1956 and 1957. The next succeeding census serves as a basis for revision of the annual estimates.

Item	Period	
	1956-57	1956-58
Population, Census 1956.....	16,081,000	16,081,000
Births ¹	451,000	932,000
Deaths ¹	132,000	270,000
Immigration.....	257,000	449,000
Emigration (estimated).....	68,000	144,000
Population at end of period.....	16,589,000	17,048,000

¹ Final figures used where available and registrations substituted for remaining period.

19.—Estimates of Population, by Province, Intercensal Years 1941-58

NOTE.—At every census the previous post-censal estimates, made at June 1 each year, are adjusted to the newly recorded population figures. Figures for 1941, 1951 and 1956 and for the Prairie Provinces for 1946 are census figures. Figures for 1867-1904 will be found in the 1936 Year Book, p. 141; for 1905-30 in the 1946 edition, p. 127; and for 1931-40 in the 1952-53 edition, p. 143.

Table 20 shows the natural increase and the total population increase according to the census for Canada and the provinces in the periods 1931-41, 1941-51 and 1951-56. The difference between the natural increase and the total increase in population during a period represents the difference between inward and outward movements, i.e., net migration. The net migration data shown for provinces indicate the net movement of population arising partly from interchange of population between provinces and partly from persons entering and leaving the country.

The earlier movement of population on the North American Continent from east to west has not been apparent in Canadian statistics in recent years. The most spectacular changes are shown in the Prairie Provinces and in British Columbia. While the three Prairie Provinces lost by migration about 250,000 persons between 1931 and 1941 and somewhat more from 1941 to 1951, they gained in the period 1951-56. Manitoba lost over 100,000 population between 1931 and 1951 but only 152 persons between 1951 and 1956. Saskatchewan has been a consistent loser since 1931, losing on the average over 15,000 a year during the 1930's, almost 20,000 a year during the 1940's and just under 8,000 a year during the 1950's. Alberta lost over 40,000 persons in the decade 1931-41 but only about 7,000 in the next decade and gained close to 65,000 in the five years 1951-56. British Columbia gained through migration at the rate of about 8,000 persons a year during the 1930's, about 23,000 a year during the 1940's and about 27,000 a year in the first half of the 1950's. On an absolute basis Ontario received more people through migration than did British Columbia but, in relation to its larger population, the gain was only about one-third as important. Most of Ontario's growth through migration was from immigration rather than interprovincial movement of population. Quebec had a slight loss between 1931 and 1951 and a considerable gain in the next five years. Nova Scotia gained population through migration during the 1930's but has been losing ever since; the Maritimes as a whole lost 138,000 persons over the quarter-century.

20.—Numerical Changes in the Population of the Provinces through Migration 1931-41, 1941-51 and 1951-56

Subsection 2.—Age and Sex Estimates

Table 21 gives estimates of the population of Canada and the provinces by age and sex as of June 1, 1958. The method followed in preparing these estimates was much the same as that used in calculating the population estimates, described on p. 162. These estimates are subject to revision following the 1961 Census.

Subsection 3.—Dwelling and Family Estimates

Annually since 1953 a sample survey on dwellings and household facilities and equipment has been conducted in conjunction with the monthly labour force survey. More than 35,000 households chosen by random sampling methods in about 120 different areas are interviewed. Results of the 1958 survey are presented in Table 22.

22.—Dwelling Characteristics, Sample Survey, May 1958

Characteristics	No.	P.C. of Total	Characteristics	No.	P.C. of Total
Occupied Dwellings ¹	4,173,000	100.0	Dwellings with—concluded

¹ Excludes households in the Yukon and Northwest Territories; households of Indians on reserves; such collective-type households as those living in hotels, large lodging houses, institutions, clubs and camps. ² For exclusive use of household.

Estimates of the number of families in Canada and the provinces are also prepared annually. The estimates for 1957 were based on the estimated population in 1957 and on family data secured from the May 1957 sample survey of the labour force.

The estimated number of families in Canada in June 1957 was 3,849,000, an increase of 143,000 or 3.9 p.c. since the 1956 Census. The average number of persons per family showed no change from the 3.8 persons reported by the 1956 Census and only a slight increase from the 3.7 persons reported by the 1951 Census. The number of children in families increased 293,000 in the year between June 1956 and June 1957 and showed an average annual increase of 218,000 children since June 1951. It is interesting to note that since 1951 there has been an increase in the percentage of families having 3 children or more at home and a decrease in the percentage of families having fewer than 3 children or no children.

23.—Estimates of Family Characteristics, 1957 compared with Censuses of 1951 and 1956

Section 3.—The Indians and Eskimos of Canada

The Indians.*—There are more than 170,000 native Indians in Canada today and it is noteworthy that their rate of increase is higher than that of any other segment of the population. They live on more than 2,200 tracts of land which have been reserved for their use and benefit. These reserves are located in every province with the exception of Newfoundland where the provincial government has a responsibility for Indians on the Island and on the Coast of Labrador. Elsewhere in Canada, the Indian Affairs Branch of the Federal Department of Citizenship and Immigration is responsible for the administration of the Indian Act and matters affecting the welfare of Indians.

24.—Indian Land in Reserves and Number of Bands, by Province, Year Ended Mar. 31, 1958

Administration.—The primary function of the Indian Affairs Branch, under the Indian Act, is to administer the affairs of Canadian Indians in a manner that will enable them to become increasingly self-supporting and independent members of the community. Among the important matters that come within the purview of Canadian Indian administration are: the management of Indian reserves and surrendered lands; tribal or band funds; education; welfare projects; relief; family allowances; rehabilitation of Indian veterans on reserves; descent of property; Indian treaty obligations; and enfranchisement of Indians.

The present Indian Act, proclaimed Sept. 4, 1951, was drawn up after a lengthy inquiry of a Special Committee of the Senate and the House of Commons, and after taking into account the views of the Indians themselves expressed at a conference held for that purpose. The overriding consideration that shaped the present Act was the desire to promote the integration of Indians into the general social and economic life of the country.

As a means of achieving this, the Act makes provision for the election of Band councils whose authority extends over a number of areas of immediate concern to Indians resident on the reserve, including such matters as health, regulation of traffic, control of livestock, and management of fish, game and fur. Bands that have achieved an advanced stage of development may enact by-laws having to do with the raising, appropriation and expenditure of money. While most Band councils are elected for a two-year term as provided in the Indian Act, some continue to adhere to appointment by tribal custom. All Bands, however, are given the opportunity to decide which system they will follow.

The Indian Affairs Branch takes a census of the Indian population under its jurisdiction at five-year intervals. The figures for the 1954 Census are given in Tables 25 and 26.

* Prepared in the Indian Affairs Branch of the Department of Citizenship and Immigration, Ottawa.

Education.—The proportion of Indians who have become satisfactorily adjusted to modern conditions is of course greater among those who have taken full advantage of the Federal Government's educational program. Residential schools are available to Indian children from broken homes, orphans or those who, because of isolation or the nomadic way of life of their parents, would otherwise be unable to attend school. For children who can live at home, the Federal Government operates day schools in Indian communities. Alternatively, where conditions are favourable, arrangements are made with local educational authorities for Indian children to attend non-Indian schools. An increasing number of Indian children in the elementary grades have been admitted to schools where other children are enrolled and the majority of Indian children attending secondary school and college classes are educated in association with non-Indians. The Federal Government pays the charges for school fees and books, necessary transportation and, for some students who must live away from home, part or all of the cost of room and board.

Similar assistance is available to Indian young people as an encouragement to obtain vocational and professional training. During the 1957-58 fiscal year, 91 teachers of Indian racial origin were employed in Indian day and residential schools. Indians have qualified in medicine, dentistry, nursing, agriculture and other professions. Preference in appointment to positions in the Indian service is given to qualified Indians.

In the year ended Mar. 31, 1958, there were 477 Indian schools in operation comprising 65 residential schools and 2 hostels, 374 regular day schools, 24 seasonal schools and 12 hospital schools. The enrolment in residential schools was 11,274 and in all other Indian schools 20,079, a total of 31,353. Enrolment by province was: Prince Edward Island, 38; Nova Scotia, 657; New Brunswick, 498; Quebec, 2,372; Ontario, 7,371; Manitoba, 4,907; Saskatchewan, 4,577; Alberta, 4,725; British Columbia, 5,917; Yukon, 291.

27.—Enrolment and Average Attendance at Indian Schools, Years Ended Mar. 31, 1956-58

Year Ended Mar. 31—	Residential Schools		Day Schools		All Schools		
	Enrolment	Average Attendance	Enrolment	Average Attendance	Enrolment	Attendance	
						No.	P.C. of Enrolment
	No.	No.	No.	No.	No.		
1956.....	11,314	10,897	18,257	16,081	29,571	26,978	91.2
1957.....	11,644	11,001	19,389	16,810	31,033	27,811	89.6
1958.....	11,274	10,683	20,079	16,902	31,353	27,585	88.0

A total of 31,353 pupils attended classes in Indian schools during the 1957-58 fiscal year. Of this number, 30,207 were of Indian racial origin and 1,146 were non-Indians. In addition, there were 976 Indian children residing at Indian schools and attending classes in provincial and private schools. The number of Indians enrolled in elementary grades in provincial and private schools was 5,573 and in non-Indian secondary schools and higher education courses there were 1,757 Indians, a total of 7,330 Indian pupils in provincial and private schools. Accordingly, the enrolment of Indians at all educational institutions totalled 37,537. In the year ended Mar. 31, 1958, there were 2,443 Indians receiving secondary and higher education.

Welfare.—During 1957, 19,855 families registered as Indian were in receipt of family allowances on behalf of 57,526 children, representing payments amounting to \$4,411,852. However, these figures are not completely representative since an increasing number of Indians are registering directly for family allowances rather than through the Agency offices and statistics are not available for them; in 1955 just over 7 p.c. were making direct application, a proportion that will increase to almost 40 p.c. in 1958. Departmental records indicate that 4,517 Indians are in receipt of old age security, 1,660 old age assistance, 212 disabled persons' allowances, 271 blind persons' allowances and 262 receive provincially administered and financed mothers' allowances. Except for old age security, these allowances are paid in accordance with a means test and on a sliding scale on the basis of direct application by the Indians themselves. The Federal Government, where necessary, provides direct relief assistance to Indians in the form of food, fuel, clothing, household equipment and other miscellaneous help which the Indians are unable to supply from their own resources. During 1957 the payment of relief food costs by cheque was introduced on an experimental basis in a few agencies. This method will soon replace the present relief-in-kind procedure. With regard to the care of children, juvenile delinquents and crippled, unemployable and aged adults, arrangements are made in co-operation with the provincial authorities for private, foster home or institutional care. In the field of child protection, a formal agreement has been entered into with the Province of Ontario for the extension of the services of Children's Aid Societies to Indian reserves. Special foods are provided to assist in the control and eradication of tuberculosis. Rehabilitation of the disabled generally has been given increased emphasis in all provinces and two formal rehabilitation programs are under way in Manitoba and Alberta.

Expenditures from government appropriation for improving housing conditions were higher in 1957-58 than in the previous year and the contribution made by the Indians increased in proportion. The total estimated expenditure for new houses from appropri-

ation, Band funds, Veterans' Land Act grants and personal contributions* was \$2,386,630. The value of repairs during the year from the same sources amounted to \$439,747. Of these amounts the Indians, through Band funds, Veterans' Land Act grants and personal contributions, provided over 55 p.c. of the cost of new housing and over 59 p.c. of the expenditure on repairs.

Loans are available from a Revolving Loan Fund to assist Indians to become established in agriculture, forestry, fishing, handicrafts, guiding and trapping and to help with the purchase of tools and equipment.

During 1957 a program of urban job placement was initiated with the appointment of Placement Officers in four regions. One of their responsibilities is the permanent placement, through the facilities of the National Employment Service, of selected Indians who have acquired academic and vocational training. A program of rural employment in such fields as forestry, mining, road clearing, construction and agriculture is under development.

Fur Conservation.—During 1957 the fur conservation program undertaken in co-operation with the various provinces was continued. Approximately 152,802 beaver pelts valued at \$1,720,870 were taken in Ontario, Manitoba and Saskatchewan and in these three provinces, about 2,260,045 muskrats valued at approximately \$1,966,986 were trapped. Benefits accruing to Indians from the trapping of these fur bearers amounted to about \$2,212,713. In Quebec, ten fur preserves with a total area of approximately 294,000 sq. miles are set aside exclusively for Indian trapping under the joint management of the Indian Affairs Branch and the Quebec Department of Game and Fisheries. The seven areas in production during the 1957 season produced 20,099 beaver which brought nearly \$327,537 to the Indian trappers.

Eight full-time supervisors are employed across Canada to help the Indians derive the fullest possible benefits from hunting and trapping.

The Eskimos.*—The Eskimos, who according to the 1956 Census number approximately 11,000, form only a small part of the total population of Canada. Nevertheless as citizens of this country and an important part of the human resources of the North they are entitled to the benefits of citizenship and to assistance in meeting the problems arising from the great changes taking place in their environment. They, like the northern Indians, have a standard of living far below the national average. For many of them life has become precarious because of the drastic decline in the supply of caribou, fluctuating fur prices, the increasing penetration into the Arctic from the south, and the growth in population. The long-established patterns of life in Arctic Canada are being altered rapidly but not without serious disturbances in the native economy.

The Government of Canada, through the Northern Administration and Lands Branch of the Department of Northern Affairs and National Resources, and the Indian and Northern Health Services of the Department of National Health and Welfare, is doing everything in its power to ease the plight of those Eskimos and Indians who are faced with hardship and to raise generally the standards of health, education and economic position. Royal Canadian Mounted Police detachments throughout the North perform field duties for both Departments. In fact, the problems involved in looking after a sparse Eskimo population scattered over about 900,000 sq. miles of territory require the continuous co-operation of all northern inhabitants—teachers, missionaries, traders, doctors, nurses, administrators, radio operators and weather personnel. Administrative contact is maintained by radio and through the Central and Western Arctic and Eastern Arctic Patrols which carry representatives of the Administration and other government departments on an annual inspection tour. Officers of the Administration also make periodic visits by air.

* Prepared in the Editorial and Information Division of the Department of Northern Affairs and National Resources, Ottawa.

Family allowances are paid to most Eskimos in kind from a list designed to supplement rather than supplant the normal native diet. Eskimos also enjoy the full benefits of old age security and assistance payments and of allowances for blind persons. Missions, assisted by Federal Government grants, operate hospitals at Aklavik, Chesterfield Inlet, Fort Rae, Fort Resolution, Fort Simpson, Fort Smith and Pangnirtung, and the Department of National Health and Welfare has nursing stations at Cambridge Bay, Baker Lake, Coral Harbour, Fort Good Hope, Fort McPherson, Fort Norman, Tuktoyaktuk, Coppermine, Frobisher Bay, Lake Harbour, Cape Dorset, Hall Lake, Fort Chimo, Port Harrison and Great Whale River. Tuberculosis and other medical surveys are carried out from year to year and treatment where necessary is provided either at the hospitals within the territory or at larger institutions outside.

The Arctic Division of the Department of Northern Affairs and National Resources studies and deals with Eskimo problems. Many Eskimos have taken advantage of unprecedented opportunities for wage employment with mining companies, on the Mid-Canada and DEW radar lines, in transportation and communications, in government construction and with traders and missionaries. In some communities, the shift from the traditional trapping-hunting economy has been very sharp. While raising living standards, wage employment has added to the immediate problems of adjustment. Markets are being found in southern Canada for specialty Arctic foods and other Arctic products. Co-operatives are being introduced to give the Eskimos a greater degree of economic self-sufficiency and to provide education in the social and economic factors that govern their lives.

Increased activity in the North has required an enlarged field staff. Northern service officers, community development officers, and social workers are posted at Frobisher Bay, Cape Dorset, Fort Chimo, Great Whale River, Churchill, Baker Lake, Tuktoyaktuk, Sugluk, Aklavik, Rankin Inlet, Eskimo Point and Cambridge Bay. Some are assigned to the DEW Line to give guidance and assistance to Eskimos newly taking up wage employment; others work in remote areas where the full impact of an industrial society has yet to be felt.

At Frobisher Bay on southern Baffin Island, a Rehabilitation Centre is in operation training former Eskimo patients who, for various reasons, are no longer able to support themselves on the land. By developing special skills, they will again become productive members of society.

Projects, mainly on an experimental basis, are being carried out in order to expand and diversify the Eskimo economy. Handicrafts not only provide revenue but also a means of cultural self-expression. Reindeer herding in the Mackenzie Delta, animal husbandry at Fort Chimo, eiderdown collecting on Baffin Island and Ungava Bay, fishing at Eskimo Point and Frobisher Bay, sealskin tanning, boat-building, and the manufacture of Arctic clothing are a few of the undertakings. Studies to improve Eskimo housing are also in progress. Eskimos in overpopulated or depleted areas are encouraged and assisted to move to areas where game is more plentiful or where employment is available. A fund has been established from which loans may be made to assist Eskimos to carry out approved projects.

Since 1945, the Government has built fourteen schools primarily for Eskimo children. They are at centres spreading from the Mackenzie Delta to northern Quebec. Missions assisted by government grants also operate schools in thirteen Eskimo settlements. By the use of existing buildings the Government was able to establish three additional schools for Eskimos in 1958. Vocational training courses for Eskimos have been started in the south to help develop their mechanical aptitudes and to provide new opportunities for employment. A school and hostel went into operation at Fort Smith in January 1958 and in September the first federally owned composite high school and vocational school in the Territories was opened at Yellowknife and a new hostel opened its doors at Fort McPherson. A school and two hostels are under construction at Inuvik (Aklavik East 3) and additional hostels are planned for Fort Simpson and Frobisher Bay.

Section 4.—Statistics of World Population

World population figures given in Table 28 are from the United Nations *Population and Vital Statistics Reports* for April 1958 and, except as otherwise noted, are official mid-year estimates for 1956. The area figures are from the United Nations *Statistical Yearbook, 1957*.

Estimated Population of the World by Continents.—The statement below presents adjusted estimates of the 1956 mid-year population of the world by continental divisions. These aggregates do not coincide exactly with the sum of the figures for individual countries because they include, in addition, adjustments for over- and under-enumeration, over-estimation, categories of population not regularly included in the official figures, and approximations for those countries that have not provided official 1956 data. The estimates are as follows:—

<i>Continental Division</i>	<i>No.</i>
Africa ¹	220,000,000
North America.....	246,000,000
South America.....	129,000,000
Asia ²	1,514,000,000
Europe ³	412,000,000
Oceania.....	15,100,000
Union of Soviet Socialist Republics.....	200,200,000 ⁴
WORLD TOTAL.....	2,736,300,000
Commonwealth countries.....	664,600,000

¹ Excludes Syria, a province of the United Arab Republic.
² Excludes U.S.S.R. Includes European Turkey.

³ Excludes U.S.S.R. Includes Syria and Asiatic Turkey.
⁴ For Apr. 1, 1956.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

PART I.—IMMIGRATION AND EMIGRATION*

The history of immigration and the Immigration Act and Regulations is dealt with in detail in a special article entitled "Developments in Canadian Immigration" appearing in the 1957-58 Year Book at pp. 154-176. Supplementing that material is an article on the "Integration of Postwar Immigrants" at pp. 176-178 of the present volume.

Section 1.—Immigration Policy and Administration

Since the end of the Second World War it has been the policy of the Government of Canada to stimulate the growth of the population by selective immigration. Efforts are made to choose immigrants of prospective adaptability to the Canadian way of life and to admit them at such times and in such numbers as employment conditions warrant.

Federal immigration policy is governed by the provisions of the Immigration Act and Regulations, which permit the admission to Canada of British subjects by birth or naturalization in the United Kingdom, Australia, New Zealand or South Africa; citizens of Ireland and of the United States; French citizens born or naturalized in France or on the islands of St. Pierre and Miquelon. All, however, must be in good health, be of good character, and have sufficient means to maintain themselves until they have secured employment. Other classes of admissible immigrants consist of persons considered to be desirable in the light of social and economic conditions prevailing in Canada at the time, and possessed of qualifications for successful integration. Also admissible are wives, husbands, unmarried children under 21 years of age, fathers over 65 and mothers over 60 of legal residents of Canada who are in a position to receive and care for their dependants, provided such dependants satisfy the requirements of the Immigration Act and Regulations. Nationals of India, Pakistan and Ceylon are admitted in specified numbers.

The Immigration Branch of the Department of Citizenship and Immigration administers the Immigration Act and Regulations. Twenty-seven visa officers are located abroad at London, Liverpool, Leeds, Bristol, Glasgow, Belfast, Dublin, Paris, Brussels, Berne, The Hague, Copenhagen, Cologne, Berlin, Hamburg, Munich, Stuttgart, Vienna, Oslo,

* Sections 1 and 2 of this Part were revised under the direction of Laval Fortier, Deputy Minister, Department of Citizenship and Immigration, Ottawa.

Stockholm, Helsinki, Lisbon, Rome, Athens, Tel Aviv, New Delhi and Hong Kong. Two offices in the United States—at New York and Chicago—furnish information and counseling but do not issue visas. Personnel at all posts are kept in close touch with economic conditions in Canada and thus are able to advise immigrants regarding prospects for successful settlement. Examination of immigrants and visitors is carried out at 343 ports of entry on the Canadian coasts, at points along the International Boundary, and at certain airports.

A primary objective of administration is satisfactory settlement. The Federal Government assists immigrants in establishing themselves in the Canadian community through the work of the Immigration Branch Settlement Service, the Canadian Citizenship and Canadian Citizenship Registration Branches and other government agencies, and co-operates closely with several voluntary agencies having the same objective.

INTEGRATION OF POSTWAR IMMIGRANTS*

Immigration to Canada since 1945 approached the two million mark by the end of 1958. Approximately one-third of the immigrants have been of British or French stock, the remainder representing about fifty different ethnic origins. To help the immigrants of so many linguistic and cultural backgrounds adjust to life in Canada has been a major undertaking requiring the joint efforts of the government and of the people generally.

The Citizenship Branch of the Department of Citizenship and Immigration is the government agency mainly responsible for the integration of immigrants. The Branch was established in 1941 as the Nationalities Branch of the Department of National War Services, at which time its purpose was to promote better understanding of the various ethnic groups in Canada and to further their contribution to the war effort. In November 1945 the Citizenship Branch was transferred to the Department of the Secretary of State and later became a part of the Department of Citizenship and Immigration when that Department was formed in January 1950. After the War, the Branch directed its attention to the great numbers of immigrants who came to this country, encouraging them to attend language classes and to prepare for Canadian citizenship; and interpreting their needs to the Canadian people, especially to the voluntary organizations that were interested in welcoming and assisting them.

To become a Canadian citizen, the newcomer must have his place of residence in Canada for five years; be able to speak English or French; and must satisfy the court that he has an understanding of the responsibilities and privileges of Canadian citizenship. There is no prescribed examination. Each judge determines the form and extent of the examination in his particular court. A British subject ordinarily does not have to appear for examination before a court but otherwise must fulfil the same requirements as an alien.

The primary step in the integration process is to learn the language. Without a knowledge of the language spoken in a community, there can be no real communication with the people who live there and only an inadequate understanding of the laws and customs of the country. The Citizenship Branch, under arrangements with the provincial departments of education, provides free textbooks and pays 50 p.c. of the amount expended by the provinces towards the teaching costs of language classes. Most of the classes are set up and administered by local school boards. Thus, classes have been made available in almost all of the centres where numbers of immigrants have settled. They are usually evening classes held in schoolrooms during the school year.

* Prepared by the Citizenship Branch, Department of Citizenship and Immigration, Ottawa.

Many voluntary organizations, immigrant aid societies and church groups also provide language instruction. Some of these classes are designed to meet the special needs of housewives, night-workers and others who are unable to attend evening classes. They, too, receive the benefit of free textbooks as do isolated individuals who must learn the language by themselves or with the help of a tutor.

Because preparation for citizenship also requires a basic knowledge of Canada, its institutions and traditions, and an understanding of the structure and functions of the Canadian Government, the Citizenship Branch publishes booklets that are available free to all newcomers and for the use of language and citizenship classes. The booklets include *Canadian Scene* and the Canadian Citizenship Series—*Our Land, Our History, Our System of Government, Our Resources*, and *The Arts in Canada*.

The process of integration involves a great deal more than learning the language and acquiring citizenship. The newcomer must develop a sense of belonging to the Canadian community and this can happen only when he feels he is fully accepted by Canadians and that he is making a contribution to Canadian life. In the economic sense this may happen fairly quickly, but socially and culturally it takes much longer.

The Citizenship Branch has based its integration program on the premise that Canadian culture will be enriched and strengthened by diversity. Traditionally, Canada is a country with two basic cultures—English and French—and from the very beginning of Canada's history as a nation the principle of acceptance of religious, cultural and social differences has been recognized. The influx of immigrants from many ethnic backgrounds has added cultural variety without changing this basic principle. At the same time, all Canadians share a common citizenship within a common framework of government and democratic institutions. All take pride in Canadian achievements and in the development of Canadian culture.

In keeping with the democratic belief in the dignity and freedom of the individual, it is felt that integration should be voluntary and should not be pressed. It is assumed that integration is more moderate in its demands on the immigrant and less painful for him than assimilation would be. Assimilation usually means the complete absorption of the newcomer by the dominant culture. In the process, cultural and social differences are worn off and a more-or-less homogeneous society emerges. Integration, on the other hand, recognizes and respects the cultural contributions that may be made by people of diverse ethnic backgrounds who, nevertheless, are devoted to the welfare of the same country.

The ultimate responsibility for integration rests with the Canadian people for, without their acceptance of the newcomers into community life, there can be no integration. One of the main objectives of the Citizenship Branch therefore has been to encourage understanding and co-operation between old and new Canadians and between the various ethnic groups in the population.

There are many kinds of non-governmental organizations interested in the welfare and adjustment of immigrants which are co-operating with the Citizenship Branch in carrying out its objectives. They include immigrant aid societies, women's organizations, service clubs, welfare agencies, church groups, educational bodies, citizenship councils and ethnic organizations.

The immigrant aid societies have as their express purpose the assistance of newcomers. This they do by meeting the immigrants at the ports of entry, helping them get settled, directing them to the regular community services, and sometimes providing educational programs and special counselling services for them. Other organizations with broader community or educational aims include the integration of newcomers in their program planning. Language classes for housewives, social gatherings, program participation by newcomers, receptions following citizenship court ceremonies—these are some of the ways in which voluntary groups help the new Canadians find their place in the community. In some areas there are dozens of organizations and agencies working on behalf of newcomers. This has led to the formation of co-ordinating bodies or citizenship councils in many centres so that the work may be carried on more effectively and with less overlapping.

Prominent among the groups specially concerned about immigrants are the ethnic organizations, associations of people grouped according to ethnic background—Dutch, German, Italian, Chinese, and so on. While they have a variety of aims and interests, most of the ethnic organizations have a sense of responsibility towards newcomers of their own language and culture and often help them over the difficult early months or even years in the new country. At an ethnic centre the newcomer finds friends who speak his own language and who can explain many of the things that puzzle him about his new environment. He loses his social isolation and finds release from frustrations and tensions. In a strictly practical way, also, many ethnic organizations offer advice and counselling and give assistance in learning the language.

A similar source of help is available to newcomers through the ethnic press. There are over 150 newspapers and periodicals in Canada that are printed in languages other than English or French. Many of these papers publish Canadian news as well as news from the homeland. They help to interpret the Canadian scene and very often the editorial columns offer good advice to newcomers.

Thus the foreign language press and the ethnic organizations both provide a bridge from the old world to the new and facilitate the adjustment of immigrants to their adopted land.

The Citizenship Branch welcomes the activities of voluntary groups on behalf of newcomers and assists them in various ways. Publications, films and filmstrips on citizenship and integration topics are made available for program purposes. *Citizen*, a periodical published five times a year, is designed especially as a service to voluntary organizations engaged in citizenship programs.

Contact between the Branch and non-governmental organizations is maintained by the Liaison Division of the Citizenship Branch. Several area offices have been established for this purpose, one in each of the four western provinces, four in Ontario, two in Quebec and one in the Atlantic region. In addition, a senior officer has been stationed in Toronto and one in Montreal to supervise the servicing of the two most populous provinces, and a national office in Ottawa has the special responsibility of working with national organizations.

The liaison officers are available for consultation regarding the policy and resources of the Citizenship Branch and for assistance in planning citizenship and integration programs or projects. They frequently act in an advisory or resource capacity at conferences, seminars or workshops where integration or intergroup relations are central themes. Financial assistance is sometimes given by the Branch to community projects of a pilot nature, and to organizations that undertake a particular task in the field of integration or intergroup relations. The Citizenship Branch promotes and sponsors regional conferences and other meetings in this field.

The Branch has sponsored two national citizenship seminars, the first in 1953 at Scarborough near Toronto, and the second in 1958 at Minaki near Winnipeg. These occasions gave government officials and community leaders from all parts of Canada an opportunity to exchange ideas on integration problems and the respective roles of government and voluntary organizations.

Section 2.—Immigration Statistics

The numbers of immigrant arrivals in Canada year by year from 1913 to 1957 are shown in Table 1. Tables 2 to 8 provide statistical analyses of the content of the immigration movement in recent years. The numbers of persons refused admission at ports of entry and those deported from Canada in the years 1955-57 are given in Table 9.

During the period 1913-57, 4,124,246 immigrants were admitted to Canada. The annual influx ranged from a high of 400,870 in 1913 to a low of 7,576 in 1942, the average yearly intake for the period being 91,650. The total number of immigrant arrivals in the postwar period 1946-57 was 1,669,340, representing an average of 139,112 a year.

1.—Immigrant Arrivals 1913-57

NOTE.—Figures for 1852-93 are given in the 1942 Year Book, p. 153, and for 1894-1912 in the 1948-49 edition, p. 175.

1957.....	115,765	92,202	38,461	35,736	282,164

In 1957, 77.7 p.c. of the males and 74.9 p.c. of the females arriving were 15 years of age or over as compared with 78.9 p.c. and 77.0 p.c. respectively in 1956. Of those arriving in 1957 who were 15 years of age or over, 56.7 p.c. were married, 39.4 p.c. were single and 3.5 p.c. were widowed or divorced. The total number of single males exceeded the number of single females by 29,550 but there were more females than males in the widowed and divorced categories. In the single class, males were 48.5 p.c. more numerous than females, the numerical superiority being particularly heavy in the age group 15-29 years.

¹ Includes a few minor groups, such as German, French, Italian, etc.

² Reported as Swiss origin but evidently one of the constituent races

³ Includes 118 Syrian in 1955, 80 in 1956 and 92 in 1957.

Destination and Occupation.—Approximately 54 p.c. of the immigrants admitted to Canada in 1957 declared that they would enter the labour force. The other 46 p.c. were wives, children, other dependants and retired persons. Of the workers, 11.4 p.c. were classed as professional and managerial, 7.2 p.c. were in agricultural occupations, 11.6 p.c. in service occupations, 35.9 p.c. in manufacturing, mechanical and construction trades, and 12.9 p.c. were general labourers. Almost 50 p.c. of the gainfully occupied female immigrants were in service occupations.

Ontario absorbed 52.1 p.c. of the arrivals in 1957, Quebec 19.5 p.c., British Columbia and the Prairie Provinces 26.6 p.c. and the Atlantic Provinces 1.8 p.c.

Deportations.—Persons unable to meet the requirements of the Immigration Act and Regulations may be refused admission to Canada upon applying at ports of entry, and certain classes not considered suited to the Canadian way of life may be deported. Regulations covering rejections and deportations are given in the 1957-58 Year Book, pp. 173-174.

9.—Refusals and Deportations, by Cause and Nationality, 1955-57

Returning Canadians.—The number of Canadians who returned to Canada during the years 1950 to 1957 after having resided in the United States were as follows: 1950, 3,518; 1951, 3,635; 1952, 4,707; 1953, 4,606; 1954, 4,516; 1955, 3,942; 1956, 4,740; and 1957, 5,426.

Section 3.—Emigration Statistics

Emigration from Canada is an important factor tending to offset to some extent both present and past immigration activities. The movement to the United States of native-born Canadians as well as of Europeans who originally migrated to Canada attained considerable proportions at certain periods. The figures of Table 10, showing the numbers of persons entering the United States from Canada during the years 1948-57 were obtained from the Immigration and Naturalization Service of the United States Department of Justice. No Canadian statistics on emigration are available.

PART II.—CANADIAN CITIZENSHIP*

Naturalization procedures and events leading to the passing of the Canadian Citizenship Act are given in the 1951 Year Book, pp. 153-155.

Section 1.—The Canadian Citizenship Act

The Canadian Citizenship Act came into force on Jan. 1, 1947, its purpose being to give a clear definition of Canadian citizenship and provide an underlying community of status for all the people of Canada. Since Jan. 18, 1950, the administration of Canadian citizenship has been the responsibility of the Department of Citizenship and Immigration. The provisions of the Act and its several amendments are outlined in some detail in the 1955 Year Book, pp. 177-181. More briefly, they are given in the following paragraphs.

Natural-Born Canadian Citizens, Born before Jan. 1, 1947.—The Act defines the two categories of a natural-born Canadian citizen as (1) a person born in Canada or on a Canadian ship or aircraft; (2) a person born outside of Canada before Jan. 1, 1947, if the responsible parent (the father or, where the father is deceased or where the child is born out of wedlock, the mother) is a Canadian citizen, if he was, on Jan 1, 1947, either a minor or had, prior to that date, been lawfully admitted to Canada for permanent residence and had not, before that date, acquired the citizenship or nationality of another country.

The Act provides that a person in the second category will cease to be a Canadian citizen on attaining the age of 21 years or on Jan. 1, 1954, whichever is the later date, unless he has his place of domicile in Canada at such date or has, before such date and after reaching the age of 21 years, filed a declaration of retention of Canadian citizenship.

Natural-Born Canadian Citizens, Born after Dec. 31, 1946.—A person born outside of Canada subsequent to that date, whose responsible parent is considered a Canadian citizen pursuant to the terms of the Canadian Citizenship Act, is a Canadian if his birth is registered with the Registrar of Canadian Citizenship within two years of its occurrence or within such extended period as the Minister may authorize in special cases.

The person who becomes a Canadian citizen in such manner automatically ceases to be a Canadian citizen on reaching the age of 24 years unless he complies with the requirements as set out for a person born outside of Canada before Jan. 1, 1947, who was still a minor on that date.

Canadian Citizens other than Natural Born.—Before the 1953 amendments to the Citizenship Act the only persons who acquired Canadian citizenship on Jan. 1, 1947, through the transitional clauses of Sect. 9 were persons who were naturalized in Canada before that date, British subjects who had Canadian domicile at the commencement of the Act and women lawfully admitted to Canada and married prior to Jan 1, 1947, whose husbands would have qualified as Canadian citizens if the Act had come into force before the date of marriage. Sect. 9 was amended on June 1, 1953, so that a British subject who had his place of domicile in Canada for at least 20 years immediately before Jan. 1, 1947, need not comply with the requirements of Canadian domicile provided he was not under an order of deportation on Jan. 1, 1947.

Status of Married Women.—Since the commencement of the Canadian Citizenship Act a Canadian woman does not lose Canadian citizenship upon marriage to a non-Canadian and a non-Canadian woman does not become a Canadian citizen upon marriage to a

* Prepared in the Citizenship Registration Branch under the direction of Laval Fortier, Deputy Minister, Department of Citizenship and Immigration, Ottawa.

Canadian citizen. However, a Canadian woman who marries a non-Canadian whose country of allegiance considers her to have acquired its nationality upon marriage may file a Declaration of Renunciation of Canadian citizenship if she wishes to divest herself of her Canadian citizenship. A non-Canadian woman who marries a Canadian citizen must apply to the court for a certificate of citizenship. If she is a citizen of another Commonwealth country she may apply direct to the Minister. The one concession as to the qualifications applicable in both instances is a residence of only one year in Canada rather than the prescribed five years of Canadian domicile.

A Canadian woman who married a non-Canadian prior to Jan. 1, 1947, and ceased to be a British subject may regain her status and be readmitted to Canadian citizenship upon application therefor, whether or not she is a resident of Canada.

Status of Minor Children.—The minor child of a Canadian citizen other than a natural-born Canadian may receive a certificate of Canadian citizenship upon application therefor by his or her responsible parent, the *de facto* guardian, or the mother if she has custody of the child. Provision is also made in the Citizenship Act for the granting of a certificate of citizenship to a minor child in special circumstances, e.g., to a child whose responsible parent is not a Canadian citizen but who has been admitted to Canada for permanent residence. Provision is made for the granting of a certificate to a person who has been adopted or legitimized and who has been admitted to Canada for permanent residence, if the adopter or the legally recognized father is a Canadian citizen.

Loss of Canadian Citizenship.—Canadian citizenship may be lost as follows:—

- (1) A Canadian citizen who when outside of Canada and not under disability (minor, lunatic or idiot) acquires by a voluntary and formal act other than marriage the nationality or citizenship of a country other than Canada. This does not apply if that country is at war with Canada at the time of acquisition but in such a case the Minister may order that he cease to be a Canadian citizen. The purpose of this is to hold the person, if deemed necessary, to his obligations as a Canadian.
- (2) A Canadian citizen who under the law of another country is a national or citizen of such country and who serves in the armed forces of such country when it is at war with Canada. This does not apply if the Canadian citizen became a national or citizen of such country when it was at war with Canada.
- (3) A Canadian citizen, other than natural born or one who has served in the Armed Forces of Canada in time of war, or other related circumstances, who resides outside of Canada for ten consecutive years without maintaining substantial connection with Canada, loses his citizenship automatically, but the period of absence may upon application be extended beyond the ten years for good and sufficient cause.

Loss of Citizenship by Revocation—Applicable Only to Naturalized Persons.—The citizenship of a Canadian citizen other than a natural-born Canadian citizen may be revoked by the Governor in Council for such reasons as trading or communicating with an enemy country during time of war; disaffection or disloyalty while out of Canada or conviction by a court of competent jurisdiction of any offence involving disaffection or disloyalty while in Canada; obtaining a certificate of naturalization or Canadian citizenship by false representation or fraud; residence outside of Canada for not less than six years (without maintenance of substantial connection) since becoming a Canadian citizen or being naturalized in Canada; residence for not less than two years (without maintenance of substantial connection) in a foreign country of which he was a national or citizen at any time prior to his becoming a Canadian citizen or being naturalized in Canada.

Loss of Citizenship by Revocation—Applicable to Both Natural-Born and Naturalized Persons.—The Governor in Council may in his discretion order that any person shall cease to be a Canadian citizen if, upon a report from the Minister of Citizenship and Immigration,

he is satisfied that such person has, when not under a disability (1) acquired voluntarily the citizenship of a foreign country (other than by marriage), (2) taken or made an oath, affirmation, or other declaration of allegiance to a foreign country, or (3) made a declaration renouncing his Canadian citizenship.

Section 2.—Canadian Citizenship Statistics

Data on countries of allegiance and origins of the population were not collected at the 1956 Census so that the latest information available is that for the 1951 Census. Results of that census show that 96.9 p.c. of the people of Canada were Canadian citizens; that 0.7 p.c. were citizens of other Commonwealth countries; 1.7 p.c. of European countries; 0.1 p.c. of Asiatic countries; 0.5 p.c. of the United States; and 0.1 p.c. of other countries. Table 1, classifying the 1951 population by country of allegiance and origin, shows that 98.0 p.c. of the persons of British Isles origins and 99.7 p.c. of those of French origin owed allegiance to Canada. Corresponding percentages for other European and Asiatic origins were 89.3 p.c. and 78.7 p.c., respectively.

Citizenship Certificates Issued.—In 1957, 141,915 Canadian Citizenship Certificates were issued as compared with 79,971 in 1956. During 1957, the Canadian Citizenship Registration Branch recorded 4,422 certificates of registration of births abroad, 751 declarations of intention, 152 declarations of retention of Canadian citizenship and 11 petitions for resumption of Canadian citizenship. Certificates issued free to persons who had

had active military service numbered 691. Corresponding figures for 1956 were 3,868 registrations of births abroad, 1,176 declarations of intention, 116 declarations of retention, one petition for resumption and 201 certificates issued free to persons who had had active military service.

Characteristics of Persons Granted Citizenship Certificates in 1957.—Comparable detailed statistics showing the characteristics of persons granted citizenship certificates are available since 1953; such characteristics include age, marital status, occupation, period of immigration, residence and previous nationality.

Of the 95,462 persons granted citizenship in 1957 only 1 p.c. had immigrated to Canada before 1921, 3 p.c. from 1921 to 1940, 24 p.c. in the period 1941 to 1950 and 71 p.c. since 1950. Regionally these new citizens were distributed as follows: 1 p.c. in the Atlantic Provinces, 19 p.c. in Quebec, 58 p.c. in Ontario, 11 p.c. in the Prairie Provinces and 11 p.c. in British Columbia. Just over 95 p.c. of them resided in urban centres.

Almost 15 p.c. of the persons naturalized during 1957 had been citizens of Italy; 13 p.c. had been citizens of Germany; over 12 p.c. reported former allegiance to countries now parts of the U.S.S.R.; Poland was country of allegiance for just under 11 p.c.; 9 p.c. owed allegiance to a British Commonwealth country; and 9 p.c. to the Netherlands. Only 5 p.c. reported themselves as stateless when applying for Canadian citizenship; these persons had been born mainly in Poland, the U.S.S.R., Yugoslavia, Hungary, Czechoslovakia and Austria.

Of the males granted citizenship certificates in 1957, 26 p.c. were employed in manufacturing and mechanical occupations, 12 p.c. were employed in construction, 11 p.c. were labourers in other than primary industries, 8 p.c. were in professional occupations, 8 p.c. in service, 4 p.c. in agriculture and 4 p.c. in proprietary and managerial occupations. Of the females granted certificates, 54 p.c. were homemakers. Among those employed outside the home, 31 p.c. were in manufacturing and mechanical occupations, 26 p.c. in clerical jobs and 24 p.c. in service occupations.

SECTION 4. NATURAL INCREASE.....	219	VITAL STATISTICS.....	228

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Vital statistics provide a record of community and national development—a measurement of the pace of population growth, the number and distribution of people coming into the various age groups, the relative importance of each of the various causes of death, and population trends generally. This Chapter, moreover, attempts to provide a comparison of principal Canadian vital statistics rates with those of other countries and to present tables on marriages and deaths as well as detailed life tables for males and females. Births and deaths are classified by place of residence (births according to the residence of the mother) and marriages by place of occurrence.

The continuity of vital statistics provides a constant guide to the planning, operation and evaluation of a variety of national activities, notably in public health, education, community planning, and various types of business enterprise. The data are presented so as to be useful for the general reader as well as for students of demography, public health, sociology and other specialized fields. The population data upon which the rates shown in this Chapter are computed are contained in Chapter III (Population) and in the several DBS reports relating to census and intercensal estimates of population. In making both international and interprovincial comparisons of birth, death and marriage rates, it is important to note that part of the differences observed over a period of years as between different countries, provinces or local areas may be caused by differences in the sex and age distribution of the populations involved. Similarly, changes in the rates may be caused partly by changes in this distribution.

The history of the collection of vital statistics in Canada is covered in the 1948-49 edition of the Year Book, pp. 185-188. In addition to the information provided in *Vital Statistics* (Preliminary Report), *Vital Statistics of Canada* and other regular and special reports, certain unpublished data are available on request.

Section 1.—Summary of Vital Statistics

Table 1 gives a summary of the principal vital statistics of the provinces of Canada from 1931 to 1957 and Table 2 shows certain vital statistics for urban centres having at least 10,000 population at the date of the 1956 Census. Data for 1921—when the collection of national statistics was initiated—to 1930 are shown in previous issues of the Canada Year Book.

* Revised in the Vital Statistics Section, Health and Welfare Division, Dominion Bureau of Statistics.

1.—Summary of Principal Vital Statistics, by Province, 1931-57

NOTE.—Figures for the years 1921, when the collection of national statistics was initiated, to 1930 are given in previous editions of the Year Book.

¹ As at the 1956 Census.² Per 1,000 live births.

Section 2.—Births*

The Canadian birth rate in 1921 was 29 per 1,000 population. As a rate of 35 is very high for countries of modern western civilization, the Canadian rate had probably not fallen far, nor for long, before 1921. It fell continuously until 1937 when it reached a low of 20 but, as a result of economic recovery and the War, it rose to 22 in 1940, 24 in 1943 and a record high of 28.9 in 1947. Since then the rate has fluctuated moderately being just over 27 in 1950, 28.5 in 1954, 28.0 in 1956 and 28.3 in 1957.

The birth rates in most provinces followed similar trends but there were some regional differences in the birth rate pattern in recent years. Although all provinces had record high rates immediately following World War II, average birth rates in Ontario and the western provinces were higher during 1951-55 than those for the 1946-50 period, while those for Quebec and the Maritimes were lower. In fact, Ontario, British Columbia and Alberta had all-time record high crude birth rates during the past three to four years.

* For international comparisons see Section 7, pp. 228-229.

It has always been assumed that the Province of Quebec has had the highest birth rate in Canada, but Table 1 shows that since the late 1930's or early 1940's Newfoundland and New Brunswick have had higher birth rates than Quebec. In 1957, Newfoundland had a crude rate of 36.0, followed by Alberta with a rate of 30.8, New Brunswick 30.1 and Quebec 29.8; Manitoba and British Columbia had the lowest rates with 26.0 and 26.1 respectively. However these crude rates are based on total population and therefore do not reflect the fertility of the women who are of reproductive age in the different provinces. A more accurate measure of fertility is the rate based on the number of married women in the population in the main reproductive ages, 15 to 44. The numbers of children born in 1956 and 1957 to every 1,000 married women in this age group were as follows:—

Province	1956	1957	Province	1956	1957
Prince Edward Island.....	216	223	Saskatchewan.....	188	189
Nova Scotia.....	192	194	Alberta.....	196	194
New Brunswick.....	226	229	British Columbia.....	163	163
Quebec.....	215	218			
Ontario.....	167	169	CANADA*.....	187	188
Manitoba.....	171	174			

*Data not available for Newfoundland and the Territories.

On this basis, Prince Edward Island, New Brunswick and Quebec had the highest fertility rate for this whole group of married women of reproductive age and Ontario and British Columbia the lowest.

Also, contrary to popular impression, since 1953 more babies were born each year in Ontario than in the Province of Quebec; in 1957, 150,920 babies were born to Ontario mothers as compared with 141,707 to Quebec mothers. A record total of 469,093 were born to all mothers in Canada in 1957, 18,354 more than in the previous year.

Sex of Live Births.—Wherever birth statistics have been collected they have shown an excess of male over female births. No conclusive explanation of this excess has yet been given. Nevertheless it is so much of an accepted statistical fact that a proper ratio of male to female births has become one of the criteria of complete registration. The number of males to every 1,000 females born in Canada has varied since the middle 1930's between 1,047 and 1,067 annually and averages around 1,057. Provincial sex ratios vary much more widely because of the relatively small number of births involved—the smaller the total number of births, the greater the chance of wide sex-ratio variations from year to year.

3.—Sex Ratio of Live Births, 1931-57

NOTE.—Figures for Newfoundland are included for 1949-57 and those for the Yukon and Northwest Territories for 1950-57.

Hospitalized Births.—In 1957 over 90 p.c. of all Canadian births occurred in hospital. Table 4 indicates the rise in hospitalized births in each province since 1931. Although the percentages have increased steadily in all provinces, they still vary widely from province to province. The existence of prepaid or provincially sponsored hospital, maternity or medical care plans in some provinces, the unavailability of hospital facilities in others—particularly in remote rural areas—and preference for home delivery in some local areas are among the factors accounting for provincial variations in this respect. The noticeable increases in hospitalized births within recent years in those provinces that previously had the lowest proportion may be partly the result of increased hospital services being provided in those areas.

Births in Urban Centres.—Table 2, pp. 200-202, shows the number of births in 1956 and 1957, regardless of where they occurred, to mothers residing in urban centres of 10,000 population or over.

Illegitimacy.*—In 1957, 4 p.c. of the live births in Canada were illegitimate. This percentage is low compared with that of many countries of the world. In the five-year period 1926-30 it was 3 p.c., whereas the average of the years 1951-55 was 3.8 p.c.

* The term "illegitimate", for statistical purposes, does not refer to births conceived out of wedlock but to those in which parents reported themselves as not having been married to each other at the time of the birth or the registration of the birth.

Stillbirths.*—As is shown in Table 6, about 7,000 fetuses, where the mother was pregnant at least 28 weeks, are born dead annually. The 6,837 stillbirths in 1957 represented a rate of 14.6 for every 1,000 fetuses born alive. The stillbirth rate has been cut by more than one-half over the past 25 or 30 years. Although the variations between provincial rates have never been too wide, rates in some provinces have been reduced more than in others. The stillbirth rate among unmarried mothers has been consistently higher than that among married mothers, but this difference has been narrowing in recent years.

* A stillbirth is defined as the birth of a foetus after at least 28 weeks pregnancy which, after complete separation from the mother, does not show any sign of life.

² Figures

Multiple Births.—Approximately one confinement in 90 in Canada results in the birth of more than one child as compared with one in 85 several years ago—in other words the chances of a confinement resulting in the birth of more than one child are less now than formerly. Other facts illustrated by Table 7 are that the proportion of stillbirths is higher among multiple than among single births and is about twice as high for twins and between three and five times as high for triplets

Fertility Rates.—Sex and age distribution of the population is an important factor in determining birth, death and marriage rates. More than 95 p.c. of children born are to women between the ages of 15 and 50, so that, as noted earlier, variations in the proportion of women of these ages to the population as a whole will cause variations in the crude birth rates of different countries or regions even though the fertility of women at each age may be the same. Measures of fertility which are independent of the sex and age distribution of the population have therefore been devised. The best known of these are age-specific fertility rates—either per 1,000 *total* women* or per 1,000 *married* women in these age-groups—and reproduction rates.

Ages of Parents.—Ages of the parents is an important variable in any analysis of birth statistics. The distribution of legitimate and illegitimate live births by the age of the parents is given in Table 8, and for stillbirths in Table 9, as well as the average ages of the parents for each year shown.

More than 6 p.c. of the legitimate children born each year are born to mothers under 20 years of age, in about one-third of the births the mother is under 25 years, and in almost two-thirds, under 30 years; in 47 p.c. of all births the father is under 30 years of age. On the other hand one-third of the illegitimate infants born are born to mothers under 20 years of age and an additional one-third to mothers under 25 years.

* Available from DBS annual report, *Vital Statistics*.

Table 9 illustrates the fact that the risk of having a stillborn child increases with the age of the mother. Although stillbirth rates for mothers of all ages have been declining in recent years, they continue to be almost three times as high among mothers of 40-44 years and almost four times as high among those over 45 years as for mothers under 30.

Order of Birth.—Table 10 shows the order of birth of all live-born infants in 1957 according to the age of the mother. As would be expected, 26,569, or three out of every four, of the 34,968 infants born to mothers under 20 years of age were first children, whereas almost six out of every ten of the children born to mothers of 20-24 years were second or later children. This is a reflection of the earlier marriages and heavy fertility of recent years.

Table 11 summarizes the pattern of family formation since 1931. The results of the immediate postwar 'baby boom' are obvious—57.9 p.c. of the infants born in 1947 were first or second children while 50.5 p.c. of the 1957 baby crop were third or later children.

Section 3.—Deaths*

Since 1931 the Canadian death rate has fluctuated between 10.3 and 8.2 per 1,000 of the population, the low point having prevailed from 1954 through 1957. Table 1, pp. 198-199, shows that this decline has been apparent in varying degrees in all provinces. The generally low rates in the Prairie Provinces are partly the result of their younger average population; the uniformly higher rate in British Columbia is mainly attributable to a high proportion of people in the older age groups.

Subsection 1.—General Mortality

Sex and Age Distribution of Deaths.—Despite reductions in infant mortality over the past 25 or 30 years, more deaths still occur in the first year of life than in any other single year. Of the 107,000 deaths occurring in 1926, 31,000 or almost 30 p.c. were of children under five years of age and three-quarters of those were of children under one year of age. Of the 136,579 deaths in 1957, 16,891 or about 12.5 p.c. were of children under five years of age and, of those, 14,517 or over 85 p.c. were under one year. Most of the reduction took place among children over the age of one month but there was a notable decrease in all childhood ages up to five years.

Tremendous reductions have taken place in the mortality pattern since the early 1920's, with the most important reductions in the childhood and early adult ages. In 1931 over 19 p.c. of all male deaths were of persons five to 45 years of age; in 1957 these accounted for less than 11 p.c. of total deaths. The reduction in mortality among females in this age group is equally remarkable, the proportion dropping from almost 22 p.c. to approximately 8 p.c. Death rates for males up to age 45 have been roughly halved during the past 25 years; those for females in the same ages have been reduced as much as three to four times.

These reductions in the mortality rates in early and middle years of life have had the effect of increasing the number of people in the older age groups and of raising the average age of the population as a whole. As a consequence, much larger proportions of deaths are now occurring at the older ages and have raised the average age at death. In 1931 the average age at death of males was 43.1 years and of females 44.8 years; by 1957 this had advanced to 58.1 and 60.8 respectively. These trends are indicated clearly in Table 12.

* For international comparisons, see Section 7, pp. 228-229.

Deaths in Urban Centres.—For convenient reference, Table 2 on pp. 200-202 shows the number of deaths in 1957 for urban centres of 10,000 population or over. Without a knowledge of the age composition of each centre it is difficult to compare rates for various centres. The migration of young people from rural areas to some urban centres and of older people to other centres creates a favourable situation for a low or high rate as the case may be. Despite differences in the age factor, some urban areas have very low death rates compared with other centres of the same size and with other areas in the same province.

Causes of Death.—Table 13 shows the deaths and death rates in Canada grouped according to the International Abbreviated List of 50 Causes. About 80 p.c. of the deaths are caused by diseases of the heart and arteries, cancer, accidents, diseases of early infancy, the respiratory diseases—tuberculosis, pneumonia and influenza—and nephritis.

MAJOR CAUSES OF DEATH

RATE PER
100,000 POPULATION

RATE PER
100,000 POPULATION

* INCLUDES: DISEASES OF HEART (INCL. RHEUMATIC FEVER) AND ARTERIES, INTRACRANIAL LESIONS, CHRONIC NEPHRITIS.

The rise in the average age at death has already been noted (p. 209). Causes of death that mainly affect children and young adults have declined. Diphtheria for example has been almost wiped out and tuberculosis has been greatly reduced. On the other hand the aging of the population increases the proportion of deaths from certain causes that affect older people. Thus, cancer and diseases of the cardiovascular renal systems now account for a substantially larger proportion of all deaths than formerly.

These trends indicate the remarkable success that has attended the attack by health authorities on the infective and contagious diseases which in the past have constituted such a great hazard in the early and young adult years of life. They have similarly served to emphasize the emergence of the chronic and degenerative conditions of later life as the targets towards which the public health programs of the future will be directed. In effect, Canada has shared the experience of most western nations in exchanging a high mortality in younger life for high morbidity in older age groups.

The Chart on p. 211 shows death rates for the major cause groups from 1931-57.

Subsection 2.—Infant Mortality

Table 1, pp.198-199, shows the striking improvement that has taken place in the rate of infant mortality during the past quarter-century. Although 56,734 of the 1,799,000 children born in the years 1954-57 died before reaching their first birthday, 110,570 others lived who *would have died* at the rate prevailing in the period 1926-30.

Table 14 shows that mortality among male infants is 25 to 30 p.c. higher than that among females for Canada as a whole, with wider variations for the individual provinces. As pointed out earlier, there are on the average 1,057 males born to every 1,000 females, but because male infant mortality is higher the excess of males is reduced drastically by the end of the first year. For example, in 1955-57 there were 700,152 male children born compared with 662,617 female children, an excess of 37,535 or 5.7 p.c.; during this period

24,388 male children died during their first year compared with 18,412 female children, that is, 5,976 more. The excess of males at one year of age was thus reduced to 31,559 or 4.8 p.c.

As indicated in Tables 1 and 14, infant mortality rates vary considerably from province to province and from one locality to another. One of the principal causes of these variations appears to be the different proportions of births that take place in hospital or under proper medical care (*see also* p. 204). Along with increased hospitalization has come better and more widespread prenatal and postnatal care. Many other factors have also been important, particularly the supervision of water supplies, improved sanitation, the pasteurization of milk, the use of antibiotics, more and better pædiatric services, improved obstetrical and hospital nursing services, improved home environment because of generally higher living standards and, in recent years, the lower age of mothers.

Infant Mortality in Urban Centres.—Because of the relatively small numbers of infant deaths in individual cities and towns, the rates for these centres usually vary widely from year to year. As is evident from Table 2, pp. 200-202, many cities and towns have maintained consistently low rates as compared with the national rate or the rate for the province in which they are situated.

Causes of Infant Deaths.—Of the 14,517 infant deaths in 1957 a congenital malformation was the underlying cause of death in 2,265 cases, immaturity in 2,435, pneumonia among infants over four weeks of age, 1,460, postnatal asphyxia and atelectasis 1,751, and injury at birth 1,478; these causes together made up almost 65 p.c. of the total. The Chart opposite shows the relative importance of the major causes of infant deaths from 1931-57, and the Chart on p. 214 shows the comparative numbers of children dying at each month of age during the first year of life.

¹ Excludes the Yukon and Northwest Territories.

² Less than one per 100,000 live births.

Subsection 3.—Maternal Mortality

As indicated in Table 1, pp. 198-199, the number of mothers who die in pregnancy and childbirth has been greatly reduced during the past two decades. Although the number of births has been much greater in recent years, the number of maternal deaths has declined steadily since about 1930 (when there were 1,215 deaths and a rate of almost five deaths for every 1,000 live births) to a record low of 255 in 1957. Since 1945 the rate of maternal mortality has dropped below two per 1,000 live births and has been under one per 1,000 live births since 1951. During the past three years alone the rate has dropped from 76 per 100,000 live births to 54. Mortality among unmarried mothers is higher than among married mothers.

LEADING CAUSES OF INFANT DEATHS

RATE PER 100,000
LIVE BIRTHS

RATE PER 100,000
LIVE BIRTHS

* DUE TO CHANGES IN CLASSIFICATION, NOT STRICTLY COMPARABLE OVER THE PERIOD; INCLUDES ALL DEATHS INVOLVING IMMATURITY EITHER AS THE UNDERLYING CAUSE OR AS A COMPLICATION.

** INCLUDES CATEGORIES 774-776, INTERNATIONAL STATISTICAL CLASSIFICATION (6th. Rev.) WHERE IMMATURITY REPORTED ALONE AS UNDERLYING CAUSE.

Age at Death.—Table 16 shows the distribution of maternal deaths by age groups and average age at death. The latter is about four years higher than the average age of all mothers at the time of childbirth. The rates per 1,000 live births by age groups show that age is a most important factor in maternal mortality. Until very recent years the risk of mortality at childbirth was directly related to the age of the mother; in other words for all mothers of over 20 years the rate rose with increasing age. Though rates for all age groups of mothers have been declining, recently there have been rather significant changes in the rates. Whereas formerly the death rates for mothers in the age group 30-34 was twice or three times as high as the rate for the 20-24 group, in 1957 the pattern changed; in that year the mortality rates for the four age groups of mothers under 35 were quite uniform, but rose sharply with age for those over 35.

² Excludes Newfoundland only.

Causes of Maternal Deaths.—Table 17 shows the main causes of maternal deaths during the years 1955-57. Until a decade or so ago, sepsis and toxæmia were by far the most important causes of death of mothers at childbirth. The danger of death from sepsis and other infection has been drastically reduced over the past 15 to 20 years through the use of antibiotics and probably also through increased use of medical services. Toxæmia however, is still the major fatal complication of pregnancy and is second only to complications arising during delivery. Hæmorrhage during pregnancy or delivery, which has been another important cause of mortality among mothers, has also shown some reduction in recent years.

17.—Maternal Mortality and Rates per 100,000 Live Births, by Cause, 1955-57

² Less than one per 100,000 live births.

Section 4.—Natural Increase*

The rate of natural increase in Canada (excess of births over deaths) prior to 1930 was 13 or more per 1,000 population. Partly as a result of the depression, the birth rate declined more than the death rate and the rate of natural increase fell to 9.7 in 1937. Higher birth rates during and after World War II and a gradually declining death rate caused the natural increase rate to rise steadily from 10.9 in 1939 to a record 20.3 in 1954. It dropped slightly in 1955 and 1956 to 19.8 but, with an increase in the birth rate and a stationary death rate, it rose to 20.1 in 1957.

* For international comparisons, see Section 7, pp. 228-229.

BIRTH, DEATH AND NATURAL INCREASE RATES

RATE PER 1000
POPULATION

RATE PER 1000
POPULATION

Table 18 shows the rates of natural increase in the provinces and for each sex separately. The high rates in the Prairie Provinces are partly accounted for by their relatively younger populations and consequent low death rates. In Quebec the death rate in the period 1926-30 was high but it has since declined steadily. High birth rates and in Quebec the declining death rates have given Newfoundland, Alberta, Quebec and New Brunswick the highest rates of natural increase in Canada in recent years (excluding the Yukon and Northwest Territories).

The rates of natural increase are higher for females than for males in all provinces because of the higher death rates for males. In the western provinces particularly, the ratio of males to females in the total population is higher than in other parts of Canada and this tends to lower the rate of natural increase. In Canada, a country with a fairly young population and where immigration has been on a large scale, an excess of males is to be expected but the higher rate of natural increase for females may gradually reduce this excess. The trend is towards an eventual excess of females in the total population—as there now is in most European countries—unless immigration again raises the male ratio or death rates among males are drastically reduced.

Natural Increase in Urban Centres.—The classification of births and deaths by place of residence makes it possible to compile the natural increase in the population of urban centres; the figures are presented in Table 2, pp. 200-202.

Section 5.—Marriages and Divorces*

Subsection 1.—Marriages

Table 19 shows the number of marriages and the marriage rates per 1,000 population in Canada and the provinces, and percentages of brides and bridegrooms, according to place of birth. For the country as a whole, 81 p.c. of the grooms of 1957 were born in Canada—66 p.c. in the province in which they were married; over 85 p.c. of the brides were born in Canada—73 p.c. in the province in which they were married. However, as would be expected because of heavy immigration of young persons since the beginning of World War II, an increasing number of marriages are of persons born outside the country. For example, 11.7 p.c. of the grooms married in 1941 were born outside Canada; in 1957 the proportion was 18.7. Among the brides the percentage rose from 8.4 to 14.9. However there are wide variations from this pattern as between provinces; in the older Atlantic Provinces and Quebec there is a greater tendency than in the other provinces to marry native Canadians. In these areas both partners in a marriage are often born in the same province.

* For international comparisons, see Section 7, pp. 228-229.

¹ Newfoundland included from 1951 and the Yukon and Northwest Territories for 1956 and 1957.

Age and Marital Status of Bridegrooms and Brides.—Table 20 shows that almost 92 p.c. of the marriages in 1957 were between persons who had not been married previously; about 4.5 p.c. of both brides and bridegrooms had been widowed, and almost 4 p.c. of the marriages were of divorced persons. The average age at marriage of bachelors was just over 26 and that of spinsters 23 years and four months. The average age of widowers and widows at the time of remarriage was slightly more than double that of bachelors and spinsters. Over 91 p.c. of spinsters married in 1957 were under 30 years of age, 32 p.c. were under 20 years and 45 p.c. were between 20 and 25. Over 83 p.c. of bachelors were under 30 years of age, 6.5 p.c. of them under 20 and 48 p.c. from 20 to 24 years of age.

In recent years, couples are marrying younger than they did a generation ago. Since 1940 the average age of men at the time of their first marriage has dropped from 28 years to just past their 26th birthday; that of girls from 24 years and eight months to 23 years and four months.

Religious Denominations of Brides and Bridegrooms.—The distribution of brides and bridegrooms by religious denominations is roughly the same as that for the population as a whole. Table 21 shows the very strong influence that religion has on marriage. About 72 p.c. of all marriages are between persons of the same religious denomination; in 1957 among those of Jewish faith it was about 93 p.c.; among Roman Catholics 88 p.c.; United Church about 62 p.c.; and Eastern Orthodox about 63 p.c.

Subsection 2.—Dissolutions of Marriage (Divorces)

Before World War I the number of divorces granted in Canada was very small. There were fewer than 20 divorces each year from Confederation to 1900, 21 in 1903, 51 in 1909 and 60 in 1913. These numbers represent less than one per 1,000 of the yearly number of marriages. At the end of World War I the number of divorces showed a steady increase, advancing to a peak of 8,199 in 1947, then declining gradually to a postwar low of 5,270 in 1951. From 1952 to 1957 the number has fluctuated between 5,600 and 6,673.

22.—Dissolutions of Marriage (Divorces), by Province, 1916-57

NOTE.—Figures for the years 1900-50 are given in the 1956 Year Book, p. 230.

Section 6.—Canadian Life Tables

Four official series of life tables for Canada and the provinces and regions have been published to date, based on deaths in the three-year period around each of the Censuses of 1931, 1941, 1951 and 1956. In addition, tables have been computed for Canada as a whole for the years 1945 and 1947 based on estimated populations by sex and age and the deaths recorded in those years. The life table values for 1956 are given in abbreviated form in Table 23.

Life tables give a summary of the health and general conditions of survival of the population in a conventional, standard form. A hypothetical number (100,000) of births of each sex is assumed as a starting point. The life tables show how, on the basis of the mortality rates at each age in the given years, these 100,000 of each sex are reduced in number by death. For example, during the year 1956, of 100,000 males born, 3,472 died in their first year so that 96,528 survived to one year of age; 241 died in their second year so that 96,287 survived to two years of age, and so on. At 100 years of age only 87 of the original 100,000 would have survived. The probability of death at each age is the ratio between the number of deaths and the population at each age. Finally, the expectation of life is the average number of years which a person might expect to live if the mortality rates in the given years remained constant.

Mortality rates at all ages for males have been almost consistently higher than for females. Males have the highest risk of mortality as compared with females during their first year of life, from their late 'teens to early 30's and from age 50 to 65. For both boys and girls the risk of mortality drops rapidly during childhood and is lowest at about age 10, increases gradually to about age 40 for males and about 50 for females and then rises steeply with advancing age. At the mortality rates given in the 1956 Life Table (see Table 23) about 13,000 males would have died before reaching age 50 as compared with about 8,700 females; only 56,466 of the original group of 100,000 males would have survived to age 70 as compared with about 70,327 females.

By 1956 life expectancy at birth in Canada had reached a new high record of 67.6 years for males and 72.9 for females—comparable to the expectancy for other countries of the world with highly developed medical and public health care. Once a child has passed its first year of life however its life expectancy increases appreciably. At one year of age a male child at present mortality risks may, on the average, expect to live an additional 69.0 years and a female 74.0 years, representing for an infant boy a gain of 1.4 years more than his expectation at birth and 1.1 more years for an infant girl. The expectation of life of a 15-year-old boy is 55.9 more years; of a 15-year-old girl 60.6 years. At 25 years of age the expectation is about 46.6 years for men and almost 51 for women and at age 70, 10.5 years for men and 12.2 for women.

Table 24 summarizes the life expectancy figures extracted from the Canadian Life Tables for 1931, 1941, 1951 and 1956. Life expectancy at birth increased for men from 60 in 1931 to over 67.6 years in 1956 and from 62 to 72.9 years for women during the same period. This is a gain for males of 1.3 years since 1951 compared with gains of 3 and 3.3 years in the previous decades; females gained 2.1 years since 1951 compared with 4.2 and 4.5 years in the preceding decades. Thus, since 1931 a total of 7.6 years have been added to male life expectancy and female longevity has been lengthened by 10.8 years.

The increases in life expectancy have been predominantly at the younger ages, particularly in infancy, and diminish with advanced age. For example, since 1931, 3.2 years have been added to the life expectancy of a five-year-old male, 2.1 years to a 20-year-old, over 8 months to a 40-year-old and just over two months to a 60-year-old as compared with 7.6 years for a newborn male. During this period life expectancy for a five-year-old female gained 7.2 years; for a 20-year-old 6.0 years, 3.7 years for a 40-year-old and 2.1 years for a 60-year-old as compared with 10.8 years for a newborn female.

Longevity has improved for both sexes, though more so and at all ages for females, but there has been only slight improvement for males beyond middle life. Briefly the rapid decline in the death rate for infants of both sexes is continuing, with slower declines with advancing age, so that relatively stationary death rates have been established from about 50 years onwards for males and up to about 80 for females.

The fact that such a pattern exists is important in interpreting the results of these life tables. The arbitrary population base of 100,000 of each sex in the tables has been subjected to the mortality rates in effect in 1955-57, and the life expectancy computed as if those death rates at each age were to prevail during their lifetime. Actually the theoretical 200,000 infants born in 1955-57 will most probably have a pattern of survival and life expectancy quite different from that of the present life table as they will spend most of their lives under conditions of public health and medical care which in all likelihood will be superior to those prevailing in 1955-57.

The improvement in life expectancy, particularly among children and adolescents is due mainly to the substantial reduction in recent years of mortality from infectious diseases; on the other hand diseases associated with middle and old age are much less amenable to control. It is therefore unlikely that improvement in life expectancy in the future will be comparable to that of the past quarter-century. As approximately 11 p.c. of deaths in 1955-57 occurred among infants and an additional 75 p.c. among persons over age 50, any additional improvement must come as the result of further declines in mortality from conditions associated with childbirth and early infancy, further control of infectious diseases, prevention of accidents, and advances in combating diseases associated with middle and old age, such as cardiovascular renal conditions and cancer.

Section 7.—International Comparisons of Vital Statistics

Table 25 gives a summary of Canada's national and provincial vital statistics rates along with those of several other countries. It will be noted that among the countries listed the low crude death rate in Canada is bettered by only one country, the Netherlands, and that some of the provinces have lower rates than most other countries. The birth rate also helps to make Canada one of the fastest growing countries and this country currently ranks sixth among those listed. However there is marked room for improvement in rates of infant mortality; although Canada had the eighth lowest rate among the countries listed, 13 countries had equal or lower rates.

25.—Principal Vital Statistics Rates of Selected Countries 1957

NOTE.—Countries are ranked according to the highest rates for births, marriages and natural increase and according to the lowest for deaths.

PART I.—PUBLIC HEALTH

Section 1.—Review of Health in Canada

During the past ten years there has been an unprecedented growth in Canada's population and in the health and welfare services and resources that protect it. The number of people in Canada has increased by 4,000,000 during this period, of whom less than 1,000,000 were immigrants. The expansion of both health and welfare services has been equally outstanding. Better medical and hospital care, expansion of environmental preventive services, better housing, more and better food, greater security for the older person, for the disabled and for vulnerable groups such as deserted mothers, have all contributed to better health.

The crude death rate and maternal, infant and neonatal rates have decreased more in this period than in any other in history. Death rates for some younger groups have dropped by more than two-thirds during the past quarter-century. While, in the older

* Except where otherwise indicated, this Chapter was prepared by the Research and Statistics Division of the Department of National Health and Welfare.

ages, the more significant reduction in mortality rates has been among women, there have been decreases in death rates for specific diseases among both sexes. A record of 469,093 births in 1957 maintained the postwar high fertility rates but the infant mortality rate of 31 still stands far above the lowest current records of countries like Sweden and the Netherlands (both 17). Nearly two-thirds of the deaths among children occur in the first month of life, a reflection of the high death rate from immaturity, birth injury and congenital malformations. Satisfactory trends in maternal death rates continued in 1957, the maternal mortality rate of 0.5 per 1,000 live births being at a level comparable with other leading countries.

Environmental health services have greatly reduced the incidence of such water- and food-borne infections as typhoid fever. Vaccination has eliminated smallpox of which there were over 3,000 cases as recently as 1928. The extensive development of antibiotics and other prophylactic agents such as poliomyelitis vaccine has reduced the severity of or the degree of disability caused by many primary infections and has provided protection against secondary infection. In 1956 only 1.8 p.c. of all deaths were due to infectious diseases, including tuberculosis; thirty years ago infectious diseases accounted for 12.6 p.c. of deaths. A similar decrease has occurred in other diseases such as rheumatic fever and pneumonia where infection plays a part in the disease processes. The introduction of ataractic drugs in treatment of mental illness has assisted in expediting the clinical control and rehabilitation of mental patients.

But, while many of man's oldest diseases are being controlled, the nature and cure of chronic and degenerative illness remain too largely unknown, and new sources of ill health are emerging from the complex development of industrial civilization. Occupational hazards from toxic substances and accidents have become a matter of increasing concern. The contamination of air and water from industrial wastes becomes a progressively more severe problem. Accidents are assuming an alarming position among the leading causes of death; vehicular and other traffic accidents result in a tragic mounting loss of life. The rapid development of urban living has also created many other problems related to health. Inadequate housing and recreation facilities, excessive use of alcohol and drug addiction are predominantly special urban problems. Increasing use of radioactive agents in many different fields of endeavour requires special health precautions and the general problem of the effects of radiation on life is one of the most important and pressing of today.

Health of Young People.—Following the first year of life, survival rates are high throughout childhood. Although more than one-third of the population are between one and 20 years of age, they account for only one of every 25 deaths. Accidents account for the largest number of deaths in childhood, principally traffic casualties and drownings. Respiratory and digestive disorders are also leading causes of death.

Despite the relatively low death rate, sickness rates in childhood remain high. The Canadian Sickness Survey of 1951 showed that 87 p.c. of the children under 15 years of age reported sickness and 57 p.c. reported some time spent sick in bed. Each child suffered an average of three sicknesses a year. Sicknesses lasted 12 days on the average. Colds and influenza, which are rife at all ages, were leading causes of sickness among children. The communicable diseases of childhood (measles, mumps, chickenpox, whooping cough and scarlet fever) also accounted for much sickness; well over 1,000,000 cases of these diseases were reported during the survey year. In March 1957 there were nearly 5,000 persons suffering from long-term conditions, generally congenital or arising in early childhood, such as epilepsy, cerebral spastic infantile paralysis or the late effects of infantile paralysis. Over 10,000 mentally defective persons received allowances for total and permanent disabilities, in addition to those being cared for in institutions.

Health of Adults.—The health of the adult population has also been affected by modern preventive and treatment services, and control of many infectious respiratory and digestive diseases has markedly reduced death rates from these causes. Degenerative diseases, however, continue to take an increasing toll of life and health through the working years.

Thirty years ago women experienced, through their reproductive years, a higher death rate than men. The situation is now reversed; women's death rates have been reduced by two-thirds as compared with one-half among men. Accidents, frequently occupational, are the leading cause of death for men; past the age of 30, cancer becomes the leading cause of death for women. From age 50 on there are marked trend differences in death rates between the sexes. While the rates for women in their 50's and 60's have dropped by about one-third, there has been, over the past quarter-century, no significant decrease in the male death rate; in 1955 there were seven deaths among men for every four among women in this age range. Half the deaths of both sexes are caused by heart disease. One-third of female deaths and one-fifth of male deaths result from cancer. Diabetes also ranks as a leading cause of death for both sexes.

The Permanent Physical Disability Study carried out as a supplement to the Canadian Sickness Survey in 1951 indicated that 317,000 persons aged 45 to 64 were permanently physically handicapped; of this number 136,000 were severely or totally disabled. Death from a degenerative disease in adult age is often preceded by a period of illness and disability.

Health of Older People.—The growing burden of chronic illness in old age is reflected in mortality and morbidity data. In 1955, 63 p.c. of deaths over age 65 were caused by heart and artery diseases and 15.6 p.c. were the result of cancer. Cardiovascular disease and cancer account for approximately one-third of all old age admissions to general hospitals and a large share of hospital care in old age is for respiratory and digestive ailments. The chronic nature of sickness in old age is emphasized by the findings of the Canadian Sickness Survey. Persons over age 65 accounted for only 7 p.c. of the survey population but for 15 p.c. of the total days of illness. That much disability was permanent was indicated by the fact that 162,000 persons over age 65 were estimated to be severely or totally disabled. Heart disease, arthritis, impairments from accidents, blindness, deafness and chronic diseases of the nervous system accounted for 60 p.c. of all persons reporting permanent disability. The Canadian Sickness Survey did not include residents of chronic care institutions. In 1955 there were about 140,000 persons under care in mental, tuberculosis and other chronic care hospitals. Persons over 65 years of age accounted for one-quarter of all separations from mental institutions. One-quarter of discharges and two-thirds of deaths in mental institutions in old age were diagnosed as senile or suffering from cerebral arteriosclerosis.

Section 2.—Federal, Provincial and Local Health Activities

Provincial governments have the major responsibility for the organization and administration of public health services in Canada, and municipalities have supervision over certain matters delegated to them by provincial legislation. Most provinces are now developing programs of hospital insurance and diagnostic services under a federal-provincial program, and preventive and other supporting services are well established in most areas. The Federal Government, in addition to certain constitutional obligations, has an important function in assisting the provinces through advisory, consulting and co-ordinating services and in the provision of health grants. Voluntary agencies also have an important part in health matters at the national, provincial and local levels.

Subsection 1.—Federal Health Activities

The Department of National Health and Welfare is the chief federal agency in health matters, but important treatment programs are also administered by the Department of Veterans Affairs and the Department of National Defence. The Dominion Bureau of Statistics is responsible for the compilation of health statistics, the National Research

Council and the Defence Research Board administer medical research programs, and the Department of Agriculture has certain health responsibilities connected with food production.

The Department of National Health and Welfare administers controls over food and drugs including narcotics, operates quarantine and immigration medical services, carries out international health obligations, and provides health services to Indians, Eskimos and other special groups. It serves in an advisory and co-ordinating capacity to the provinces and administers grants to provincial health and national voluntary agencies.

The Department advises on the visual eligibility of applicants for blindness allowances and co-operates with the provinces in the provision of surgical or remedial treatment for recipients of these allowances. Under the Public Works Health Act, supervision of health conditions is provided for persons employed on federal public works. Other programs of health or medical supervision and counselling are provided to the federal Civil Service and to the Department of Transport in all matters pertaining to the safety, health and comfort of air crew and passengers.

Co-ordination with the provinces on health matters is facilitated by the Dominion Council of Health. The membership of the Council includes the Deputy Minister of National Health who acts as chairman, the chief health officer of each province, and five appointees of the Governor in Council representing the universities, labour, agriculture and French- and English-speaking women's organizations. The Council meets semi-annually to review current problems. Its decisions or recommendations, though purely advisory, provide the federal and provincial governments with the opinions of a group of senior health administrators. Several federal-provincial technical advisory committees of the Council deal with specific aspects of public health.

National Health Grant Program.—The National Health Grant Program, inaugurated in 1948, initially made ten federal grants available to the provinces for the development and strengthening of public health and hospital services. Nine are continuing grants: the Hospital Construction, Professional Training, General Public Health, Public Health Research, Mental Health, Tuberculosis Control, Cancer Control, Venereal Disease Control, and Crippled Children Grants. The Health Survey Grant lapsed in 1953 following completion of provincial health surveys. In 1953, after a review of the first five years of the Program, three new grants were established: Child and Maternal Health, Medical Rehabilitation, and Laboratory and Radiological Services.

In 1958, federal assistance under the Hospital Construction Grant was increased to \$2,000 per hospital bed, regardless of type—double the previous grant for active treatment beds. In addition, funds were made available to meet one-third of the cost of approved alterations and renovations to existing facilities. The provinces must at least match federal contributions under the Grant. There is also matching requirement in the Cancer and Venereal Disease Grants and in the case of services (as distinct from equipment and training of personnel) in those for Medical Rehabilitation, and Laboratory and Radiological Services.

Up to Mar. 31, 1958, aid for construction was approved for 68,743 beds, 9,112 bassinets, 12,730 nurses' beds, and space in community health centres and combined laboratories exceeding 7,800 bed equivalents. Approximately 20,000 health workers had been trained or were undergoing special training, and 6,200 additional health workers had been employed with federal grant assistance.

Since the inception of the program, the provinces have steadily increased utilization of the grants. Payments to the provinces in 1957-58 totalled \$34,606,064 or 78 p.c. of the amount available; the average utilization during ten years of the program was 70 p.c.

1.—Amounts Available and Amounts and Percentages Expended under the National Health Program, by Grant, for the Ten-Year Period Ended Mar. 31, 1958, and for the Year Ended Mar. 31, 1958.

¹ Gross amounts that do not show reductions through refunds are estimated at about \$3,000,000. ² Expenditures may exceed 100 p.c. of amounts available, through transfer of unexpended funds from one grant to another.

Hospital Insurance and Diagnostic Services Act.—After several years of preparatory work, Parliament enacted the Hospital Insurance and Diagnostic Services Act in April 1957. This is enabling legislation under which federal grants-in-aid are made available to the provinces to assist in operating publicly administered insurance plans for general hospital care. The Act sets out the principles under which the Federal Government will bear a substantial part of the costs of hospital services provided by approved provincial plans. The method of financing and administering individual plans, as well as the type of services offered over and above the minimum stipulated in the Act, is entirely a provincial matter.

Under the financial formula, the Federal Government contributes one-half of the aggregate shareable costs of the hospital insurance plans. In the individual provinces, however, the federal share varies as a consequence of a formula designed to give a somewhat higher percentage of federal assistance to provinces with less financial strength; each participating province receives 25 p.c. of the national average per capita cost of hospital services plus 25 p.c. of its own provincial per capita cost multiplied by the population covered.

The Act also enumerates the basic range of services mandatory for any provincial scheme that is to receive federal support. Under its terms, each participating province is required to make specified benefits universally available to its population. These benefits must be available without any limit on the total days of care provided and include basic public ward care and other in-patient service normally associated with the operation of a hospital, together with certain diagnostic aids for in-patients and, on a permissive basis, for out-patients. Services may be provided in chronic as well as active treatment hospitals, but the legislation specifically excludes care in tuberculosis sanatoria, mental hospitals and institutions for custodial care. All capital costs and all debts (or interest on debts) incurred prior to the effective date of each federal-provincial agreement are also specifically excluded from shareable costs. Thus, the federal Act is not set up to restrict a province in its hospital insurance program, but to assist in the provision of an insurance system for basic general hospital services available under uniform terms and conditions to the entire provincial population. (Descriptions of provincial plans are given in Subsection 2 dealing with provincial services, p. 242.)

Food and Drug Control.—The Food and Drugs and Proprietary or Patent Medicine Acts govern the safety, purity and quality as well as the labelling and advertising of all foods, drugs (except narcotic drugs), therapeutic devices and cosmetics. Standards of safety and purity are maintained through constant and widespread inspection and laboratory research. In the central Food and Drugs laboratory, standards governing ingredients are formulated and methods of analysis developed. Special research is carried on to establish the safety of new products. Recently this has involved intensive study in the field of pesticides and in chemical additives used in foods. Several panels of experts advise on technical and medical problems.

Control of the import, export and distribution of narcotic drugs is administered under the Opium and Narcotic Drug Act, and includes regulation of domestic supply and suppression of illicit traffic. Enforcement of the law is carried out in collaboration with the Royal Canadian Mounted Police and other agencies.

Indian and Northern Health Services.—The Department of National Health and Welfare makes available public health, medical and hospital services to about 152,000 Indians and 11,000 Eskimos. The program relative to Indians is administered by the Directorate of Indian and Northern Health Services in conjunction with the Department of Citizenship and Immigration, and for Eskimos in collaboration with the Department of Northern Affairs and National Resources.

Services are provided directly to about 2,000 small scattered groups through a network of 18 hospitals, 41 nursing stations and about 66 other health centres staffed by full-time medical officers, dental surgeons and graduate nurses. In areas where departmental staff or facilities are not located, private practitioners and provincial or community health agencies care for these groups in return for fees for service, payment of per diem rates or other arrangements. Special emphasis is placed on tuberculosis control through health education, field X-ray surveys, BCG vaccination and early treatment in sanatoria.

Immigrants.—The Department of National Health and Welfare advises on the administration of sections of the Immigration Act dealing with health, and conducts in Canada and overseas the medical examination of applicants for immigration. It also provides necessary health care for immigrants who become ill en route to their destination or while awaiting employment. Further assistance in the provision of hospital and medical services is available to indigent immigrants during their first year in Canada either by the Federal Government or by the province with federal sharing of costs.

Sick Mariners and Lepers.—Under the authority of Part V of the Canada Shipping Act, the Department of National Health and Welfare provides medical and hospital care on a compulsory prepaid basis for crew members of all foreign-going ships arriving in Canada and for crews of coastal vessels in interprovincial trade. Crew members of Canadian fishing and government vessels may participate on an elective basis. In any one year, approximately 100,000 non-Canadian members of foreign-going ships are insured, together with about 20,000 Canadians, 16,000 of whom are employed on fishing vessels, 2,500 on government vessels and 1,500 in coastal shipping. Treatment is available for a period of up to one year for all conditions except prolonged mental illness. Under the Leprosy Act the Department maintains one unit for the treatment of leprosy at Tracadie, N.B.

Health Research.—The National Research Council, the Department of National Health and Welfare, the Defence Research Board and the Department of Veterans Affairs all administer grants-in-aid of medical, public health or socio-economic health research. The latter three also conduct intramural research. Federal funds amount to about 50 p.c. of over-all expenditure on medical research in Canada.

The Division of Medical Research of the National Research Council, set up in 1946, offers grants chiefly for fundamental studies in basic medical science; these total about \$750,000 annually.

The Department of National Health and Welfare supports both intramural and extramural research, chiefly of an applied nature, to an amount of about \$2,500,000 annually. Grant assistance comes mainly from the Public Health Research Grant, with additional amounts provided from the grants for mental health, cancer control, tuberculosis, general public health, crippled children, and child and maternal health. Departmental public health research is conducted in the laboratories of the Food and Drug Directorate, the Laboratory of Hygiene, the Occupational Health Division and the Nutrition Division, as well as by the Epidemiology and Dental Health Divisions. Socio-economic research in both the health and welfare fields is carried on by the Research and Statistics Division, which collects, analyses and evaluates data on health and welfare matters, develops methods to assist in solving technical and administrative problems, and provides research and consultant services to other Divisions of the Department and other agencies in Canada and abroad.

The Defence Research Board sponsors intramural research in its Defence Research Medical Laboratories together with grants-in-aid for investigations related to medical problems of national defence.

The Department of Veterans Affairs is committed mainly to clinical research in its own hospitals, with emphasis at the present time on the problems of the aging process. (See p. 291.)

The Health and Welfare Division of the Dominion Bureau of Statistics collects vital statistics, morbidity information and hospital data, and carries out surveys on health matters.

International Health.—Canada has been a signatory to certain international agreements and conventions and is a member of a number of international organizations concerned with health, including the World Health Organization.

To carry out this country's obligations under the International Sanitary Conventions, the Department of National Health and Welfare maintains quarantine measures for ships and aircraft entering Canadian ports and provides accommodation and necessary medical care for persons arriving in Canada who require quarantine. It also carries out Canada's obligations, under the Brussels Agreement of 1924, for the treatment of venereal disease in seafarers arriving in this country.

The Department is responsible for the enforcement of requirements governing the handling and shipping of shellfish under the International Shellfish Agreement between Canada and the United States and, at the request of the International Joint Commission, participates in studies connected with control of pollution of boundary waters between Canada and the United States and with problems caused by atmospheric pollution. Other international health responsibilities include the custody and distribution of biological, vitamin and hormone standards for the World Health Organization, certain duties in connection with the Commission on Narcotic Drugs of the United Nations and the provision of technical assistance to other specialized agencies of the United Nations carrying out programs related to health.

Subsection 2.—Provincial and Local Health Services

As already stated, the provincial governments carry the major responsibility for health planning and policy and most health programs are administered by provincial government agencies, though responsibility is often placed with local health authorities and other agencies that operate under provincial legislation and supervision.

Provincial and local health services may be grouped in several broad categories: general public health services, primarily of a preventive nature; services for specific diseases or disabilities combining prevention and treatment; services related to general medical and hospital care; and rehabilitation services for disabled persons.

General Public Health Services.—Provincial and local governments co-operate closely in providing community public health services. The autonomy of the provinces and their social, economic and geographic diversity make for some variety in legislative provisions, in financial arrangements, and in the detailed division of functions between provincial health departments and local and voluntary agencies. Each province, however, now offers all or nearly all of a basic range of public health services which include environmental sanitation, communicable disease control, child and maternal hygiene, health education, vital statistics, public health laboratories, occupational health, dental public health and nutrition services.

Environmental Sanitation.—The control of environmental hazards to health, one of the oldest forms of public health activity, is a function of specialized environmental sanitation or public health engineering divisions in each provincial health department. Programs are concerned primarily with the maintenance of safe water supplies, supervision of sewage disposal systems, milk sanitation and control of general sanitary conditions in public areas, the most extensive sanitary facilities being located, of course, in industrial and urban centres. Provincial and municipal sanitary engineers set standards, formulate policies and regulations, and provide technical assistance to local authorities. The intensity of this type of preventive supervision and control varies from province to province and within the province, but basic programs are similar.

Occupational Health.—Services designed to prevent accidents and occupational diseases and to maintain the health of employees are the common concern of provincial health departments, labour departments, workmen's compensation boards, and industry management. Provincial agencies regulate working conditions and offer consultation and educational services to industry. All provinces have on their statute books legislation (Factory Acts, Shop Acts, Mines Acts, Workmen's Compensation Acts) setting health safety standards for employers.

Communicable Disease Control.—The control of communicable disease has been intimately connected with the beginnings and development of public health measures and concepts. Separate divisions of epidemiology or communicable disease control exist in the six larger provinces; in the Atlantic Provinces these functions are handled by a provincial medical health officer. Local health authorities undertake case-finding and diagnostic services in co-operation with public health laboratories, carry out epidemiological investigations and often participate in tuberculosis and venereal disease control measures.

Maternal and Child Health.—Services for mothers and children are largely decentralized through local units and departments, but most provinces maintain separate divisions or employ consultants to promote better standards and to give technical assistance. Public health nurses have a prominent place in this work which may include prenatal education, provisions for delivery and care of the newborn in remote areas, home visits, child health clinics and school health services.

Nutrition.—Services include technical guidance, education, consultation and research. In some provinces school lunch programs are also sponsored and dietary supplements distributed. Five provinces have special nutrition divisions; elsewhere nutritionists serve in other divisions of the health department.

Health Education.—In most provinces experience has demonstrated the need for a professional full-time "health educator" as a member of the public health team. Nine provinces have separate divisions or units to co-ordinate the dissemination of health information through all available media.

Vital and Health Statistics.—All provinces have vital statistics legislation providing for the compulsory registration of births, marriages, deaths and stillbirths. Divisions of vital statistics are located in the health department in nine provinces; Ontario has its vital statistics office in the Department of Municipal Affairs.

Statistics pertaining to special health programs are maintained usually by the various operating divisions of the provincial health departments. Ontario and Saskatchewan, however, have separate research and statistics divisions which conduct special investigations.

Public Health Laboratories.—The public health laboratory, an essential facility in the protection of community health and the control of infectious diseases, was one of the earliest provincial services developed to assist local public health departments. Work performed includes bacteriological examination of water, milk and food samples, the examination of specimens for diagnosis of communicable diseases and pathological special services. Each province maintains a central public health laboratory and most provinces have established additional branch laboratories. Recent trends in some provinces include efforts to co-ordinate public health and hospital laboratory services, special measures to bring laboratory facilities to rural areas, and devices to reduce the direct cost of clinical laboratory procedures to the individual.

Special Health Programs.—Special programs have been developed to deal with health problems of particular severity, many of which are chronic or long-term in nature.

Mental Health.—Major developments in provincial mental health programs concern the expanding and modernizing of mental hospitals, the training of various kinds of psychiatric personnel and the extension of community mental health services outside mental hospitals. Assistance to patients in securing employment and in social adjustment following discharge from mental hospitals—a relatively new field of rehabilitation—is being promoted by voluntary groups and government agencies in several provinces.

At the end of 1957, Canada's mental hospitals, exclusive of psychiatric units, were treating more than 72,000 patients. Despite a growing rate of discharges, the daily average number of patients has continued to rise each year. Construction of new hospital accommodation continues and approximately 14,000 mental beds have been added since 1948. While there is still an acute shortage of mental hospital accommodation, there has been some reduction in overcrowding. The occupancy rate has declined from 128 patients for each 100 rated beds in 1948, to 117 patients in 1957, despite a 22-p.c. increase in the average daily population.

With the exception of the municipally owned local asylums in Nova Scotia and hospitals in Quebec that operate under religious or lay auspices, most mental hospitals are administered by provincial authorities. A great part of the cost is borne by the provincial governments, although patients whose relatives can afford to contribute may be charged for care in seven provinces. Newfoundland and Saskatchewan provide complete free care. In Ontario, mental hospital treatment is included in the plan of hospital care insurance which started operating on Jan. 1, 1959.

Most of the public mental hospitals provide care and treatment for all types of mental illness but, as facilities expand, it is becoming possible for hospitals to segregate patients under intensive treatment from those receiving long-term care. Some provinces maintain separate accommodation for certain categories of the mentally ill. For example, in British Columbia and Alberta, homes for the senile aged are an integral part of the mental hospital system. Ontario and Quebec have separate hospitals for epileptics. Eight provinces operate schools for residential treatment and education of mentally defective persons and one of the two remaining provinces, New Brunswick, enacted legislation in 1958 authorizing the government to support the maintenance of mentally retarded children in approved homes.

As the needs of patients are more fully understood and better methods of treatment develop, the daily routine of the mental patient is becoming less restrictive, as is shown in the increasing number of persons coming voluntarily for treatment. In 1956 these comprised 28 p.c. of first admissions to mental hospitals and 72 p.c. of admissions to the psychiatric hospitals or short-stay centres. A significant departure from the old system

of custodial care and locked doors has been the introduction of open wards where patients may have unrestricted access to grounds, occupational and recreational areas.

Persons engaged in the treatment of the mentally ill are the largest single group employed by provincial governments. Although an acute shortage of professional personnel still exists, an expanded program of training is now in operation with federal health grant assistance.

One of the greatest changes in the past decade has been in the extension of community mental health services outside mental hospitals. General hospitals have expanded their psychiatric services in both in-patient and out-patient departments. About 30 general hospitals have organized units where psychiatric treatment is provided by professional trained staffs. First admissions to these units in 1956 totalled about 8,500. Out-patient clinics where mental illness may be treated at an early stage and guidance services given to children and parents, and various community agencies also play an important part in the treatment of mental illness outside mental hospitals. Less than 20 mental health clinics existed in 1944, but there are now 145 community out-patient mental health services, consisting of 85 out-patient services in hospitals and 35 full-time and 25 part-time clinics. Operating agencies include provincial health departments, municipalities or health units, mental or psychiatric hospitals, general and allied special hospitals, school boards and voluntary organizations.

Day and night care centres, another departure from the traditional form of custodial care, developed first in Montreal a decade ago as part of the psychiatric service of two large general hospitals. Similar centres, admitting patients on a nine-to-five basis or in the evening after work have now been opened at St. John's in Newfoundland, at Toronto in Ontario and at Burnaby in British Columbia.

Tuberculosis.—Despite greatly reduced mortality from tuberculosis and evidence of some lowering in incidence, the number of cases discovered through provincial detection programs indicates that tuberculosis is still a major public health problem. Case-finding techniques include mass X-ray surveys, tuberculin tests, special surveys of groups vulnerable to tuberculosis, and routine X-ray examinations of all general hospital and out-patient admissions. The work of case-finding is supported substantially by voluntary campaigns conducted by the Canadian Tuberculosis Association.

Sanatoria treatment is free in Newfoundland, Nova Scotia, New Brunswick, Manitoba, Saskatchewan and Alberta, and is included in the hospital insurance benefits which came into effect in Ontario on Jan. 1, 1959. Even in those provinces where a charge for sanatoria care may be made, the amount collected from paying patients is a very small percentage of total costs.

The number of beds set up in sanatoria and in tuberculosis units of general hospitals declined from a peak of 18,977 reached in 1953 to 15,958 in 1957. This decline in occupancy has resulted from such factors as a decrease in the number of admissions, detection of cases in earlier stages of the disease, and improved treatment methods by drugs and surgery. Provision has been made in several provinces to furnish drugs to patients for home treatment.

Cancer.—Health departments and lay and professional groups working for the control of cancer have been concerned mainly with four aspects of the problem—diagnosis, treatment, research and public education.

In the detection and treatment of cancer, specialized medicine, hospital services and an expanding public health program are closely related. Programs operating under health departments exist in four provinces and there are an equal number with provincially supported cancer agencies or commissions. These sponsor the work of diagnosis and treatment in special clinics located usually within the larger general hospitals. The scope of services available without charge varies. Those of the Saskatchewan Cancer Commission and the Alberta Department of Health include all clinical and laboratory examinations

and testing, radiotherapy and surgery. Health departments in New Brunswick offer free diagnosis and radiotherapy and in Prince Edward Island, diagnostic services. Treatment programs of the Ontario Cancer Treatment and Research Foundation the British Columbia Cancer Foundation and the Nova Scotia Department of Health supply radiotherapy free or at nominal cost to medical indigents. The Manitoba Treatment and Research Foundation recently added free radiotherapy to a program previously organized on a means-test basis.

Laboratory research in many aspects of medical and biological sciences related to cancer is carried on by a grant-in-aid program administered by the National Cancer Institute but financed by the Canadian Cancer Society and federal-provincial grants. Clinical research projects are supported directly by the Canadian Cancer Society and provincial cancer agencies, particularly the Ontario Cancer Treatment and Research Foundation.

Until very recently there have been few research units operating primarily for cancer research. The year 1958 marked the completion of the Ontario Institute of Radiotherapy at Toronto, the first hospital and research centre designed exclusively for cancer patients. Another development was the establishment of a large cancer research unit within the new Medical Research Centre of the University of Saskatchewan, directed by a full-time professor of cancer research.

Poliomyelitis.—Through agreements with the Federal Government all provincial health departments have made Salk vaccine available for free inoculation of children; and are encouraging older age groups to avail themselves of the protection of this vaccine. The incidence of poliomyelitis in the four years since the introduction of Salk vaccine* has been at as low a level or lower than that between epidemics in previous years. Few persons who have received the prescribed number of shots have contracted the disease.

Most of the special programs offering free hospital care to poliomyelitis patients have become integrated in provincial hospital insurance schemes. Rehabilitation programs for ex-patients are a combined responsibility of provincial rehabilitation agencies and national voluntary agencies.

Dental Health.—Nine provincial health departments have dental health divisions, and a tenth is under organization. These divisions administer dental programs which vary under local conditions but are directed almost entirely to the care of children. Public education, training of dentists in dental public health, the operation of children's preventive treatment clinics and water fluoridation are all being undertaken, although not on the same pattern, in all provinces. Provincial legislation authorizing municipalities to pass by-laws and carry out approved programs pertaining to water fluoridation has been passed in British Columbia, Alberta, Saskatchewan and Manitoba.

In four provinces free clinical care is provided for children in remote or rural areas by the use of mobile units. In other provinces, community programs are in the course of development. A successful locally sponsored plan in which the cost of clinics is shared with the health authorities has been adopted in some 60 communities in British Columbia; the sponsoring group determines whether registration for treatment may be free or on payment of a nominal sum.

Venereal Disease.—Free diagnostic and treatment services are available in all provinces but government clinics are being increasingly superseded by private physicians who are supplied with free drugs and reimbursed for treatment of indigents on a fee-for-services basis.

Alcoholism.—Ontario, Manitoba, Alberta and British Columbia have recently set up alcoholism agencies supported largely by public funds. These agencies carry out research and education programs and operate centres for treatment. Saskatchewan and Newfoundland conduct an educational program. Ontario, Saskatchewan and Alberta also have rehabilitation programs for alcoholic inmates of reform institutions.

* A description of the research, discovery and Canada's part in the preparation of the vaccine is given in the 1956 Year Book, pp. 258-260.

Other Diseases or Disabilities.—Services for a number of chronic disabilities, such as heart disease, arthritis, diabetes, visual and auditory impairments, paraplegia and cerebral palsy, are being developed largely by voluntary agencies, assisted by federal and provincial funds.

Rehabilitation Services.—There has been a steady expansion in all provinces of specialized medical, vocational, employment and educational services to aid in the rehabilitation of the disabled to their maximum physical, social and economic independence. To bring together the activities of the various organizations providing a rehabilitation service, co-ordinating bodies have been formed at community, provincial and federal levels.

To support provincial rehabilitation programs the federal Department of Labour provides two matching grants—one to assist in the co-ordination and development of vocational rehabilitation, authorized under the federal-provincial co-ordination agreements, and a second specifically for vocational training under Schedule R of the Vocational Training Agreement. The Department of National Health and Welfare under the National Health Program provides grants to the provinces for medical rehabilitation of disabled persons, including the tuberculous, the mentally ill, and crippled children and adults. In 1957-58, the provinces utilized \$633,000 from the Medical Rehabilitation Grant to provide special equipment and expand services in hospitals and rehabilitation centres, and to train needed personnel such as doctors and physiotherapists. The Department of Veterans Affairs operates special centres for the treatment of various chronic conditions and assessment and rehabilitation units for geriatric patients. New rehabilitation programs have been established by the Indian Affairs Branch of the Department of Citizenship and Immigration for socially and physically handicapped Indians, and by the Department of Northern Affairs and National Resources for Eskimos who require re-establishment. The Special Placements Division of the National Employment Services also provides a job placement service for the handicapped.

Provincial vocational rehabilitation programs have been organized to make available medical, social and vocational services to persons handicapped by mental or physical disability. In each province specialized medical rehabilitation facilities have been set up in general hospitals and, in most of the provinces, rehabilitation centres offer integrated services. Four of these centres are operated by provincial Workmen's Compensation Boards which have experimented in methods of physical and vocational rehabilitation. All provinces make some provision for the education of handicapped children such as the blind, deaf, the mentally retarded, and frequently the physically handicapped in general, either through the operation of special schools or by financial grants.

Provincial and local branches of voluntary agencies, supported by service clubs and in some instances, community funds, provide important treatment and rehabilitation as well as preventive services. Such organizations include the Canadian National Institute for the Blind, the Canadian Arthritis and Rheumatism Society, the Canadian Foundation for Poliomyelitis and the crippled children's societies. Although the last-named still provide most of the services for orthopaedically handicapped children, together with children's hospitals and clinics, four provinces are developing their own programs. In most provinces voluntary agencies also operate sheltered or industrial-type workshops for the handicapped, some of which offer facilities for vocational testing and training.

Hospital and Medical Care.—*Hospital Care.*—The four provinces with hospital insurance plans in operation prior to the passing of the federal Hospital Insurance and Diagnostic Services Act of 1957—Newfoundland, Saskatchewan, Alberta and British Columbia—amended their programs to bring them into conformity with the federal Act from July 1, 1958. A fifth province, Manitoba, commenced its plan on the same date and Nova Scotia and Ontario on Jan. 1, 1959.

All seven plans, in conformity with the federal Act, provide in-patient services in active treatment and chronic and convalescent hospitals to all residents of the province under uniform conditions. Services include standard ward accommodation and nursing, necessary laboratory, diagnostic and radiological procedures, use of operating room and anaesthetics,

specified drugs while in hospital and other specified ancillary services. The federal Act provides for out-patient services but not on a mandatory basis. Newfoundland includes all services detailed in the Act. Alberta does not provide out-patient services. The remaining provinces provide them in case of emergency only, with some addition planned for Nova Scotia. Ontario, alone among the provinces, provides tuberculosis and mental health care, not provided for in the federal Act.

Reciprocal agreements between provinces for periods up to three months provide for continuous coverage for persons moving between provinces where plans are in force. Insured persons temporarily absent from a province are covered for care in the case of emergency illness or accident.

Different methods of financing the provincial share of costs have been employed. British Columbia has retained the previously existing system of financing from consolidated revenue, with appropriation from a sales tax, plus \$1 a day co-insurance. Alberta supplements appropriations from revenue with a three-mill assessment of municipalities and co-insurance graded from \$1 to \$2 (according to size of hospital) a patient-day. Saskatchewan, Manitoba and Ontario employ a premium system and Nova Scotia a sales tax. Newfoundland provides free care to all who cannot pay. Alberta, Saskatchewan, Manitoba and Ontario give free care to recipients of social assistance, but local relief cases remain the responsibility of the municipality in Saskatchewan, Manitoba and Ontario. In British Columbia, the province assumes the \$1 co-insurance charge for public assistance recipients.

Of the provinces without hospital insurance plans, Quebec provides hospital care for indigent cases under the Public Charity Act, per diem rates being shared by the province and the institution providing care; Prince Edward Island provides care to indigents at local discretion; New Brunswick, which is actively planning for the introduction of hospital insurance, provides grants to aid municipalities meet costs of hospital care for indigents.

Public Medical Care.—Public medical care programs exist in three provinces, but are limited to residents of particular sections. Nearly one-half of Newfoundland's population receives medical care on a premium basis at home or in hospital under the provincially administered Cottage Hospital Plan. In addition, all Newfoundland children up to the age of 16 are entitled to free surgical and medical care in hospital at provincial expense. All medical indigents also receive care at provincial expense in Newfoundland. In Manitoba and Saskatchewan locally operated municipal doctor programs cover about 30,000 and 167,000 persons respectively. The Swift Current Health Region in Saskatchewan operates a comprehensive prepaid medical-dental care scheme. All these services are subsidized to some extent by the provincial health departments.

Nova Scotia, Ontario, Saskatchewan, Alberta and British Columbia all operate special health service plans for certain of their public assistance groups. Indigent persons not covered by the plans in these provinces as well as indigents in other provinces may receive necessary care from their municipality of residence. In general, where costs are assumed by the municipality, a cost-sharing arrangement is undertaken with the provincial government.

In Nova Scotia and Ontario, physician's care in the home and office is the major benefit offered, while in Saskatchewan, Alberta and British Columbia physician's care in home, office and hospital, specified drugs, dental and optical care are supplied. All these plans are completely provincially financed except in British Columbia where services other than medical are shared on a 90/10 basis with the municipality on a proportionate population basis, and in Ontario where premiums for the Unemployment Relief Group are shared on a 60/40 basis with the municipality of residence.

Subsection 3.—Health Services in the Yukon and Northwest Territories

Health services in the two Territories are operated under conditions considerably different from those in the provinces. Vast, sparsely settled areas, climatic conditions, lack of municipal government and direct federal administration constitute a basic set of

conditions under which both the aboriginal and the white population of the two Territories receive their health services from government agencies or religious organizations and only in some settled areas from private medical practitioners.

Comprehensive health services for the Indian and Eskimo population are provided by the Directorate of Indian Health Services of the Department of National Health and Welfare, for the white population by the Yukon and the Northwest Territories governments and by the federal Department of Northern Affairs and National Resources. Health care for the Armed Forces is the responsibility of the Department of National Defence.

In Yukon Territory, services for the white population are administered through the Commissioner for the Yukon and include complete treatment for tuberculosis and poliomyelitis patients and hospital care for indigent residents. Grants are made to cover the operating deficits of the two general hospitals operated by the Territory. Public health services include communicable disease control, public health nursing, sanitary inspection and tuberculosis case-finding.

In the Northwest Territories, health programs for the white population include free treatment for tuberculosis patients, free hospital care for the mentally ill, free treatment for venereal disease cases, and free cancer diagnosis at the Edmonton Clinic, Alta. Indigent residents are eligible for complete medical, dental and optical services as well as for general hospital care. Free dental services are available to children under 17 years of age. To support the mission hospitals, the Territorial government pays per diem grants on behalf of all paying patients. Public health services are generally provided by Indian Health Service personnel.

Section 3.—Health Statistics

Statistical information on the health of Canadians is at present limited to the well established and highly standardized mortality, communicable disease and institutional statistics series, all of which have been available for a long period. As compared with these records, other national health statistics are still in an early development stage. So far the only source of information on general illness, health services and personal expenditure for health care is the Canadian Sickness Survey of 1950-51. Other projects deal with specific health problems or selected groups of the population and much of the statistical information is available from provincial and other health sources.

Statistics on causes of death are given in the Chapter on Vital Statistics, pp. 197-229; those on hospital statistics in Subsection 1 following; and those on notifiable diseases in Subsection 3. Analyses available from the Canadian Sickness Survey appear in the 1955, 1956 and 1957-58 Year Books.

Subsection 1.—Health Institutions*

On July 1, 1958, the Hospital Insurance and Diagnostic Services Act came into effect, making federal funds available to provinces wishing to participate in a federal-provincial hospital insurance scheme. Seven provinces have signed agreements of participation, and in 1959 eight are expected to have their insurance programs in operation. Among other anticipated benefits, the network of hospital care plans should enable hospitals to place their finances on a more stable basis and should increase their effectiveness in providing basic health services. The insurance scheme may, in fact, stimulate the demand for hospital care by the public, and this in turn could lead to the over-utilization of available resources. No hospital can operate at maximum efficiency with 100 p.c. of its standard

* Prepared in the Institutions Section of the Health and Welfare Division, Dominion Bureau of Statistics. Detailed information will be found in the following DBS publications: *Hospital Statistics 1956 and 1957*, Vols. I and II; *Mental Health Statistics 1957* and *Financial Supplement*; *Tuberculosis Statistics 1957* and *Financial Supplement*.

capacity fully occupied. The optimum occupancy rate is generally considered to be 80-90 p.c. of capacity. The addition of, say, 100 beds to a hospital's complement would not provide an additional 36,500 days of care per annum, but rather about 29,200.

In 1957 there were 1,402 hospitals known to be in operation in Canada, and they had 176,347 beds (not including bassinets for the newborn). Of this total, 97 did not submit statistical reports. The remainder, 1,305 hospitals with 173,644 beds, provided at least partial returns and are included wherever possible in the tables of this Subsection. The bed capacity of non-reporting hospitals is estimated to be 1.5 p.c. of the total.

Two methods of hospital classification have been used in the tables. The first is based on admission policy—that is, public, private or federal; the second, on type of service provided—that is, general, special, mental or tuberculosis. Both bases of classification are combined in Table 2, and the figures distributed provincially. Public general hospitals, the most numerous single group, accounted in 1957 for over half the total number of hospitals reporting in each province except Quebec and British Columbia. The number of beds in such hospitals constituted a majority of the over-all capacity in Newfoundland, Prince Edward Island, Saskatchewan, Alberta and the Yukon and Northwest Territories, and were the largest single group in every province. As might be expected, the rank of the provinces in terms of population is the same as their rank in numbers of hospital beds, although not as their rank in numbers of hospitals. Saskatchewan, with its many small hospitals, though fifth in terms of population, is second to Ontario in the number of public general hospitals.

Public and Private Hospitals.—Table 3 indicates the substantial increases that occurred over the 1952-57 period in the amount of space available and the volume of care provided in public and private general and special hospitals. In 1957 there were 894 reporting hospitals, 117 more than in 1952; they had six beds for every five at the beginning of the 1952-57 period. They provided an in-patient bed at some time during 1957 for four out of each 25 Canadians, and gave on the average one and seven-tenths days of care during the year to every man, woman, child and infant in the country. The number of private hospitals reporting during those five years increased from 187 to 232, a higher rate of increase than for public hospitals. Similarly, there was a greater percentage increase in patient-days for private hospitals (49.7 p.c.) than for public institutions (26.9 p.c.).

Mental Institutions.—Four of every 1,000 Canadians were patients in the country's 106 mental institutions at the end of 1957. The number of patients was 65,768, a figure 661 above the 1956 year-end total and roughly double the 33,000 of 1932 when the hospital series were begun. Annual data from 1948 onward show continuous numerical advances, although in the three years 1955-57 the rate per 100,000 population declined slightly. The data on mental institutions, except for staff, include psychiatric units in other hospitals.

Since bed capacity stood at 57,193 at the end of 1957, a net overcrowding of 8,575 patients or 14.9 p.c. is indicated. A year before, this margin had been 7,093 or 12.2 p.c. The admission (first and re-admission) rate per 100,000 population was higher than ever during 1957, although the percentage increase between 1956 and 1957 was very small. Much of the increase in admissions during the past ten years is probably accounted for by the increase in the number of psychiatric units with small bed capacities and high patient turnover rates.

The ratio of staff to patients reached a new high in 1957. Mental hospitals at the end of 1957 had 23,095 full-time personnel—2,497 more than in 1956—representing 35.5 employees for every 100 patients. Psychiatric units are not included in these figures because of the difficulty of segregating their maintenance staffs; psychiatric units ordinarily utilize the services of their parent hospitals.

¹ Includes 1956 data for two hospitals that did not report later data.

² Includes 1956-57 data for seven hospitals that did not report later data.

Tuberculosis Sanatoria and Units.—The effects of the development of new therapeutic techniques were in evidence at the end of 1957. At that time the number of beds devoted to care of the tuberculous in Canada was only 15,958, a drop of 1,725 in three years. Table 8 indicates the provincial distribution of the bed complement and its location in various types of institution. Table 9 gives information on patients, personnel and facilities. Patient-days were down by 9.2 p.c. from 5,250,555 in 1956 to 4,766,306 in 1957, and personnel (in sanatoria only) dropped 2.8 p.c. from 9,739 to 9,464. Finances of public sanatoria are covered briefly in Table 10.

Federal Government Hospitals.—Under the terms of the British North America Act, health and welfare is the responsibility of the provinces. Nevertheless the Federal Government is responsible for the health of certain groups such as war veterans and members of the Armed Forces, newly arrived immigrants, Indians and Eskimos, and lepers. The federal hospitals are administered by three departments of government: in 1957 the Department of Veterans Affairs administered 15; the Department of National Defence 7; the Department of National Health and Welfare's Indian and Northern Health Services 17; and the Department of National Health and Welfare's Quarantine, Immigration Medical, and Sick Mariners' Services 9. Certain hospitals of the Department of National Defence, as well as hospitals that closed during the year, are not generally included in the figures of Table 11.

Subsection 2.—Canadian Sickness Survey, 1950-51

A nation-wide sickness survey, a co-operative effort of federal and provincial government health departments, was carried out during 1950-51 for the purpose of securing estimates of the incidence and prevalence of illness and accidents of all kinds, the amount of medical, nursing and other health care received, and the volume of family expenditures for the various types of health services. A brief outline of the scope and methods of the survey is given in the 1955 Year Book and some of the results are published in the 1955, 1956 and 1957-58 editions. Details are available in bulletin form.

Subsection 3.—Notifiable Disease and Other Health Statistics*

Health statistics collected nationally—in addition to statistics of hospitals, mental and tuberculosis institutions dealt with at pp. 245-256—cover notifiable diseases, illness among federal Civil Servants, and home nursing services. The first two phases are covered briefly in this Subsection, while reference may be made to the 1957-58 Year Book, pp. 269-270, for information on home nursing and health counselling services, a survey based on the experience of the Victorian Order of Nurses for Canada. Valuable statistical material is also available from some provincial governments regarding certain aspects of their health services.

Notifiable Diseases.—Notifiable diseases are essentially communicable diseases, reportable according to provincial health regulations. The method of collecting such statistics is outlined in the 1955 Year Book at pp. 246-247 and numbers of cases and rates for selected diseases for 1926 to 1956 are given in the 1956 and 1957-58 editions at pp. 267 and 268, respectively.

The progress that has been made toward the successful treatment and eradication of such diseases is indicated by the fact that the proportion of total deaths attributable to notifiable diseases dropped from 9.4 p.c. in 1931 to 1.0 p.c. in 1957 and the death rate from 95.2 per 100,000 population to 8.3. Case rates for some of the major diseases over the same period are shown in the chart on p. 259.

Table 12 shows the number of cases reported for selected notifiable diseases and the rates per 100,000 population, by province, for 1957 with totals for 1956. During the late months of 1957 Canada, along with many other countries, experienced a major epidemic of influenza (*see* p. 258) which accounted for the high incidence of this disease. Poliomyelitis, on the other hand, continued the downward trend in evidence since 1953, reaching a low in 1957 of 273 cases of which 172 were paralytic and 26 resulted in death.

* Prepared in the Public Health Section of the Health and Welfare Division, Dominion Bureau of Statistics.

¹ Includes Yukon but excludes Northwest Territories.

² Not reportable.

³ Includes cases where type was not specified.

⁴ Includes cases of streptococcal sore throat.

⁵ Includes chancre, granuloma, inguinale and lymphogranuloma venereum.

⁶ Less than 0.05 per 100,000 population.

Influenza Epidemic of 1957.—Asian influenza, which first appeared in the north of China early in 1957, spread rapidly to many other areas of the world. In Canada it was clearly evident by early September and reached its maximum incidence during the third week of October. The epidemic proportions of the disease seemed to have reached the central provinces first from the United States or by air from overseas, then developed independently in both coastal areas and spread into the intervening areas.

Surveillance reports to the Epidemiology Division of the Department of National Health and Welfare indicated that an estimated 3,000,000 persons (about 18 p.c. of the total population) in Canada were affected during the epidemic. In schools, colleges and other population concentrations, absenteeism ranged from 10 to 70 p.c. and school closing on a temporary basis was quite common in all provinces. The age data available indicated a generally higher incidence for the "under 20 years" group than for other ages, but the more complete diagnosis and notification of cases among children would have some effect on this analysis.

Although exact figures for the absence rate in industry are not available, the results of the monthly labour force survey for the week ended Oct. 19 showed that at some time during that week 257,000 persons lost time from work because of illness, a figure about three times higher than normal. This group of absentees made up 4.6 p.c. of the labour force with jobs; about 161,000 of them were ill for the full week or longer. Estimates for the Civil Service of Canada showed that during the peak period of the epidemic absenteeism was about 5 p.c. of the working force, almost double the normal absenteeism on account of illness.

INCIDENCE OF SELECTED NOTIFIABLE DISEASES 1931-1957

RATE PER
100,000 POPULATION

RATE PER
100,000 POPULATION

*1945 AND 1946, LESS THAN 0.05 AND 1944, 1947-57, NIL

Deaths in Canada from influenza in 1957 numbered 1,762, as compared with 612 from the same cause in 1956, and more than 71 p.c. (1,257) of those deaths occurred during October and November. Following closely the pattern of mortality from influenza of other years, the rate was relatively high in infancy (285 or 16.1 p.c. of all influenza deaths) and in the older ages (692 or 39.2 p.c. in the group "70 years or over").

Industrial Health.—Statistics on industrial health are being developed by the Dominion Bureau of Statistics but so far the only data available relate to the Civil Service of Canada and is confined to measuring ill health in terms of absenteeism on account of illness and injury and to the results of medical examinations.

Illness absenteeism in the Civil Service, under study for many years, now covers a personnel of about 140,000. During the year ended Mar. 31, 1957,* the number of working days lost per employee on account of illness (certified and uncertified) was 7.3; certified sick leave (generally absences of more than three days' duration) averaged 6.9 per employee; average length of certified illness was 16.1 days; and average number of employees absent on certified leave from work per 100 employees was 1.9. Findings show that the average duration of illness increases with age and that it is higher for males than for females.

13.—Rates per 1,000 Employees of Illnesses and Days of Illness for Federal Civil Service Personnel, by Cause, Year Ended Mar. 31, 1957

(Certified sick leave only)

Int. List No.	Cause	Rate per 1,000 Employees	
		Illnesses	Days of Illness
		No.	No.

	Totals, All Illnesses.....	457.3	6,873.0

Similar studies in private industry have been encouraged by the Ontario Department of Health and reports have been issued from time to time by the Department's Divisions of Industrial Hygiene and Medical Statistics. A report covering the combined experience of 15 companies with a total of about 8,000 employees for the year 1957 shows the following results:—

Item	Male	Female
Average number of absences per 100 persons.....	99	248
Average number of calendar days lost per person.....	6.9	11.6
Average number of calendar days lost per absence.....	7.0	4.7

* Used in preference to the subsequent year which was unusual as a result of the influenza epidemic (see p. 258).

PART II.—PUBLIC WELFARE AND SOCIAL SECURITY

Responsibility for social welfare is shared by all levels of government. Costly income maintenance measures such as old age security and family allowances, or programs such as unemployment insurance and the National Employment Service where nation-wide co-ordination is required are administered federally. Substantial federal aid is given to the provinces in meeting the costs of social assistance. The Federal Government also provides services for special groups such as Indians, Eskimos and immigrants.

The Department of National Health and Welfare is the agency generally responsible for federal welfare matters; the Departments of Veterans Affairs, Citizenship and Immigration, and Northern Affairs and National Resources also operate important programs. The Unemployment Insurance Commission is responsible for the operation of unemployment insurance and the National Employment Service.

Administration of welfare services is primarily a responsibility of the province but the provision of services is often assumed by local authorities, generally with financial aid from the province concerned.

Section 1.—Federal Government Programs

Subsection 1.—Family Allowances

The Family Allowances Act of 1944 is designed to assist in providing equal opportunity for all Canadian children. The allowances do not involve a 'means test' and are paid entirely from the federal Consolidated Revenue Fund. They do not constitute taxable income but there is a smaller income tax exemption for children eligible for allowances.

Allowances are payable in respect of every child under the age of 16 years who was born in Canada, or who has been a resident of the country for one year, or whose father or mother was domiciled in Canada for three years immediately prior to the birth of the child. Payment is made each month, normally to the mother, although any person who substantially maintains the child may be paid the allowance on his behalf. Allowances are paid at the monthly rate of \$6 for each child under ten years and \$8 for each child ten or over but under 16 years. The allowances are paid by cheque, except for some Eskimo and Indian children in remote areas for whom payment is made largely in kind because of lack of exchange facilities and the desirability for education in the use of nutritive foods.

If the allowances are not spent for the purposes outlined in the Act payment may be discontinued or made to some other person or agency on behalf of the child. Allowances are not payable for any child who fails to comply with provincial school regulations or on behalf of a girl who is married and under 16 years of age.

The program is administered by the Department of National Health and Welfare through regional offices located in each provincial capital. A welfare section in each regional office deals with welfare questions arising from administration of the allowances. Issuing of the cheques is the responsibility of the treasury division of each regional office which reports to the Chief Treasury Officer of the Department of Finance attached to the Department of National Health and Welfare. The Regional Director for the Yukon and Northwest Territories is located in Ottawa.

Through the Department of Citizenship and Immigration the Federal Government pays family assistance at the rate of \$5 per month for each child under 16 years of age supported by an immigrant who has landed for permanent residence in Canada, or by a Canadian returning to Canada to reside permanently. This allowance, which is paid quarterly and for a maximum period of one year, is not payable to a child receiving family allowances.

Subsection 2.—Old Age Security

The Old Age Security Act of 1952, as amended November 1957, provides a universal pension of \$55 a month, payable by the Federal Government to all persons aged 70 or over, subject to a residence qualification. To qualify for pension a person must have resided in Canada for ten years immediately preceding its commencement or, if absent during that period, must have been actually present in Canada prior to it for double any period of absence and must have resided in Canada at least one year immediately preceding commencement of pension. The pension is suspended when a pensioner leaves Canada but on his return may be resumed and, if absence has not exceeded six months, may be paid retroactively for as many as six months of absence in any calendar year.

The pension is financed on a pay-as-you-go method through a 2-p.c. sales tax, a 2-p.c. tax on taxable corporation income and, subject to a limit of \$60 a year, a 2-p.c. tax on taxable personal income, which are paid into the Old Age Security Fund. The pension is paid from the Consolidated Revenue Fund and charged to the Old Age Security Fund. The program is administered by the Department of National Health and Welfare, through regional offices located in each provincial capital.

Persons in receipt of old age assistance (*see* p. 268) who reach age 70 are automatically transferred to old age security. Others make application to the regional office.

British Columbia, Alberta and Saskatchewan make supplementary payments to recipients of old age security who qualify under a means and residence test. In British Columbia the allowance may not exceed \$20 per month, in Alberta \$15 per month, in Saskatchewan it is a minimum of \$2.50 per month rising to a maximum of \$10 per month. In Ontario, the provincial government shares to the extent of 80 p.c. in the first \$20 per month of supplement paid by a municipality to a needy recipient of old age security. In Manitoba, the province may reimburse a municipality for 80 p.c. of the supplementary assistance it pays to needy recipients of old age security. In some provinces and in Yukon Territory, recipients of the pension who are in special need may be eligible for relief.

Subsection 3.—Government Annuities*

Under the Government Annuities Act (R.S.C. 1952, c. 132), passed in 1908, the Federal Government carries on a service to assist Canadians to make provision for old age. The Act is administered by the Minister of Labour.

A Canadian Government annuity is a fixed yearly income purchased from and paid by the Government of Canada. The annuity is payable in monthly instalments for life, or for life and guaranteed for a period of years. The minimum annuity is \$10 and the maximum \$1,200 a year or the actuarial equivalent if the annuity is to reduce by the amount of payments under the Old Age Security Act. Annuity contracts may be deferred or immediate. Deferred annuities are purchased by periodic or single premiums. Immediate annuity contracts provide immediate income. Annuities may be arranged to reduce by \$55 a month at age 70 to fit in with payments under the Old Age Security Act.

* Revised in the Government Annuities Branch, Department of Labour, Ottawa.

The property and interest of the annuitant are neither transferable nor attachable. In the event of the death of the annuitant before a deferred annuity vests, all money paid is refunded with interest. Provision is made in the Act for group annuity contracts whereby employers may contract for the purchase of annuities on behalf of their employees, or associations on behalf of their members, the purchase money being derived partly from wages and partly from employer contributions or entirely from employer contributions. Group annuity plans now in effect cover a variety of industries and many municipal corporations throughout Canada. Annuities arising from individual contracts may be taxable in either of two ways: (1) if registered under Sect. 79B of the Income Tax Act for tax exemption on premiums, the annuity is fully taxable, or (2) if not registered the annuity is taxable on the interest portion only. Annuities arising from approved pension plans are fully taxable but the employee and the employer are entitled to tax exemption year by year on their annual contributions to the pension plan.

From Sept. 1, 1908, the date of the inception of the system, to Mar. 31, 1958, the total number of annuity contracts and certificates issued, excluding replacements, was 452,053. On the latter date 76,467 annuities were being paid amounting to \$39,386,670 annually and 327,390 deferred annuities were being purchased. The net total amount of purchase money received up to Mar. 31, 1958, was \$1,102,778,000.

Up to Mar. 31, 1958, 1,133 corporations, institutions and associations, as compared with 1,061 up to Mar. 31, 1957, had entered into agreements with the Government to purchase annuities. Under these arrangements 192,820 employees or members were holding certificates for purchase of deferred annuities as compared with 179,434 one year earlier. The number of certificates issued under groups in the fiscal year 1957-58 was 11,236 as compared with 12,476 for 1956-57.

Subsection 4.—Other Federal Government Programs

Unemployment Insurance and National Employment Service.—In 1940, by an amendment to the British North America Act, the Federal Government was given jurisdiction in the field of unemployment insurance and the Unemployment Insurance Act was passed, establishing a national system of unemployment insurance which is outlined in Chapter XVII.

The National Employment Service is operated in conjunction with the unemployment insurance scheme. It is administered through local employment and claims offices and supervised by the Department of Labour. Statistics of positions offered and placements made are given in Chapter XVII.

Prairie Farm Assistance.—The Prairie Farm Assistance Act is administered by the Department of Agriculture; a description of the legislation is given in Chapter IX.

Welfare Services for Indians and Eskimos.—The welfare of Indians and Eskimos is administered by the Department of Citizenship and Immigration and the Department of Northern Affairs and National Resources, respectively; this field is covered in the Population Chapter, pp. 168-170.

Section 2.—Federal-Provincial Programs

Subsection 1.—Old Age Assistance

The Old Age Assistance Act of 1952, as amended November 1957, provides for federal reimbursement to the provinces for assistance to persons aged 65 or over who are in need and who have resided in Canada for at least ten years or who, if absent from Canada during this period, have been present in Canada prior to the commencement of the ten-year period for double any period of absence. On reaching age 70 a pensioner is transferred to Old Age Security. The federal contribution may not exceed 50 p.c. of \$55 per month or of the assistance paid, whichever is less. The province administers the program and, within the limits of the federal Act, may fix the amount of assistance payable, the maximum income allowed and other conditions of eligibility. All provinces and territories pay \$55 per month.

For an unmarried person, total income allowed, including assistance, may not exceed \$960 a year. For a married couple it may not exceed \$1,620 a year or, when the spouse is blind within the meaning of the Blind Persons Act, \$1,980 a year. Assistance is not paid to a person receiving an allowance under the Blind Persons or War Veterans Allowance Acts.

British Columbia, Alberta and Yukon Territory make supplementary payments to recipients of old age assistance who qualify under a means and residence test. In British Columbia the allowance may not exceed \$20 per month, in Alberta \$15 per month, and in the Yukon \$10 per month. In Ontario, the provincial government shares to the extent of 80 p.c. in the first \$20 per month of the supplement paid by a municipality to a needy recipient of old age assistance. In Manitoba, the province is empowered to reimburse a municipality for 80 p.c. of the supplementary assistance it pays to recipients of old age assistance. In some provinces and in the Yukon, recipients of old age assistance who are in special need may be eligible for relief.

³ During fiscal year monthly maximum raised from \$40 to \$46, then to \$55 in May 1958, retroactive to Nov. 1, 1957.

Subsection 2.—Allowances for Blind Persons

The Blind Persons Act of 1952, as amended November 1957, provides for federal reimbursement to the provinces for allowances to blind persons aged 18 or over who are in need and who have resided in Canada for at least ten years. The federal contribution may not exceed 75 p.c. of \$55 per month or of the allowance paid, whichever is less. The province administers the program and, within the limits of the federal Act, may fix the amount of allowance payable and the maximum income allowed. All provinces pay \$55 per month.

To qualify for an allowance a person must meet the required definition of blindness and have resided in Canada for ten years immediately preceding commencement of allowance or, if absent from Canada during this period, must have been present in Canada prior to its commencement for a period equal to double any period of absence.

For an unmarried person, total income including the allowance may not exceed \$1,200 a year; for a person with no spouse but with one or more dependent children, \$1,680; for a married couple, \$1,980. When the spouse is also blind, income of the couple

may not exceed \$2,100. Allowances are not payable to a person receiving assistance under the Old Age Assistance Act, an allowance under the War Veterans Allowance Act, a pension under the Old Age Security Act or a pension for blindness under the Pensions Act.

British Columbia, Alberta, Saskatchewan and Yukon Territory make supplementary payments to recipients of blindness allowances who qualify under income and residence tests. In British Columbia, a flat rate allowance of \$20 per month is payable, in Alberta the supplement may not exceed \$15 per month and in the Yukon \$10 per month. In Saskatchewan a minimum of \$2.50 per month is payable, rising to a maximum of \$10 per month. In Ontario the government shares to the extent of 80 p.c. in the first \$20 per month paid by a municipality to a needy recipient. In Manitoba, the province is empowered to reimburse a municipality for 80 p.c. of the supplementary assistance it pays to recipients of allowances for blind persons. In some provinces and in the Yukon, recipients in special need may also be eligible for relief.

Subsection 3.—Allowances for Disabled Persons

The Disabled Persons Act of 1955, as amended November 1957, provides for federal reimbursement to the provinces for allowances paid to permanently and totally disabled persons aged 18 or over who are in need and who have resided in Canada for at least ten years immediately preceding commencement of allowance or, if absent from Canada during this period, have been present in Canada prior to its commencement for a period equal to double any period of absence. To qualify for an allowance a person must meet the definition of permanent and total disability set out in the Regulations to the Act. The federal contribution may not exceed 50 p.c. of \$55 per month or of the allowance paid, whichever is less. All provinces and territories pay \$55. The province administers the program and, within the limits of the federal Act, may fix the amount of allowance payable, the maximum income allowed and other conditions of eligibility.

For an unmarried person, total income including the allowance may not exceed \$960 a year. For a married couple the limit is \$1,620 a year except that if the spouse is blind within the meaning of the Blind Persons Act, income of the couple may not exceed \$1,980 a year. Allowances are not paid to a person receiving an allowance under the Blind Persons Act or the War Veterans Allowance Act, assistance under the Old Age Assistance Act, a pension under the Old Age Security Act, or the mothers' allowance.

The definition of permanent and total disability employed under the Act requires that a person must be suffering from a major physiological, anatomical or psychological impairment, verified by objective medical findings. The impairment must be one that is likely to continue indefinitely without substantial improvement and that will severely limit activities of normal living.

The allowance is not payable to a patient in a mental institution or tuberculosis sanatorium. A recipient who is resident in a nursing home, an infirmary, a home for the aged, an institution for the care of incurables or a private, charitable or public institution is eligible for the allowance only if the major part of the cost of his accommodation is being paid by himself or his family. When a recipient is required to enter a public or private hospital the allowance may be paid for no more than two months of hospitalization in a calendar year, excluding months of admission and release, but for the period that a recipient is in hospital for therapeutic treatment for his disability or rehabilitation, as approved by the provincial authority, the allowance may continue to be paid. The provincial authority must suspend the payment of the allowance when in its opinion the recipient unreasonably neglects or refuses to comply with or to avail himself of training, rehabilitation or treatment facilities provided by or available in the province.

In the first two years of the program, over half the persons granted an allowance had primary disabilities which were in two medical classes: mental, psychoneurotic and personality disorders, or diseases of the nervous system and sense organs. However, this proportion fell to 41 p.c. in the fiscal year 1957-58. Mental deficiency, the most frequently occurring primary disability, which accounted for over 25 p.c. of all applicants granted an allowance in the first two years of the program, declined to about one-sixth in 1957-58 while there was a marked increase in the relative importance of diseases of the circulatory system.

British Columbia makes supplementary payments of \$20 per month to recipients of disability allowances who qualify under a residence test. In Ontario, the government shares to the extent of 80 p.c. in the first \$20 per month paid by a municipality to a needy recipient. In Manitoba, the province is empowered to reimburse a municipality for 80 p.c. of the supplementary assistance it pays to needy recipients of disability allowances. In some provinces and in Yukon Territory recipients in special need may also be eligible for relief.

retroactive to Jan. 1, 1955, when program became effective.

² Includes certain amounts
³ Excluding Yukon Territory.

Subsection 4.—Unemployment Assistance

Under the Unemployment Assistance Act of 1956, the Federal Government may share with a province and its municipalities 50 p.c. of the cost of financial assistance to unemployed persons. A 1957 amendment deleted a provision under which federal reimbursement is made only in respect of recipients in excess of 0.45 p.c. of the provincial population. No distinction is made in the legislation between the employable and the unemployable.

Reimbursement is made to the province for payments within the existing provincial framework of general assistance. The scale and conditions of relief payments to recipients continue to be determined by the provinces and municipalities, except that the province agrees not to make length of residence a condition for the receipt of assistance when an applicant comes from another province which has signed a similar agreement.

The Act excludes federal reimbursement for payments for persons receiving mothers' allowances or persons who would normally be considered eligible for mothers' allowances. While it also generally excludes inmates of public and charitable institutions, it provides for federal sharing of provincial and municipal payments for those in certain types of homes for special care. Those receiving various types of social security payments under other programs are also excluded but the Federal Government shares with the provinces any additional relief payments, other than cost-of-living bonus or across-the-board pension supplements, made to such persons who are unemployed and in need. Health care and administration costs are also excluded from Federal Government reimbursement.

Agreements for the payment of federal assistance, effective July 1, 1955, were made with five provinces—Newfoundland, Prince Edward Island, Manitoba, Saskatchewan and British Columbia. New Brunswick and Ontario entered the scheme, effective Jan. 1, 1956, and Dec. 1, 1956, respectively; and Nova Scotia and Alberta, effective from Jan. 1, 1958.

Section 3.—Provincial Programs

Subsection 1.—Mothers' Allowances

All provinces make statutory provision for allowances to needy mothers who are deprived of the breadwinner and are unable to maintain their dependent children without assistance. Mothers' allowances programs, whether set out in separate Acts or included in other statutes such as child welfare or assistance Acts, have been administered as separate programs. There was a change in this pattern with the announcement of the Government of British Columbia that, as from Sept. 1, 1958, mothers' allowances would be discontinued and aid provided to needy mothers as to other needy persons under the Social Assistance Act. This is the culmination of a long-term trend in British Columbia of assisting needy mothers under this Act, which is considered more flexible in operation than the Mothers' Allowances Act. In an earlier change in Newfoundland the terms of the Mothers' Allowances Act were incorporated in the Social Assistance Act, but specific categories of needy mothers were retained as one of the three groups for which there are programs of aid under this Act.

The following general remarks do not apply to British Columbia, although the statistical tables include data for British Columbia for the year ended Mar. 31, 1958.

Subject to the conditions of eligibility which vary from province to province, mothers' allowances are payable from provincial funds to applicants who are widowed or whose husbands are mentally incapacitated and, except in Alberta, to those whose husbands are physically disabled and unable to support their families. They are also payable to deserted wives who meet specified conditions; in several provinces to mothers who have been granted a divorce or legal separation; in some, to unmarried mothers; and in Ontario and Quebec to certain Indian mothers. Foster mothers may be eligible under particular circumstances in most provinces.

The age limit for children is 15 years in one province, 16 years in six provinces, and 17 years in two provinces. Provision is made in most provinces to extend payment for a specified period if the child is attending school or if he is physically or mentally handicapped.

In all provinces applicants must satisfy conditions of need and residence but the amount of outside income and resources allowed and the length of residence required prior to application vary, the most common period being one year, although in one province it is five years. All provinces require that the applicant be resident at the time of application and generally that the child or children live with the recipient, and most provinces require that they continue to live in the province while in receipt of an allowance. In 1958, two provinces removed from their statutes the condition requiring Canadian or British citizenship.

In each province the relevant Act is administered by public welfare authorities. In some provinces a Mothers' Allowances Board or Commission makes the final decision regarding eligibility and the amount of allowances granted, or acts in an advisory capacity. Rates of benefit as of July 1958 are given in Table 11 and the number of families and children assisted and amounts of benefits paid as at Mar. 31, 1956-58, are given in Table 12.

11.—Maximum Monthly Rates under Provincial Mothers' Allowances Legislation, July 1958

Province	Mother and One Child	Each Additional Child	Disabled Father at Home	Family Maximum	Supplementary
Nfld. ¹	Food: \$33 or \$27 depending on age of child. Rent: up to \$20 monthly in rural and to \$30 monthly in urban areas.	\$8 for each child under age 16. \$12 for each child age 16 or over.	\$20	None set.	Fuel up to \$10 monthly; clothing to \$24 yearly for child under age 6, to \$36 for child age 6 and under age 16, to \$60 for person age 16 or over. In special circumstances up to \$30 a month additional if necessary for proper support of family.
P.E.I.....	\$45	\$5	No additional allowance granted.	\$75	None granted.
N.S.....	No set maximum; rates are based on average family income for community in which family lives.		No special provision; included in budget on which allowance is based.	\$90	None granted.
N.B.....	\$35	\$10	No additional allowance granted.	\$80	Director may grant an additional \$10 for rent if circumstances require it but only if allowance paid is below maximum.
Que.....	\$60	\$10	\$10	None set (minimum granted \$5).	A supplementary allowance of \$5 may be paid to a beneficiary incapable of working. Where need exists a special monthly allowance may be paid under the Quebec Public Charities Act through the municipality or a social agency. The cost is met in large part by the province, with some contribution by the municipality.
Ont.....	\$120 for mother or father and one child. \$30 for one child living with foster mother.	\$16 for 2nd child \$16 for 3rd child \$12 for 4th child \$10 for 5th child \$8 for 6th child \$25 for 2nd foster child \$15 for each additional foster child.	Included in budget.	\$180	An increase in food allowance may be granted on medical recommendation. A fuel allowance of up to \$24 a month may be granted from Sept. 1 to Mar. 31. An increase of 20 p.c. in fuel allowance may be granted under special circumstances.

¹ Allowances to needy mothers are paid under the Social Assistance Act.

11.—Maximum Monthly Rates under Provincial Mothers' Allowances Legislation, July 1958
—concluded

Province	Mother and One Child	Each Additional Child	Disabled Father at Home	Family Maximum	Supplementary
Man.....	Food, clothing and utilities: \$47- \$59 depending on age of child. Shelter: rent to \$55, or taxes insurance and minor repairs up to \$20 plus principal and interest on mortgage or agreement for sale and necessary major repairs.	\$14 for child up to 3 years \$16 for child 4 to years \$24 for child 7-11 years \$26 for child 12-18 years (Subject to deductions for fourth and each additional child).	\$25	None set.	\$10 monthly if family has no income. In case of extraordinary need up to \$180 a year may be granted; if house- keeper service is required this amount may be exceeded. Fuel allowance granted for eight months.
Sask.....	\$60 \$35 for one child living with a guardian.	\$10 \$20 for each additional child living with guardian.	\$20 Also if confined to a nursing home or san- atorium.	\$150 \$170 if disabled father at home, in nursing home or san- atorium.	The local municipality may grant sup- plementary aid under the Social Assist- ance program. Costs are shared between the province and municipality on a 75-25 basis; in unorganized territories the province assumes full cost.
Alta.....	\$70	\$20 for 2nd and 3rd child \$15 for 4th to 6th child \$10 for 7th to 9th child.	Not applicable.	\$185	Municipalities of residence may grant additional aid, 80 p.c. of the cost of which is reimbursed by the province; in unorganized territories the province assumes full cost.
B.C. ¹	\$42.50 plus \$34 from social allow- ance funds.	\$7.50 plus \$6.50 from social allow- ance funds.	\$7.50 plus \$8.50 from social allowance funds.	A maximum is set but there is no limit to the number who may benefit.	Extra expenditures for additional needs such as repairs and emergencies; also for dietary extras, housekeeper service, prenatal allowances and certain assist- ance to TB patients and TB contacts are met through social allowance funds. Costs shared by province and municipi- alities on 80-20 basis but province meets total cost of provincial cases and of prenatal allowances.

¹ From Sept. 1, 1958, all mothers' allowances cases were transferred to the Social Assistance caseload.

¹ Families receiving aid under the Mothers' Allowances Act which were not yet transferred to Social Assistance (see p. 274).

² Not including \$148,003, \$161,574, and an estimated \$144,000 paid as supplementation from social allowance funds in 1956, 1957 and 1958 respectively.

³ Exclusive of Newfoundland (see p. 274).

Subsection 2.—Provincial Welfare Services

The care and protection of neglected and dependent children, care of the aged, social assistance or relief and other special welfare services are governed by provincial legislation although in many areas responsibility for services rests with municipal or voluntary organizations. The programs and the methods of financing vary considerably, but most provinces share the costs of some or all of the municipal services in organized areas and assume the total cost in unorganized territories.

Newfoundland.—Provincial welfare services are administered by the Department of Public Welfare through a number of regional welfare centres.

Child Care and Protection.—Child welfare has developed largely as a public service and is administered by the Child Welfare Division. Neglected children, made wards of the Director, are placed in foster or adoptive homes or in institutions. The Department pays for the maintenance of wards, grants subsidies for children admitted to orphanages administered by religious organizations, and contributes towards the cost of educating blind and deaf-mute children in institutions outside the province. The Division operates an Infants' Home providing short-term care.

The Division of Corrections deals with juvenile delinquents and adult offenders and administers correctional institutions for boys and girls. A Youth Guidance Authority has been established.

Care of the Aged.—The province maintains a Home for the Aged and Infirm at St. John's and also pays in whole or in part the cost of maintaining needy old people in the Salvation Army Home, in the Cowan Mission Association Home, in licensed boarding homes or in private homes. In 1955, a grant of 20 p.c. of costs, to be paid over a ten-year period, was made to the Roman Catholic Episcopal Corporation for the construction of a home and provision is made for grants to similar projects under other auspices.

Social Assistance.—Aid is given under the provincial Social Assistance Act to certain needy mothers with dependent children, to incapacitated persons, and to unemployed persons. This aid is administered by the province, which receives 50 p.c. reimbursement from the Federal Government under the terms of the Unemployment Assistance Act.

Prince Edward Island.—The Department of Welfare and Labour is responsible for the administration of provincial welfare services.

Child Care and Protection.—Under the Children's Protection Act, neglected or delinquent children are placed under the guardianship of the Director of Child Welfare. They are cared for in foster or adoptive homes, boarding homes or children's institutions. Provincial grants are made to child welfare agencies and to the two private orphanages, one Protestant and one Roman Catholic. Juvenile Courts are under the Attorney General's Department and juvenile delinquents are cared for at the expense of the Department of Welfare and Labour in correctional institutions of neighbouring provinces.

Care of the Aged.—The aged and infirm are cared for in Falconwood Mental Hospital and in two provincial infirmaries.

Social Assistance.—The Department provides direct social assistance in rural areas and assumes 75 p.c. of the cost of assistance granted by the City of Charlottetown and the incorporated towns and villages. The Department also operates a province-wide program of financial aid to families where the bread-winner is suffering from tuberculosis and is unable to support the family. Under the terms of the Unemployment Assistance Act, the Federal Government reimburses the province for 50 p.c. of the costs of assistance.

Nova Scotia.—Provincial welfare services are administered by the Department of Public Welfare through a number of regional offices.

Child Care and Protection.—The child welfare program, including the inspection of institutions and the licensing of foster and maternity homes, is under the Director of Child Welfare. The Director supervises the 12 Children's Aid Societies to whom child care and protection is delegated and directly administers the program in the four areas in which societies are not organized. By court decision a neglected child may be made a ward of the Director or of a Children's Aid Society. The Societies are assisted by provincial grants and the cost of maintaining wards is shared by the province and municipality of residence.

The Department operates the Nova Scotia Training School for mentally defective children, and the Nova Scotia School for Boys for juvenile delinquents. It is also responsible for the operation of the nine Juvenile Courts and the supervision of their probation staffs. The municipality of residence is responsible for the maintenance of children in reformatories although the province may contribute also if the reformatory complies with specified standards.

Care of the Aged.—The aged are cared for in municipal or county homes, in homes operated by religious or private organizations and in private boarding homes where the municipality of residence may contribute to the cost of maintenance. The province

reimburses the municipalities for two-thirds of their expenditures for the maintenance of needy persons in municipal homes. Homes for the aged are subject to provincial inspection.

Social Assistance.—Social Assistance is administered by the municipality, which receives reimbursement from the province for two-thirds of the cost of assistance given and one-half of the costs of administration. The province assumes the full cost of aid to transients. As of Jan. 1, 1958, the province receives reimbursement of 50 p.c. of assistance from the Federal Government, under the terms of the Unemployment Assistance Act.

New Brunswick.—The Department of Health and Social Services administers provincial welfare legislation.

Child Care and Protection.—Under the Children's Protection Act, administered by the Minister of Health and Social Services, responsibility for protection and placement services is largely delegated to Children's Aid Societies. Guardianship of a neglected child may be vested in a Society, in the Director of Child Welfare or in the Court. Children's boarding homes, with some exceptions, are licensed and are subject to the provincial inspection required for all child care institutions. The province and the municipality of residence each contribute towards the maintenance of wards committed to an institution, and the province reimburses municipalities for one-half of the cost of maintaining wards placed in foster homes, up to a prescribed maximum. The province also makes grants to the Children's Aid Societies to assist in their general child welfare program. The Department may place blind or deaf-mute children in special schools outside the province. Juvenile Courts are under the Attorney General's Department and delinquent boys may be placed in the Provincial Industrial School for Boys which reports to the Minister of Health and Social Services.

Care of the Aged.—Homes for the aged are operated under municipal, religious, fraternal and private auspices, receiving no direct financial support from the province. Private homes are subject to provincial licensing and inspection under the Health Act.

Social Assistance.—Relief to needy persons is a local responsibility and is generally discharged through the provision of institutional or indoor relief to those in need. Outdoor relief is provided in a number of centres. Under the Unemployment Assistance Act, the Federal Government pays 50 p.c. of the assistance granted; this is distributed to the municipalities through the provincial Department of Municipal Affairs.

Quebec.—Provincial welfare measures are administered by the Department of Social Welfare and Youth. Legislation passed in 1956 provided for the transfer to that Department from the Department of Health of responsibilities under the Public Charities Act for orphanages, nurseries, adoption and welfare institutions and the placement of abandoned children. The Public Charities Act embodies the Government's policy of granting subsidies to religious and private institutions rather than creating public services. Grants representing a major share of the costs of the services are made by the province, with the municipalities and the institutions also contributing.

Child Care and Protection.—Needy or abandoned children have traditionally been cared for in institutions such as orphanages and nurseries although there has been a notable increase in the use of foster homes by child welfare agencies. Children who are found by a Social Welfare Court or other Court to be particularly exposed to moral or physical dangers may be admitted to recognized youth protection schools administered by the Department of Social Welfare and Youth. Municipalities of residence, depending on their size, contribute from 15 to 25 p.c. of the operating and maintenance costs of these schools; the province contributes the remainder and the entire cost of new construction. The Social Welfare Courts, which are under the jurisdiction of the Department of the Attorney General, have statutory responsibility in connection with child and youth protection and certain other provincial programs and also serve as Family Courts. Children who have

been exposed to tuberculosis but who have not been infected are placed with rural families under the supervision of the Department of Health in co-operation with child welfare agencies.

Care of the Aged.—Institutional care for indigent old people is provided under the Quebec Public Charities Act through private institutions. Under the same Act, family welfare agencies administer home allowances to needy old people who do not require institutional care. Standards in homes are governed by regulations under the provincial Public Health Act.

Social Assistance.—Assistance is given under the Public Charities Act, usually in the form of institutional care, but outdoor relief is provided through some municipal departments and private agencies. The Department of Colonization operates a program whereby families in need are settled on the land in newly opened districts and granted financial aid until they become self-supporting. In these areas a disability pension scheme is linked to a program of free medical services.

Ontario.—Provincial welfare services are administered by the Department of Public Welfare. The province is divided into 17 welfare districts each in charge of a supervisor.

Child Care and Protection.—Responsibility for the local administration of the Child Welfare Act is delegated by the province to Children's Aid Societies under the supervision of the Director of Child Welfare. Maintenance costs of children made wards of a society or taken into care as non-wards on agreement with a municipality are paid by the municipality of residence with a 40-p.c. reimbursement by the province. The province also makes annual grants to the societies for their work other than the care and maintenance of children. Children's institutions are governed by provisions of the Charitable Institutions Act and day nurseries by the Day Nurseries Act. In 1957 a Children's Boarding Homes Act was passed requiring the registration of all premises not covered by other legislation in which five or more children not related to one another are lodged, boarded or cared for. The Act provides for inspection and for the establishment of standards in the operation of the homes. The province makes per diem grants for children in charitable institutions and pays one-half of the operating and maintenance costs of municipal day nurseries. Juvenile Courts are under the Attorney General's Department and training schools for juvenile offenders are operated by the Department of Reform Institutions.

Care of the Aged.—Under the Homes for the Aged Act municipalities must provide institutional or boarding home care for the aged. The province contributes 50 p.c. of the cost of constructing approved homes or of purchasing and altering a building for use as a home and of approved additions and extensions, and 70 p.c. of their net operating and maintenance costs. It also pays up to 70 p.c. of the cost of maintenance in approved boarding homes. Private homes for the aged are approved, inspected and assisted under the Charitable Institutions Act which provides grants-in-aid of construction equalling 50 p.c. of the costs up to \$2,500 per bed and maintenance grants of 75 p.c. of the amount spent by the organization for the maintenance of each resident up to \$3.30 a day. The Elderly Persons Housing Aid Act provides for grants to limited-dividend housing corporations building low-rental housing for elderly persons.

Social Assistance.—Under the provincial Unemployment Relief Act the province reimburses municipalities, up to a prescribed maximum, for 80 p.c. of their expenditures on relief to needy persons and on incapacitation allowances and rehabilitative measures for single needy handicapped residents. In unorganized areas the program is administered and financed by the Department. The Federal Government reimburses the province for 50 p.c. of costs of assistance under the terms of the Unemployment Assistance Act. The Soldiers' Aid Commission extends emergency assistance and advice to ex-servicemen and their families.

Manitoba.—The Public Welfare Division of the Department of Health and Public Welfare is responsible for provincial welfare services.

Child Care and Protection.—The Director of Public Welfare administers provincial child welfare legislation, including the supervision of Children's Aid Societies and of child care institutions. The Public Welfare Division administers child welfare services in a large area of the province, through decentralized district offices. In the remainder of the province the Director supervises four non-denominational Children's Aid Societies and one sectarian society. Neglected children may be made wards of the Director of Public Welfare or of a Children's Aid Society. Municipalities are responsible for the maintenance of wards with provincial reimbursement on the basis outlined below under Social Assistance. Payment of annual provincial grants to Children's Aid Societies is conditional on the provision of a basic level of service and the collection of substantial voluntary contributions.

Care of the Aged.—Institutions and nursing homes for the aged and infirm are supervised and licensed by the Department under public health legislation. Under the Elderly Persons Housing Act, the province makes construction grants to municipalities, charitable organizations or limited-dividend companies equalling 20 p.c. of costs for housing accommodation and one-third of the costs of building and renovating homes for the aged. Under the Social Assistance Act the province reimburses the municipalities for 80 p.c. of the amount they spend for the maintenance of needy older persons in boarding or nursing homes.

Social Assistance.—Municipalities are responsible for social assistance, which is defined as relief to indigents, together with maintenance costs of children under the Child Welfare Act. The province reimburses a municipality to the extent of at least 40 p.c. of its social assistance costs; where it is to the municipality's advantage, provincial reimbursement is on the basis of 80 p.c. of excess of the municipality's social assistance costs over the revenue the municipality receives from a tax levy of one mill on its equalized assessment. The province is responsible for aid to persons without municipal residence as well as for general assistance in unorganized territory. Under the terms of the Unemployment Assistance Act, the Federal Government reimburses the province for 50 p.c. of the costs of assistance.

Saskatchewan.—Provincial welfare services are administered by the Department of Social Welfare and Rehabilitation.

Child Care and Protection.—The Department provides welfare services for children throughout the province with the exception of Saskatoon where certain responsibilities are delegated to the Children's Aid Society. Children found to be neglected are, by court order, made wards of the Minister and are placed in foster homes, adoptive homes, or institutions. A portion of the maintenance costs of wards, except of children born out of wedlock for whom the province assumes the entire cost, is paid by the municipality of residence. The Branch operates three institutions for the temporary care of wards and also a program of non-ward care.

The Corrections Branch of the Department is responsible for both adult and juvenile correctional services, supervises probation and parole services for juvenile delinquents and administers the Saskatchewan Boys' School and the provincial gaols. A Youth Guidance Authority supervises the discharging of juveniles from probation, from institutions and from parole.

Care of the Aged.—Aged and infirm persons are cared for in four provincial nursing homes and in private homes for the aged. The latter are inspected and licensed under the Housing Act which also empowers the province and municipalities to subscribe to the stock of limited-dividend housing companies building low-rental accommodation for older

persons. The province may also make loans to the municipalities to assist them in subscribing. Capital grants amounting to 20 p.c. of construction costs and also maintenance grants equalling \$40 per bed per year may be made to municipalities, church or charitable organizations sponsoring approved homes or housing projects.

Social Assistance and Special Services.—The costs of assistance to needy persons with municipal residence are divided on a 75-25 basis between the province and the municipalities and the province pays the entire cost for transients and for persons in unorganized areas. The Federal Government, under the terms of the Unemployment Assistance Act, reimburses the province for 50 p.c. of the costs of assistance.

The Rehabilitation Branch provides training and placement services for the handicapped; one-half the cost of this training is borne by the province and one-half by the municipality of residence. It is also responsible for the rehabilitation of minority groups and operates a farm where the métis—persons of mixed Indian and white stock who do not qualify under the Indian Act—are instructed in modern methods of farming while being paid for their work. Three schools are conducted for métis children.

The Department administers the Provincial Housing Act which empowers the province to enter into public housing projects under the National Housing Act, and to stimulate construction of low-rental housing projects by limited-dividend housing corporations.

Alberta.—The Department of Public Welfare is responsible for the administration of provincial welfare measures. It has branches in the four larger urban centres and inspectors are located in other areas throughout the province.

Child Care and Protection.—The provincial child welfare program is directed by a Child Welfare Commission. Neglected children, made wards of the government by court order or by agreement, may be placed in foster homes, adoptive homes or institutions. The cost of maintenance of wards is paid by the province. The Home Investigating Committee is responsible for the inspection and the licensing, where required, of all homes and institutions in which children are given care. The Attorney General's Department administers legislation regarding juvenile delinquency.

Care of the Aged.—Provincial grants of \$1,500 a bed for new construction or equalling one-third of costs or \$750 for every 200 sq. feet of occupied floor space for renovation of a building may be made to municipalities establishing homes with ten or more beds for aged or infirm persons. The province also meets up to 80 p.c. of the cost incurred by municipalities for the maintenance of indigent aged and infirm persons in homes licensed by the municipality in accordance with specified standards.

Social Assistance.—Municipalities are responsible for assistance to indigent residents but the province reimburses the municipalities for up to 80 p.c. of the value of the assistance and pays the total cost of assistance to transients. As of Jan. 1, 1958, the province receives reimbursement of 50 p.c. of the cost of assistance from the Federal Government under the terms of the Unemployment Assistance Act. The province administers relief to residents of unorganized districts. Families may be assisted through settlement on suitable farm lands. The Single Men's Branch maintains two hostels and one welfare centre to care for unemployable single homeless men without municipal domicile. The province has also established a number of métis colonies where settlers have extensive fishing, hunting and trapping rights and are encouraged to engage in lumbering, agriculture and stock-raising. Educational services are provided and government operated stores sell goods at cost price.

Widows Pensions.—Under the Widows Pension Act, widows aged 60 to 64 years inclusive may receive pensions of up to \$55 per month. Also included in this category are wives of men committed to mental hospitals or deserted wives who meet the conditions of need and residence and are within the designated age group.

British Columbia.—Administration of provincial services by the Social Welfare Branch of the Department of Health and Welfare is decentralized through district and municipal offices in six regions covering the whole province. Generalized field service is provided by provincial social workers. The staff of the Social Welfare Branch is also responsible for welfare services required in connection with a number of programs operated by the Health Branch.

Cities and municipalities of over 10,000 population must have their own social welfare departments to administer the social assistance program and to provide case-work services. The province pays 50 p.c. of the salaries of municipal social workers or, where more than one is needed, matches the municipal appointees, worker for worker. Smaller municipalities may have their own or amalgamated social welfare departments or they may pay for the services of the Social Welfare Branch.

Child Care and Protection.—The Child Welfare Division administers legislation governing the protection of children, including adoptions, and provides direct services except at Vancouver and Victoria where it supervises the Children's Aid Societies. Municipalities are responsible for the costs of maintaining wards but the province reimburses them to the extent of 85 p.c. of such expenditure and pays the entire cost for children in unorganized areas. The province pays the total maintenance cost of wards who are children of unmarried mothers. Child care institutions, boarding homes and day nurseries are licensed and supervised. The Social Welfare Branch administers an industrial school for delinquent boys and one for delinquent girls. Juvenile Courts are under the jurisdiction of the Attorney General's Department.

Care of the Aged.—The province operates the Provincial Home for elderly homeless men, the Provincial Infirmary for the chronically ill and the Provincial Homes for the Aged for senile and psychotic patients. It also licenses and supervises homes for the aged, nursing homes, and boarding homes and, where necessary, shares with the municipalities on an 80-20 basis the costs of maintaining needy residents. The province meets the total costs for provincial charges. Under the Elderly Citizens Housing Aid Act the province makes grants amounting to one-third of construction costs to municipalities and non-profit corporations, including religious and service organizations, building homes or low-rental housing units for elderly citizens.

Social Assistance.—The social assistance program is administered by the local municipal office or by the provincial district office. It includes allowances to indigent individuals or families, counselling services, occupational training and the maintenance costs of nursing home or boarding home care. The province reimburses the municipalities for 90 p.c. of the cost of basic and certain supplementary social assistance payments to indigent municipal residents and assumes the total cost of assistance granted for those without municipal residence. The Federal Government reimburses the province by 50 p.c. of the costs of assistance, under the terms of the Unemployment Assistance Act.

Subsection 3.—Workmen's Compensation

In all ten provinces, legislation is in force providing for compensation for injury to a workman by accident arising out of and in the course of employment or by a specified industrial disease. A summary of provincial workmen's compensation legislation is given in Chapter XVII.

Subsection 4.—Charitable and Benevolent Institutions

Statistics of charitable and benevolent institutions were secured by the Census of 1951 and covered the 1950 activities of 533 institutions, 490 being residential institutions and 43 being day nurseries. Summary statistics are given in the 1954 Year Book, p. 263.

PART III.—NATIONAL VOLUNTARY HEALTH AND WELFARE ACTIVITIES

A number of national voluntary agencies carry on important work in the provision of health and welfare services, planning and education. These agencies, some of which are described below, supplement the services of the federal and provincial authorities in many fields and play a leading role in stimulating public awareness of health and welfare needs and in promoting action to meet them.

The Canadian Welfare Council.—The Council, established in 1920, is a national voluntary association of organizations and individual citizens whose aim is to further the development of social services in Canada. Member organizations include community funds and councils, other private social agencies, various federal, provincial and municipal departments, and citizen groups and individuals active in the fields of health, welfare and recreation. It furnishes authoritative information, technical consultation and field service in the main areas of social welfare and provides a means of co-operative planning and action by public and private agencies.

The policies and programs of the Council are determined by its members under the leadership of a nationally representative board of governors. Aided by professional staff, the members work together through Divisions of Family and Child Welfare, Recreation, Public Welfare, Corrections, and Community Chests and Councils, and through special committees on such subjects as welfare of immigrants and the aging. Departments of the Council include the Information Branch and French Speaking Services. Council publications include the periodicals *Canadian Welfare* and *Bien-Être Social Canadien*, a directory of Canadian welfare services, pamphlets, and division bulletins.

The Canadian Red Cross Society.—Established in 1896 in Canada, the Society is affiliated with the International Red Cross and has branches in all ten provinces with a national headquarters in Toronto. Its objectives, defined in its Charter, are "... in time of peace or war to carry on and assist in work for the improvement of health, the prevention of disease and the mitigation of suffering throughout the world". Its activities cover a very broad area, ranging from national and international disaster relief services to the support of local projects. One of its major activities in Canada has been the operation of blood banks in co-operation with provincial health departments; it also maintains outpost hospitals, nursing stations and emergency units in several provinces. The Junior Red Cross promotes health education through its schoolroom branches across Canada; it supports a special fund to supply treatment to indigent handicapped children in Canada and a fund to promote international understanding.

Victorian Order of Nurses.*—Since its inception in 1897, the Victorian Order of Nurses has provided a professional home nursing and health counselling service. In all provinces except Prince Edward Island, the association's nurses carry out bedside nursing, prenatal, postnatal and newborn care. In some provinces they also assist provincial health authorities in tuberculosis and venereal disease programs and conduct child health clinics. In 1958 the Order had 117 branches located in nine provinces. The national office is in Ottawa.

The Canadian National Institute for the Blind.—Since its inception in 1918 the Canadian National Institute for the Blind has been dedicated to the provision of rehabilitation and social welfare services to the blind and to those with partial sight. The national office, located in Toronto, serves all provinces through its seven regional divisions and 46 branches. The Institute provides both social services and financial assistance; it arranges for examinations and eye treatment services, purchases glasses for needy individuals and operates an eye bank. Under an extensive rehabilitation program with training facilities centred in Toronto, it trains blind persons in various occupations,

* A more complete picture of visiting nursing services of the Order may be found in the 1957-58 Year Book, pp. 269-270.

offers job counselling and placement services and, for those who cannot compete in industry, it provides sheltered workshops; its more than 8,000 newspaper, tobacco and confectionery concession stands are operated by blind persons. Sightless field workers bring a home-training program to blind persons to help them learn Braille, typing and handicrafts, and a special program for pre-school blind children prepares them for attendance at a school for the blind. The Institute builds and maintains residential quarters and recreational facilities in all larger centres and supplies Braille books and recordings to the blind from its national library in Toronto.

The Health League of Canada.—The Health League of Canada, first established in 1918 as a National Committee for Combating Venereal Disease, now embraces about sixty national member associations supporting a wide variety of health activities. The primary objectives of the League are the promotion of personal and community health and the prevention of disease through health education. Its major activities are administered from a national office in Toronto, usually working through the affiliated organizations. Educational efforts include the provision of speakers for meetings and the preparation of radio scripts, health education films and literature; a magazine is published bi-monthly and weekly news bulletins are released to the press. The League also sponsors a National Health Week and a National Immunization Week.

St. John Ambulance Association.—The St. John Ambulance Association began as a local unit in Montreal in 1884. The Association is composed of two parts, the St. John Ambulance Association and the St. John Ambulance Brigade, the first devoted to teaching first aid and home nursing and the latter directing the emergency corps of trained personnel. Headquarters of the Association is in Ottawa, with provincial divisions in all provinces controlling their own programs and financing the operation of their local branches.

The Canadian Tuberculosis Association.—Founded in 1900 to stimulate public demand for increased treatment facilities, the Association has extended its objectives to case-finding, diagnostic services, rehabilitation of ex-patients and public education. Provincial organizations, which exist in all provinces, are largely autonomous, with the national office in Ottawa acting as a co-ordinating agency for the distribution of publicity material and as an advisory body to government agencies as well as to the provincial and local branches. The most important activity of the provincial bodies is the chest X-ray program, which annually reaches nearly two million individuals. Some provincial units also provide BCG vaccination to selected groups, supply nursing, welfare and rehabilitation services to patients as well as follow-up services. The Association and its provincial bodies are supported by the sale of Christmas seals, with federal and provincial governments providing grants for specific projects.

The National Cancer Institute of Canada.—The National Cancer Institute, composed of persons representing professional societies and agencies concerned with cancer research and therapy, was founded in 1947 to develop a nationally co-ordinated research and professional education program. The Institute promotes fundamental research through selected projects in universities, hospitals and research centres, maintains a Canadian Tumour Registry, provides training fellowships and, in co-operation with the Canadian Medical Association and medical schools, promotes professional education on cancer topics. The Institute receives support from federal and provincial grants and from the Canadian Cancer Society; a special project on lung cancer has been supported by the Canadian Tobacco Industry.

The Canadian Hearing Society.—Organized in Toronto in 1940 as the National Society of the Deaf and the Hard of Hearing, the Society operates chiefly in Toronto and the surrounding area. It is concerned with the preservation of hearing, the treatment of deafness and the provision of rehabilitation services for those with impaired hearing. It provides otological examinations, counselling, vocational guidance and job placement services for the deaf or hard of hearing, and hearing aids to indigent persons.

The Canadian Mental Health Association.—The Association, organized in 1918 as the National Committee for Mental Hygiene, now has divisions in all provinces except Prince Edward Island and Newfoundland; its national office is located in Toronto. Since its inception the organization has participated directly or indirectly in almost every development in the mental health field in Canada. The Association conducts an active public education program, serves as consultant to government departments, welfare agencies and voluntary organizations, operates a teacher training program and encourages research. It is supported by voluntary donations and federal and provincial grants.

The Canadian Cancer Society.—Organized in 1938 to co-ordinate voluntary activities and disseminate knowledge in the cancer field, the Canadian Cancer Society operates in all provinces and has its national office in Toronto. Its services include a public education program, welfare services such as transportation, home nursing and cancer dressings to needy persons, and fellowships to medical graduates for advanced study in cancer. Voluntary subscriptions to the Society provide the major source of funds for the basic research program of the National Cancer Institute of Canada. The Society also supports clinical research.

National Heart Foundation of Canada.—The Canadian Heart Foundation, formed in 1947 by physicians to co-ordinate research and disseminate information, was replaced by the National Heart Foundation of Canada in 1956. Its membership consists of lay and medical organizations interested in promoting or assisting research on cardiovascular diseases. Its national office is in Toronto. Provincial branches have been established in all provinces from Quebec west.

The Canadian Paraplegic Association.—The Canadian Paraplegic Association, which was established in 1945 to complement the specialized treatment and rehabilitation services developed for veterans by the Department of Veterans Affairs, now includes services for civilian paraplegic cases and persons seriously handicapped by poliomyelitis and other disabling conditions. The national office of the Association and the major treatment centre, Lyndhurst Lodge, are housed in the same building in Toronto, Ont. Services include in-patient and out-patient therapy, the provision of prosthetic appliances, loans to patients, and rehabilitation services such as job counselling. Four regional divisions also have been established—the Maritime, Quebec, Central Western and Western Divisions. The Western Division is affiliated with the G.F. Strong Rehabilitation Centre in Vancouver.

The Canadian Council for Crippled Children and Adults.—The Council was established in 1937 to co-ordinate and support activities for the care and rehabilitation of physically impaired children. The first provincial organization was formed in Ontario in 1922 and similar organizations, which have remained autonomous, now exist in all provinces except Prince Edward Island. In 1954 the services of the organization were extended to include adults. Programs in the provinces vary, ranging from the establishment of cerebral palsy clinics and the operation of summer camps for the handicapped, to payment for treatment services, prosthetics, and hospital and nursing care for needy handicapped persons. In most provinces, service clubs raise funds to support the work of the organization, particularly through the sale of Easter Seals.

The Canadian Arthritis and Rheumatism Society.—Established in 1948 to promote research, professional education and treatment services in the field of rheumatism and arthritis and to disseminate factual information, the Society has branches operating in all provinces except Prince Edward Island and Newfoundland; its national office is in Toronto, Ont. Medical advisory boards in each of the eight provinces and one at the national level give advice and guidance to the provincial and national directors. The Society sponsors an educational program both for the general public and for physicians. It encourages the establishment of stationary clinics in general hospitals for the treatment of low-income patients. Its branches pioneered in the operation of mobile clinics and now operate some seventy units to bring treatment to home-bound patients and in two provinces

support a mobile consultative service. The national body promotes research projects in various universities and institutions and provides clinical fellowships to physicians in all parts of Canada.

Multiple Sclerosis Society of Canada.—Organized in 1948 to encourage, support and co-ordinate research regarding multiple sclerosis, the Society also compiles statistics and carries on public education. The national office in Ottawa is maintained by twelve provincial and local chapters whose chief function is fund raising from which research projects are financed.

The Canadian Association for Retarded Children.—The Association was incorporated in 1958 to assist and give co-ordinated direction to the work of a growing number of organizations for the mentally retarded as represented by 10 provincial and some 105 local groups. Membership of the locals exceeds 12,000, most of whom are parents of mentally retarded children.

The Muscular Dystrophy Association of Canada.—This Association was organized in 1954 to stimulate and unify efforts in research into the cause, nature and cure of muscular dystrophy and to promote the establishment of facilities for diagnostic, consultative and treatment services. It has a national office in Toronto supported by nine regional chapters and its chief activity is the support of research projects in medical centres across the country.

PART IV.—VETERANS SERVICES*

The Department of Veterans Affairs administers most of the legislation making up the Veterans Charter and provides administrative facilities for the Canadian Pension Commission which administers the Pension Act and the Civilian War Pensions and Allowances Act, for the War Veterans Allowance Board which is responsible for the War Veterans Allowance Act, and for the Secretary-General of the Imperial War Graves Commission (Canada).

The main benefits now provided to veterans consist of medical treatment for those eligible to receive it, land settlement and home construction assistance, educational assistance for children of the war dead, veterans insurance, general welfare services, disability and widows pensions, and war veterans allowances. The work of the Department, excepting the administration of the Veterans' Land Act, is carried out through 17 district and five sub-district offices in Canada and one district office in England. There are eight VLA district offices and 31 regional offices to administer the benefits of that Act.

Section 1.—Medical, Dental and Prosthetic Services

Medical Services.—The Department of Veterans Affairs, through its Treatment Services Branch, provides medical services for eligible veterans across Canada. Service is also provided for members of the Armed Services, the Royal Canadian Mounted Police, and the wards of other governments or departments at the request and expense of the authorities concerned.

The primary responsibility of the Branch is provision of examination and treatment to disability pensioners for their pensionable disabilities. These veterans constitute about one-quarter of the in-patient load. Treatment is provided to the pensioner regardless of his place of residence, but service to other veterans is available in Canada only.

Other main groups of veterans receiving treatment are War Veterans Allowance recipients, veterans whose service and need make them eligible for domiciliary care, and veterans whose service and financial circumstances render them eligible for free treatment, or at a cost adjusted to their ability to pay. If beds are available, any veteran may receive treatment in a departmental hospital on a guarantee of payment of the cost of treatment.

* Prepared by the Department of Veterans Affairs, Ottawa.

Treatment is provided across Canada in 11 active treatment hospitals, two convalescent centres, and two homes maintained for the provision of domiciliary care. The operating capacity of these institutions at Mar. 31, 1958, was 9,215 beds. An additional 588 beds are available in veterans pavilions situated at Ottawa, Regina and Edmonton. Pavilions are owned by the Department but are operated by the parent hospital and medical staff is provided by the Department. Where departmental facilities are not available, the eligible veteran may receive treatment under the Doctor-of-Choice Plan in the hospital of his choice by his own doctor, at the expense of the Department. Professional staffs of active treatment hospitals are employed on a part-time basis; in the main they are recommended for appointment by the Deans of Medicine of the universities with which the hospitals are affiliated. The majority are members of medical faculties, engaged in teaching and private practice.

The Department maintains research and medical teaching programs in its institutions, both of which are considered essential to attract highly qualified professional men and thus ensure the veteran of the highest quality of medical care. All active treatment hospitals have been approved by the Royal College of Physicians and Surgeons of Canada for postgraduate teaching in medicine and surgery, and the majority are approved for advanced postgraduate training in the various specialties. An intern-resident program is in effect; at the end of March 1958, 266 residents and interns were in training together with 135 interns in occupational therapy, physiotherapy, psychology, laboratory, and medical social services.

Since the inception of the Clinical Research Program in 1950 over 400 research projects have been considered and approval given to 300. During the fiscal year 1957-58 about 100 projects were in progress. The program is varied, but in the main deals with conditions affecting aging, which the Department is in a unique position to investigate. Clinical Investigation Units have been set up in active treatment hospitals located at Montreal, Toronto, London, Winnipeg, and Vancouver. These are self-contained units providing detailed metabolic and other studies essential for research and treatment.

During the year ended Mar. 31, 1958, 42 departmental employees attended courses assisted fully or partly by the research and educational vote. At the end of the year one school for nursing assistants remained in operation. This school, at Camp Hill Hospital in Halifax, has an annual capacity of 60 graduates who are offered employment in departmental hospitals across Canada.

Departmental hospitals provide base hospital facilities for the treatment of members of the Armed Forces. The Ste. Foy Hospital, near Quebec City, and Sunnybrook at Toronto have self-contained units but in other institutions there is a close integration of patients. The units are staffed by Armed Service personnel and utilize the ancillary services of the hospital. They also provide training facilities for members of the medical services of the Armed Forces.

Much progress has been made toward the ultimate goal of a nation-wide chain of modern fire-resistant institutions, by replacement of obsolete accommodation. Patient-load for the year ended Mar. 31, 1958, was as follows:—

<i>Item</i>	<i>No.</i>
Patients in departmental hospitals at Mar. 31.....	7,844
Patients in other hospitals at Mar. 31.....	2,992
Out-patients on strength at Mar. 31.....	436
TOTAL PATIENTS AT MAR. 31.....	11,272
Admissions to departmental hospitals during year.....	51,937
Admissions to other hospitals during year.....	22,272
Admissions to out-patient strength during year.....	2,104
TOTAL ADMISSIONS DURING YEAR.....	76,313
Patient-days in departmental hospitals 1957-58.....	2,750,854
Patient-days in other hospitals 1957-58.....	930,771
TOTAL PATIENT-DAYS.....	3,681,625

During the fiscal year 1957-58, several amendments were made to Treatment Regulations. Among the more important were those pertaining to Sect. 13, where eligibility with respect to war service and financial circumstances was aligned with the applicable section of the War Veterans Allowance Act. Also, upward adjustments were made in travel and other allowances paid to veterans required to report for examination or treatment by the Department or the Canadian Pension Commission. Effective Jan. 1, 1958, the Department obtained authority to pay for the services of non-departmental physicians at a rate up to 90 p.c. of the pertinent provincial minimum tariff. This change eliminated the DVA Schedule of Fees previously in effect.

The role of DVA hospitals under the Federal-Provincial Hospital Insurance Plan was agreed upon after discussions with representatives of the Department of National Health and Welfare and with the provincial governments concerned. Departmental hospitals will be recognized for the provision of insured services to veterans and arrangements have been made to pay, on behalf of veterans who are WVA recipients, any premiums necessary to have them insured under the Plan. Co-insurance charges, where they apply, and medical and surgical costs will be the responsibility of the Department. The Veterans Treatment Regulations remain the authority for the treatment of veterans (and others) in DVA institutions and elsewhere under Departmental aegis, regardless of whether or not the hospitalization is at the expense of the Hospital Insurance Plan.

Dental Services.—Dental treatment is provided for those pensioned veterans whose disability would be alleviated by such treatment, for War Veterans Allowance recipients, and for other persons whose health care is the responsibility of the Department, such as Royal Canadian Mounted Police personnel and members of the Canadian Forces. Treatment is also provided at the request of other governments. The Department employs 37 full-time dentists, one half-time dentist and two dental consultants, specialists in their fields, on a part-time basis. Twenty dental clinics are maintained in Departmental hospitals and centres, 18 of them on a full-time basis. Elsewhere the services of private dentists on a "fee-for-service" basis are utilized. Treatment provided by the Department in the fiscal year 1957-58 consisted of 101,486 operations for 18,594 patients.

Training courses for Departmental dental surgeons in the various specialties of dentistry have been sponsored by the Department since 1948. Many Departmental dentists have given instructional clinics at various national and regional conventions, participated in the research programs of their respective hospitals, and assisted the dental colleges by part-time lecturing.

Prosthetic Services.—The administration of Prosthetic Services is now under the jurisdiction of the Director General of Treatment Services, assisted by a Prosthetic Services Advisory Committee consisting of medical, orthopaedic, and engineering authorities and a representative from the War Amputations of Canada.

The Services provide prosthetic and orthopaedic appliances as well as sensory aids to Canada's disabled veterans, and conduct a service for maintaining such appliances. Service is available to other departments and governments on a repayment basis. During the 1957-58 fiscal year, 71,485 patients received 135,723 appliances or repairs to appliances.

Twelve main centres and six sub-centres located in or near DVA hospitals or district offices are the points of contact for the disabled veterans and others requiring appliances and service. A factory located in Sunnybrook Hospital produces stock parts and is a central stores depot for the other centres. A research section at that hospital has made effective progress in the production of a mechanical hand and cosmetic glove, a roto-wrist below-elbow arm and a plastic above-knee shin. Work is also continuing on the above-elbow arm prosthesis with automatic locking device and shoulder suspension, the below-knee plastic prosthesis with solid-ankle cushion-heel foot and on other devices. Information is freely exchanged with prosthetic research workers in other countries, particularly the United Kingdom and the United States.

Section 2.—Rehabilitation of Veterans

The Welfare Services Branch of the Department of Veterans Affairs, in addition to administering the legislation authorizing rehabilitation benefits still available, provides advice regarding other welfare assistance that may be available to veterans and their dependants, widows, and orphans. The solving of the many and varied problems confronting the Branch requires the closest liaison with other federal government departments, with provincial and municipal government departments and with national and local welfare agencies.

War Service Gratuity.—The payment of war service gratuities was discontinued after Dec. 31, 1954, for World War II veterans, except for those with overseas service who could not apply before that date as a result of unusual circumstances. The amounts paid in gratuities up to the end of the fiscal year 1954-55 are shown in the 1956 Year Book, p. 306. Those paid subsequently and the cumulative totals were:—

<i>Fiscal Year</i>	<i>World War II Veterans</i>	<i>Special Force Veterans</i>
	\$	\$
1955-56.....	30,536	16,932
1956-57.....	9,457	7,351
1957-58.....	10,016	1,230
Totals to Mar. 31, 1958.....	470,022,048	6,690,052

Re-establishment Credit.—On Mar. 31, 1958, an amount of \$20,098,967 in re-establishment credit, out of nearly \$325,000,000, had not yet been authorized on behalf of the veterans entitled to it. These veterans have until Dec. 31, 1959, or 15 years after discharge, whichever is the later, to apply for their unused credit. The amounts paid during 1956-57 and 1957-58, and the cumulative totals to Mar. 31, 1958, by required purposes, are shown in Table 1.

1.—Re-establishment Credits Paid, by Required Purpose, Years Ended Mar. 31, 1957 and 1958, with Cumulative Totals to Mar. 31, 1958

Purpose	1957	1958	Cumulative Total to Mar. 31, 1958
	\$	\$	\$

Totals	2,103,261	1,581,167	304,360,081

Casualty Rehabilitation.—The function of the Casualty Welfare Division is outlined in the 1956 Year Book, p. 307. At the end of March 1958 there were 4,177 active cases. The total number of disabled veterans registered with the Division since its establishment was 45,418 and of these 41,241 were closed cases. Registrations during 1957-58 numbered 1,530 and cases closed numbered 2,899.

2.—Statistics re Registrations for Casualty Rehabilitation up to Mar. 31, 1958

Type of Disability	Active Cases as at Mar. 31	Total Closed Cases	Status	Registrants up to—

Social Services.—The Social Services Division provides a “case-work” service to veterans and their dependants, and a social welfare consultant service to other Departmental officials dealing with welfare matters. It maintains liaison, in the interest of veterans and their dependants, with welfare departments at all levels of government and with private social and philanthropic agencies.

The Division has certain responsibilities in connection with the operation of the Assistance Fund available to War Veterans Allowance recipients who are in need (*see* p. 292). At the request of the Department of National Defence it furnishes reports on home circumstances of Armed Forces personnel who request compassionate leave, posting or discharge. The latter service is often instrumental in providing help to those concerned through counselling and referral to community welfare services.

During the year ended Mar. 31, 1958, there were 15,226 requests for services from all sources, an 11-p.c. increase over the previous year.

Older Veterans.—During the year ended Mar. 31, 1958, emphasis continued on services to veterans and their dependants who, through age, merit special assistance in obtaining or retaining employment suitable to their abilities, or are unemployable. Increased War Veterans Allowance and Old Age Security rates, and extensions in the eligibility requirements of the WVA Act, enhanced the economic state of veterans dependent on these benefits. Building of suitable rental housing for elderly persons, sponsored by various levels of government and community organizations, resulted in a marked improvement in the accommodation available to many elderly veterans and their dependants.

Relaxation among employers of fixed hiring and retiring age policies was reflected during the winter unemployment among World War I veterans. At Mar. 31, 1958, 12,707 were registered for work, an increase of 2,118 over the same date of 1957. Most of these had unemployment insurance benefits, and WVA entitlement upon cessation of these benefits if re-employment placement did not occur. The Corps of Commissioners provided uniformed employment for 4,886 older veterans, 2,446 on Federal Government posts and the remainder on provincial, municipal, or private employer duties.

The Division reviews all rejected applications for War Veterans Allowance to ensure alternative services wherever possible, and works closely with all private and public bodies concerned with the welfare of the aged.

Assistance Fund.—Supplementary financial assistance is provided by the Assistance Fund to recipients under the War Veterans Allowance Act (*see* p. 298) who are in need. Assistance may be given as a continuing monthly grant in accordance with a formula which includes costs of shelter, fuel, food, clothing, personal care and certain health needs, or in single grants to meet needs not covered by the formula. During the two years ended Mar. 31, 1957, the maximum assistance available from the Fund was \$120 and \$144 per annum respectively to single and married recipients of WVA. These amounts were increased to \$240 and \$180 per year respectively as a result of the increases in rates and ceilings of the WVA Act which became effective on July 1, 1957. A further increase from \$180 to \$300 became effective Nov. 1, 1957, for married recipients of WVA.

Field work for the Fund is done almost entirely by the Welfare Services Branch which, through counselling and referral, also assists applicants in other ways. Since a monthly Assistance Fund grant may be continued without interruption until there is a change in the recipient's financial circumstances, the number of people assisted in any fiscal year is greater than the number applying during that period. Fund activity during the years ended Mar. 31, 1957 and 1958, was as follows:—

<i>Item</i>		<i>Years Ended—</i>	
		<i>Mar. 31, 1957</i>	<i>Mar. 31, 1958</i>
Persons assisted.....	No.	8,331	11,819
Persons applying during year.....	"	4,765	6,497
Applicants assisted.....	"	4,273	5,870
Proportion of applicants assisted.....	p.c.	90	90
Fund expenditures during year.....	\$	741,895	1,448,278
Proportion of expenditures given in monthly grants.....	p.c.	78	85
Persons in receipt of continuing monthly grants.....	No.	5,949	8,516

Education and Training.—Eligibility for training under the Veterans Rehabilitation Act and the Veterans Benefit Act, 1954, has lapsed except for disability pensioners and for a few programs delayed by personal illness. Still in training in universities at the end of March 1958 were 49 World War II veterans and 20 veterans of the Korean campaign. In vocational courses there were 19 and 12, respectively.

The Pensioners Training Regulations (P.C. 1955/134) provide training for pensioned veterans of World War I and for pensioned ex-members of Regular and Reserve Forces. Training must be designed to offset disability and to equip for available, suitable employment. At the end of the 1957-58 fiscal year seven such pensioners were in university courses and 12 were in vocational courses.

The Children of War Dead (Education Assistance) Act provides help with post-secondary school training for pensioned children of deceased veterans, whose deaths have been ruled by the Canadian Pension Commission to have been attributable to or incurred during war service. Eligible students who attend approved training institutions receive an allowance of \$25 a month if under age 21, and \$60 a month if over that age. Prescribed fees not exceeding \$500 for any one academic year may be paid on behalf of each student. Up to Mar. 31, 1958, 1,106 applications were approved under this Act.

Awaiting Returns Allowance.—The purpose of the Awaiting Returns Allowance is to assist in the maintenance of the veteran and his family during the early stages of a venture when the income therefrom is insufficient for that purpose. Because of the time limits imposed under the Veterans Rehabilitation Act, only veterans who settle under the Veterans' Land Act and who make application for the allowance within one year of such settlement are now eligible. The allowance is available for the period that the net income, plus the allowance, does not exceed the maximum rates—\$50 a month for a single veteran and \$70 a month for a married veteran (plus additional allowance for children)—up to 52 weeks.

Up to Mar. 31, 1958, 62,847 veterans, including 59 ex-members of the Special Force, were approved for the allowance and 90 p.c. were discontinued as established. The total amount expended on this benefit from inception to Mar. 31, 1958, was \$27,210,026 and at that date there were 147 active cases.

Vetcraft.—Sheltered employment for seriously disabled veterans was introduced into Canada in 1920 when the then Department of Soldiers' Civil Re-establishment and the Red Cross Society set up workshops for that purpose in several major Canadian centres. The purpose of the scheme was to provide temporary work, under nearly normal conditions, which would facilitate the return of these veterans to regular gainful employment.

The factories produced a wide variety of products which were sold in competition with similar products of industry. The enactment of the War Veterans Allowance Act in 1930 removed much of the need for sheltered employment as a welfare measure and, one by one, the shops closed. When World War II ended only those at Toronto and Montreal were in operation.

The manufacture of poppy emblems and memorial wreaths for Remembrance Day and other occasions was begun in 1923 and, since 1936, these products have constituted the entire output of the Vetcraft shops. Annual production is now worth around \$260,000 and provides full-time employment for 50 disabled veterans and widows in the Toronto and Montreal shops, plus part-time home assembly work for about 40 workers in Winnipeg, Regina and Calgary. The entire production is sold to Dominion Command of the Canadian Legion. The shops are under the administration of the Veterans Welfare Branch of the Department of Veterans Affairs.

Section 3.—Veterans Life Insurance

Returned Soldiers' Insurance.—This insurance, issued under the authority of the Returned Soldiers' Insurance Act, was available to veterans of World War I and no applications were accepted after Aug. 31, 1933. A brief summary of Returned Soldiers' Insurance appears in the 1956 Year Book. A change in the information contained therein was brought about by an amendment to the Act, effective Sept. 6, 1958. This amendment repealed the section which provided, in some instances, for the reduction of the amount payable on death in the event of an award to the insured's dependants under the Pension Act.

On Mar. 31, 1958, of the total of 48,319 policies issued there remained 10,714 policies in force with a face value of \$22,644,412. Of these policies, 2,912 were premium paying, 6,864 were paid-up, 142 had been converted to Extended Term Insurance, and 796 were being covered under the disability provision of the policy contracts. Terminations from 1920 to 1958 totalled 37,605, of which 11,955 were by death, 16,752 by surrender for the cash value and 8,898 by lapse, expiry or other mode of termination.

Veterans Insurance.—Eligibility to contract for Veterans Insurance, which had expired for many veterans of World War II, was extended by an amendment to the Veterans Insurance Act effective Sept. 6, 1958. They, together with veterans of the Korean action and certain other groups, may now apply for this insurance until Sept. 30, 1962. A brief summary of Veterans Insurance appears in the 1956 Year Book. An amendment, also effective Sept. 6, 1958, repealed a section of the Act which limited the payment of the proceeds of a policy in the event of death occurring during the premium paying term, and the award of a pension under the Pension Act on the insured's death.

Of 43,869 applications received up to Mar. 31, 1958, only 72 were declined for medical reasons. Of the 42,399 policies issued only 4.2 p.c. lapsed during the first two policy years, an unusually favourable lapse ratio. On Mar. 31, 1958, there were 28,778 policies in force with a face value of \$87,049,278. The death claim experience has followed a consistent pattern and is closely related to that observed for the general population.

3.—Death Claims Intimated, Years Ended Mar. 31, 1946-58, with Cumulative Totals 1921-45

Year Ended Mar. 31—	Returned Soldiers' Insurance		Veterans Insurance

Section 4.—Land Settlement and Home Construction

Veterans' Land Act.—The settlement of veterans of World War II and the Special Force under the Veterans' Land Act falls within four broad categories: farming or fishing, as a full-time occupation; part-time farming in rural or semi-rural areas to supplement income from other employment; settlement, in general on pioneer land, under agreements between the Federal Government and the provinces; and home building on city-size lots by veterans who have been approved for a loan under the National Housing Act and who act as their own contractors.

The amounts of financial assistance and the repayment terms differ for the various types of settlement. A veteran being settled as a full-time farmer on other than provincial land may obtain financial assistance under Part I of the Act to a maximum of \$6,000, including \$1,200 for livestock and farm equipment, and \$3,000 under Part III of the Act. Of the amount approved under Part I, exclusive of that for livestock and farming equipment, 10 p.c. is repayable as a down payment and 66⅓ p.c. is repayable with interest at 3½ p.c. over a maximum period of 25 years. The remaining 23½ p.c., together with the money expended for livestock and farm equipment, is not repayable provided the veteran complies with the terms and conditions of his contract for the first ten years thereof. Assistance under Part III is available on the basis of the veteran making a contribution of \$1 in cash or equivalent value for each \$2 lent, with the amount of the loan fully repayable with interest at the rate of 5 p.c.

Part-time farmers and commercial fishermen may obtain financial assistance up to \$6,000 under Part I and \$1,400 under Part III. The amounts repayable and the interest rates are similar to those for full-time farmers.

Veterans being settled on federal or provincial lands and Indian veterans being settled on Indian reserves may obtain financial assistance up to \$2,320, which is non-repayable provided they meet settlement terms and conditions for a period of ten years.

Under Part II of the Act, a qualified veteran who has been approved for a loan under the National Housing Act may receive financial and other assistance to build his own home on any lot suitable for a single family dwelling. The maximum financial assistance available is \$8,000 which, upon completion of the home, is repayable under a mortgage contract at the rate of interest chargeable under the National Housing Act.

The Veterans' Land Act Branch is organized into eight districts comprising 32 regional offices and 239 field areas across Canada. A resident field supervisor is responsible for each area and each supervisor has an average of 250 active accounts involving a gross initial public investment of close to \$1,500,000. There are also 92 construction supervisors

throughout the country whose main duties consist of giving practical advice and supervision to veteran-builders and inspecting the actual construction, remodelling or extension of homes and other buildings.

Each field supervisor is responsible for the sound appraisal of properties and the implementing of the Branch's supervised credit program through which veterans are assisted in the organizing and managing of their farms. A continuous and progressive on-the-job program of staff training is conducted to ensure that the supervisors keep abreast of the latest developments and newest techniques in land appraisal, farm organization, farm management and construction, with particular emphasis on the farm organization and credit requirements necessary for developing each unit to its highest and best use.

The Branch, through its field supervisors, commenced a comprehensive survey during the 1957-58 fiscal year of the progress and future credit requirements of full-time farming veterans already settled under the Act. A summary of the first 3,000 surveyed showed that the credit required to put their units on an economic basis averaged \$9,823. Of this, \$2,288 was the balance of the VLA contract debt still outstanding, \$839 represented credit presently extended from other sources, and \$6,696 was the amount of additional credit needed. As security for the total credit required by these veterans already settled, after expenditure of the additional credit needed, it was estimated that there would be resources available on the average of \$23,256.

While the summary of the first 3,000 surveyed disclosed the average total credit required to be \$9,823, the range was from nil to \$40,000 with the great majority being in the range of \$5,000 to \$20,000. Of the 3,000 surveyed, only 7.8 p.c. required total credit of over \$15,000, and only 2.1 p.c. required total credit in excess of \$20,000. The survey also indicated that, after expenditure of this additional credit and the reorganization of the enterprise where necessary, the average net annual income of these farmers, including allowances for rent of home and for farm perquisites, would be raised from the present average of \$3,291 to \$5,218, or by 58 p.c.

At the end of March 1958, 78,121 veterans had received financial assistance under the various types of settlement provided in the Act and a total of \$404,745,079 had been expended. Active accounts numbered 58,771 at Mar. 31, 1958, including 1,558 Indian veterans settled on Indian reserves whose accounts are administered by the Department of Citizenship and Immigration. During the fiscal year 1957-58, approvals for assistance were made on behalf of 2,820 veterans of World War II and the Special Force, including 443 for full-time farming, 1,690 for part-time farming, 28 for commercial fishing, 21 for settlement on Indian reserves, and 638 for home building on city-size lots. There were also 731 additional loans made to established full-time farmers under the provisions of Part III of the Act. These approvals involved the expenditure of more than \$20,000,000 in public funds during the year.

To Mar. 31, 1958, a total of 23,470 houses had been completed and another 1,424 were under construction. There were 1,656 houses completed in 1957-58, 1,414 new houses were started and another 911 veterans received approval to effect additions or improvements to their homes and other buildings.

A total of 4,260 appraisals were carried out during 1957-58, including 931 relating to applications for additional loans under Part III from full-time farming veterans already established. Also included were 386 appraisals made for other government departments and agencies, many of them involving properties of very considerable value with several approaching or exceeding \$1,000,000. From inception of operations under the Act, VLA field supervisors have made more than 100,000 appraisals.

During the fiscal year ended Mar. 31, 1958, \$12,497,869 became due under Veterans' Land Act contracts with veterans who paid, including prepayments, \$12,696,653. The excellent repayment record of the settled veterans is also shown by the fact that, on Mar. 31, 1958, less than 2 p.c. of the active accounts had arrears in excess of \$200, if on an annual or semi-annual payment basis, or \$100 if paying monthly. The total amount returned to the Treasury from current active accounts represents 106.5 p.c. of the total amount due

and owing in such accounts. Of the \$373,000,000 expended on behalf of 69,772 veterans established with repayable contracts in over 13 years of settlement operations up to Mar. 31, 1958, approximately 46 p.c. had been repaid. Included in this percentage was the amount of \$32,941,906, constituting conditional grants earned by 19,994 veterans who have fulfilled the terms of settlement for the first ten years of their contracts.

Of the \$117,589,077 expended relative to settlers under the Soldier Settlement Act, slightly over \$65,400,000, or 56 p.c., had been recovered up to Mar. 31, 1958, much of it through the resale of reverted properties.

One of the factors contributing to the very favourable repayment record of the VLA settlers is the fact that nearly 23,000 adopted one of the various pre-arranged repayment plans made available to them. There are 15,402 using the post-dated cheque plan, 6,416 have given orders on pensions or have made salary assignments and, at the end of March 1958, there were 1,017 share-of-crop agreements in effect in the spring wheat areas of the Prairie Provinces. In addition, 2,232 veterans have completely prepaid their contract debts and have only to fulfil the residence or personal operation requirements of their agreements for the remainder of their ten-year conditional grant periods in order to acquire title.

4.—Summary of Settlement and Expenditures under the Veterans' Land Act, as at Mar. 31, 1958¹

Section 5.—Pensions Advocates

Veterans Bureau.—The Veterans Bureau, which has completed its twenty-seventh year of operation, is a branch of the Department of Veterans Affairs and has an office under the direction of a District Pensions Advocate in all districts in Canada in which offices of the Department are situated.

During the year ended Mar. 31, 1958, 6,076 claims were submitted to the Pension Commission, with 8,378 in preparation at the end of the year. These figures represent a slight increase over the 5,861 claims submitted during the previous fiscal year and 8,103 in preparation at the end of the year.

The duties of Pensions Advocates, most of whom are lawyers, are to assist former members of the Armed Forces and their dependants and former members of the various auxiliary organizations, such as merchant seamen, firefighters and others, in preparing and submitting claims to the Canadian Pension Commission. They also appear as counsel for applicants before the Appeal Boards of the Commission. No charge is made for the services of the Bureau.

Section 6.—Veterans Pensions

Previous issues of the Year Book contain information on the development of Canadian pension legislation, together with yearly statistics of numbers and liabilities.

The Pension Act was amended by 6 Eliz. II, c. 19, which received Royal Assent on Dec. 20, 1957. The amendments incorporated into the Act the increase in pensions and attendance allowances which had been authorized effective July 1, 1957, by Vote 670 of the Supplementary Estimates for the fiscal year ended Mar. 31, 1958. The major amendments which resulted in increased benefits are as follows:—

- (1) Provision was made for the continuation of pension until the end of the month in which death occurs on the death of a disability pensioner who was in receipt of additional pension for a wife, child, or parent, or a widow who was in receipt of pension for herself and a child.
- (2) The Commission is given discretion to award housekeeper's allowance for the children of a widower who had maintained a home for his dependent children during his lifetime and whose children had been awarded pension as a result of his death if a home continues to be maintained for them.
- (3) Clothing allowance for leg amputations is increased from \$72 to \$96 per annum, for arm amputations from \$30 to \$42 per annum, and the maximum clothing allowance for pensioners who wear appliances that cause excessive wear and tear of clothing is increased from \$72 to \$96 per annum.
- (4) Allowances are increased for funeral and burial expenses which may be paid when a disability pensioner has died and his estate is not sufficient to pay the expenses of his last illness and burial. Now, \$150 may be paid for funeral services, \$50 for cemetery charges and \$50 for last illness expenses. Previously, the rates were \$110, \$25 and \$50 respectively.
- (5) The prohibition against the award of pension on behalf of widows of World War I veterans who had been married on or after May 1, 1954, is removed.
- (6) The prohibition against payment of additional pension for wives of World War I pensioners married on or after May 1, 1954, is removed and additional pension with respect to such marriages can therefore be paid effective Oct. 1, 1957, or from the date of marriage, whichever is the later date. Additional pension on behalf of the children of such marriages may also be paid with effect from Oct. 1, 1957, if the birth took place prior to that date, or from date of birth.

The annual pension rates for a 100-p.c. disability for all ranks up to and including that of Lieutenant-Colonel and equivalent ranks* are:—

Pensioner.....	\$1,800
Wife.....	600
First child.....	240
Second child.....	180
Each subsequent child.....	144

* Rates are slightly higher if the pensioner or the deceased veteran held the rank of Colonel or higher rank.

For assessments lower than 100 p.c., the awards are proportionately less.

Attendance allowance, which is payable to a pensioner who is totally disabled and in need of attendance, and which varies from a minimum of \$480 to a maximum of \$1,800 depending on the amount of attendance required, is paid in addition to pension.

The annual rates of pension for widows and children of all ranks up to and including that of Lieutenant-Colonel and equivalent ranks* are:—

Widow.....	\$1,380
First child.....	480
Second child.....	360
Each subsequent child.....	288

The Civilian War Pensions and Allowances Act provides for the payment of pensions to, or on behalf of, persons who served in certain civilian groups that were closely associated with the World War II war effort, and who suffered injury or death as a result of such service. These groups include merchant seamen, saltwater fishermen, auxiliary services personnel, ferry pilots of the RAF Transport Command, firefighters who served in the United Kingdom, etc.

6.—Pensions in Force under the Pension Act, as at Mar. 31, 1958

Service	Disability		Dependant		Disability and Dependant	
	Pensions in Force	Liability	Pensions in Force	Liability	Pensions in Force	Liability
	No.	\$	No.	\$	No.	\$
World War I.....	52,521	40,859,007	15,012	19,629,235	67,533	60,488,242

Peacetime.....	962	530,500	426	691,914	1,388	1,222,414
Special Force.....	1,484	793,412	156	192,475	1,640	985,887
Totals.....	158,049	108,586,429	33,576	40,226,006	191,625	148,812,435

Section 7.—War Veterans Allowances

War Veterans Allowances are payable, in Canada only, to Canadian veterans of the Northwest Field Force, the South African War, World Wars I and II, and the Korean operation; to veterans of Commonwealth and Allied Forces who were domiciled in Canada at time of enlistment, or alternatively, have resided in Canada for 10 years; and to widows or orphans of eligible veterans. To be eligible, a veteran must have served in a theatre of actual war and, if not, he must be in receipt of a pension for disability incurred on or aggravated by service of 5 p.c. or more of total disability or have accepted a final payment in lieu of pension of 5 p.c. or more. Other veterans who did not serve in a theatre of actual war and who are non-pensioners but who served in both World Wars I and II and were honourably discharged from both services are also eligible.

The development of these allowances is reported in previous issues of the Year Book; the main provisions of the present Act are outlined in the 1956 edition at pp. 313-314.

In 1957, Parliament approved certain increases in the rates of allowance payable and income ceilings, effective July 1, 1957. Additional changes became effective Nov. 1, 1957, including further increases in the rates of allowance and income ceilings; a change in the requirement of 20 years residence in Canada to 10 years for Commonwealth and Allied Forces; and establishing eligibility from a service standpoint for Canadian veterans who served in England during World War I for at least 365 days prior to Nov. 12, 1918.

* Rates are slightly higher if the pensioner or the deceased veteran held the rank of Colonel or higher rank.

The rates of allowances payable and income ceilings now in effect are as follows:—

<i>Recipient</i>	<i>Monthly Maximum Allowance</i>	<i>Annual Income Ceiling</i>
	\$	\$
Veterans and widow(er)s, single status.....	70	1,080
Veterans and widow(er)s, married status.....	120	1,740
Veterans with blind spouse.....	120	1,860
One orphan.....	40	720
Two orphans of one veteran.....	70	1,200
Three or more orphans of one veteran.....	85	1,440

The number of veterans and others in receipt of allowances at the close of each of the fiscal years 1952-58 and the amounts of allowances paid are as follows:—

<i>As at Mar. 31—</i>	<i>Veterans in Receipt of Allowances</i>	<i>Others in Receipt of Allowances</i>	<i>Total in Receipt of Allowances</i>	<i>Expenditure</i>
	No.	No.	No.	\$
1952.....	29,137	9,602	38,739	23,544,760
1953.....	30,005	10,607	40,612	27,114,849
1954.....	30,650	11,737	42,387	26,486,988
1955.....	32,471	12,883	45,354	27,702,077
1956.....	37,930	14,257	52,187	38,648,988
1957.....	39,691	15,502	55,193	40,975,483
1958.....	42,705	17,242	59,947	47,763,671

During the 1957-58 fiscal year, 63,078 cases were reviewed by the 18 District Authorities across Canada, and 19,794 by the War Veterans Allowance Board in Ottawa, so that changes in the financial, physical or domestic circumstances of the recipients concerned might be reflected in the allowance being paid. Of the 366 decisions appealed during the year, 49 were allowed and 317 disallowed.

Section 8.—Veterans Commissions and Boards

Canadian Pension Commission.—The Canadian Pension Commission is a statutory body charged with the administration of the Pension Act and the Civilian War Pensions and Allowances Act. The members of the Commission are appointed by the Governor in Council who may also impose upon the Commission duties in respect of any grants in the nature of pensions, etc., made under any statute other than the Pension Act. It reports to Parliament through the Minister of Veterans Affairs.

It is the responsibility of the Commission to adjudicate on claims for injury or disease resulting in disability or death, incurred during service with the Canadian Navy, Army or Air Force during war or peacetime. The Commission may also supplement certain awards of pension made by the British or Allied Governments (*see* 1956 Year Book, p. 304).

The Commission's representatives, called Pension Medical Examiners, are located in most of the district offices of the Department of Veterans Affairs across the country.

War Veterans Allowance Board.—The War Veterans Allowance Board is a statutory body responsible for the administration of the War Veterans Allowance Act. The members are appointed by the Governor in Council and the Board reports to Parliament through the Minister of Veterans Affairs.

The administration of the Act has been almost completely decentralized through 18 District Authorities located in the district offices of the Department of Veterans Affairs across Canada. These Authorities make the initial decisions on WVA applications and arrange for the necessary investigations to be made by officers of the Veterans Welfare Services Branch.

The Board, which is located in Ottawa, defines policy, standardizes administrative procedures and reviews decisions of the District Authorities, either to adjudicate appeals from decisions of the Authorities or to assure the consistent administration of the Act throughout Canada.

Imperial War Graves Commission.—All Commonwealth Governments are members of the Commission, incorporated by Royal Charter in 1917, and are represented by their High Commissioners in London. The Commission is entrusted with the marking and maintenance, in perpetuity, of the graves of those of the British Empire and Commonwealth Armed Forces who lost their lives between Aug. 4, 1914 and Aug. 31, 1921, and between Sept. 3, 1939 and Dec. 31, 1947. The Commission erects memorials to commemorate those with no known grave. The Minister of Veterans Affairs is the Agent of the Commission in Canada and the office of the Secretary-General of the Canadian Agency is in the Veterans Affairs Building, Ottawa.

The area of responsibility of the Canadian Agency is the Continent of North America but it has also certain duties of inspection in Argentina, Bahamas, Barbados, Bermuda, Brazil, British Guiana, British Honduras, Chile, Costa Rica, Cuba, Falkland Islands, French West Indies, Guatemala, Hawaiian Islands, Jamaica, Leeward Islands, Netherlands Antilles, Panama Canal Zone, Peru, Puerto Rico, Trinidad, Uruguay, and Windward Islands.

In North America the Agency is responsible for about 13,000 War Graves in over 2,000 cemeteries. Approximately 3,300 servicemen of both wars, missing in operations while based in North America, are commemorated on the memorials erected at Victoria, B.C., and at Halifax, N.S.

Construction started late in 1958 on a memorial in Ottawa commemorating by name approximately 800 Commonwealth Air Forces servicemen who lost their lives in the Second World War while on operations from bases in Canada and the United States, and who have no known grave.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—Canadian Criminal Law and Procedure†

The system under which justice is administered in a State is never rigid. To have it so would be neither expedient nor indeed possible. A judicial system must grow and adapt itself to the requirements of the people and the exact limits of the powers of different legislative bodies require continued definition.

The criminal law of Canada has as its foundation the criminal common law of England built up through the ages and consisting first of customs and usages, and later expanded by principles enunciated by generations of judges. There is no statutory declaration of the introduction of English criminal law into those parts of Canada that are now the Provinces of New Brunswick, Nova Scotia and Prince Edward Island. Its introduction there depends upon a principle of the common law itself by which English law was declared to be in force in uninhabited territory discovered and planted by British subjects, except in so far as local conditions made it inapplicable. The same may be said of Newfoundland although the colony dealt with the subject in a statute of 1837. In Quebec its reception depends upon a Royal Proclamation of 1763 and the Quebec Act of 1774. In each of the other provinces and in the Yukon and Northwest Territories the matter has been dealt with by statute.

The judicial systems of the provinces as they exist today are based upon the British North America Act of 1867. Sect. 91 of the Act provides that "The exclusive legislative authority of the Parliament of Canada extends to . . . the criminal law, except the constitution of courts of criminal jurisdiction but including the procedure in criminal matters". By Sect. 92 (14), the legislature of the province exclusively may make laws in relation to

* Except as otherwise credited, this Chapter has been revised in the Judicial Section, Health and Welfare Division, Dominion Bureau of Statistics.

† Prepared by the Criminal Law Section, Department of Justice, Ottawa.

"the administration of justice in the province, including the constitution, maintenance and organization of provincial courts, both of civil and criminal jurisdiction and including procedure in civil matters in its courts". The Parliament of Canada may, however, (Sect. 101) establish any additional courts for the better administration of the laws of Canada. It should be noted that the Statute of Westminster, 1931, effected important changes particularly by abrogating the Colonial Laws Validity Act, 1865 (U.K.), and confirming the right of a dominion to make laws having extraterritorial operation. Particulars of the federal judiciaries are given in Chapter II, pp. 76-78 and provincial judiciaries are dealt with briefly at p.78, more detailed information on provincial judiciaries is given in the 1954 Year Book, pp. 48-55.

At the time of Confederation each of the colonies affected had its own body of statutes relating to the criminal law. In 1869 in an endeavour to assimilate them into a uniform system applicable throughout Canada, Parliament passed a series of Acts some of which dealt with offences of special kinds and others with procedure. Most notable of the latter was the Criminal Procedure Act, but other Acts provided for the speedy trial or summary trial of indictable offences, the powers and jurisdiction of justices of the peace in summary conviction matters and otherwise, and the procedure in respect of juvenile offenders.

Codification of the criminal law through a Criminal Code Bill founded on the English draft code of 1878, Stephen's *Digest of Criminal Law*, Burbidge's *Digest of the Canadian Criminal Law*, and the relevant Canadian statutes was brought about by the Minister of Justice, Sir John Thompson, in 1892. This Bill became the Criminal Code of Canada and came into force on July 1, 1893. It must be remembered, however, that the Criminal Code was not exhaustive of the criminal law. It was still necessary to refer to English law in certain matters of procedure and it was still possible to prosecute for offences at common law. Moreover, Parliament has declared offences against certain other Acts, e.g., the Opium and Narcotic Drug Act, to be criminal offences and the same was done in the Defence of Canada Regulations and the Wartime Prices and Trade Board Regulations (neither now in force) promulgated under the authority of the War Measures Act.

It is often difficult to distinguish between 'law' and 'procedure'. Procedure may be interpreted to relate simply to the organic working of the courts but, in a wider sense, it may also affect the rights or alter the legal relations arising out of any given state of facts. For present purposes it will be useful to note that writers on jurisprudence describe law as being substantive or adjective. "Substantive law is concerned with the ends which the administration of justice seeks; procedural (adjective) law deals with the means and instruments by which these ends are to be obtained."* With reference to the criminal law the former may be taken to include the provisions concerning criminal responsibility, the definition of 'offences' and the punishment for those offences, and the latter to include provisions for enforcement, e.g., powers to search and to arrest, for the modes of trial and for the proof of facts. Broadly speaking, the Criminal Code observes the distinction although it might appear that the provisions for preventive detention of habitual criminals and criminal sexual psychopaths partake of the nature of both classes.

An examination and study of the Criminal Code was authorized by Order in Council dated Feb. 3, 1949, and the Commission assigned the task of revising the Code presented its report with a draft Bill in February 1952. After coming before successive sessions of Parliament it was finally passed on June 15, 1954, and the new Criminal Code (2-3 Eliz. II, c. 51) came into effect on Apr. 1, 1955. A short outline of the system that existed under the repealed Code together with the major revisions effected by the new Code is given in the 1955 Year Book, pp. 295-298.

Since the Code came into force amendments have been few and of minor importance. An amendment relating to race meetings was passed in 1955 and in 1956 it was provided that motions for leave to appeal to the Supreme Court of Canada in criminal cases should be heard by a quorum (at least five) of the judges of that Court instead of by a single judge.

* Salmond on *Jurisprudence*, 7th Edition, p. 496.

The Parole Act (S.C. 1958, c. 38) was passed to implement certain recommendations of the Committee appointed in 1953 under the chairmanship of the Hon. Mr. Justice Fauteux, to inquire into the principles and procedure followed in the Remission Service of the Department of Justice. The Act repeals the Ticket of Leave Act and provides for the establishment of a National Parole Board. It is to come into force on proclamation and will have considerable effect on the administration of the penal provisions of the criminal law. However, it does not directly affect the Criminal Code except in so far as it will empower the Board to revoke or suspend a sentence of whipping or an order made under the Criminal Code prohibiting a person from operating a motor vehicle, and will transfer to the Board the powers, functions and duties of the Minister of Justice in relation to the review of sentences of preventive detention.

Section 2.—Adult Offenders and Convictions

The main interest in adult criminal statistics is concerned with those persons guilty of the more serious crimes. Such offenders are fewer than those who commit summary conviction offences but, from the standpoint of the protection of society, they are more important.

Statistics of indictable crimes are based on *persons*. When a person is prosecuted at the same hearing for several offences, one of those offences is selected for tabulation. The rule followed is to select the offence for which the proceedings were carried to the furthest stage—to conviction and sentence if the prisoner were tried on several charges; if there were several convictions, the offence selected is that for which the heaviest punishment was awarded; if the final result of proceedings on two or more charges were the same, the most serious offence (as measured by the maximum penalty allowed by the law) appears in the tables. Where a person was prosecuted for one offence and convicted of another (e.g., charged with murder and convicted of manslaughter), the case appears only under the offence for which he was convicted. Statistics of summary conviction offences are based on *convictions*.

The figures include only cases finally determined within the year. Those not entirely disposed of within the year (e.g., tried but sentence postponed) are held over for the next year's report.

The new Criminal Code, which became law in 1954 (S.C. 1953-54, c. 51), necessitated the alteration of certain statistical classifications. For instance, in the classification of indictable offences regroupings have been made and some items added and others dropped. Also, indictable offences under the Criminal Code are now shown separately from those under federal statutes. Summary convictions are now classified under offences under the Criminal Code, federal statutes, provincial statutes and municipal by-laws, and methods of trial have been arranged to conform with the provisions of the new Criminal Code. Thus, any comparisons between these data for 1956 and 1957 and the data published for previous years should be made with care. Each table in the following statistical analysis in which revision of classification occurs carries a headnote to that effect.

Subsection 1.—Adults Convicted of Indictable Offences

During 1957 the courts of Canada dealt with 35,458 adults charged with 61,964 indictable offences, of whom 31,765 were found guilty of 54,900 offences. These figures show an increase over those of 1956 when 30,838 adults were charged with 52,541 indictable offences and 27,413 were found guilty of 45,913 offences.

1.—Persons Convicted of Indictable Offences, with Ratio per 10,000 Population 16 Years of Age or Over, by Province, 1956 and 1957

¹ Per 10,000 population 16 years of age and over excluding the Yukon and Northwest Territories.

Indictable offences are divided into the main sources of the criminal law—the Criminal Code and Federal Statutes. Indictable offences under the Criminal Code are grouped into six classes as shown in Table 2. In 1957 persons convicted of assaults of various kinds and obstructing police represented 78.5 p.c. of Class I, which covers offences against the person. In that year 8 persons were convicted of murder, 10 of attempted murder and 110 of manslaughter as compared with 10, 4 and 84 respectively in 1958.

Classes II to V deal with offences against property. Thefts predominate among the offences in these classes, and breaking and entering and robbery, serious crimes which involve acts of violence, are the next most numerous. In Class VI, which includes miscellaneous offences, the most numerous convictions are for offences connected with the improper operation of motor vehicles. In 1957 there were 400 offenders under the Opium

and Narcotic Drug Act, of whom 274 were convicted of possessing heroin and 84 of trafficking; 285 were males and 356 were born in Canada. British Columbia courts convicted 64.5 p.c. of the drug offenders and Ontario courts 26.8 p.c.

2.—Adults Charged and Convicted of Indictable Offences, by Class of Offence, 1956 and 1957

NOTE.—Classifications in this table have been changed in accordance with alterations in the Criminal Code (see p. 303) and are therefore not strictly comparable with those published for previous years.

Female Offenders.—There were 1,762 female offenders convicted of indictable offences in 1957, 37.7 p.c. of whom were in Ontario, 15.4 p.c. in British Columbia and 15.0 p.c. in Quebec. Of the total females convicted in that year, 48.1 p.c. were found guilty of theft and having in possession, 9.0 p.c. of various assaults and 8.6 p.c. of false pretences and fraud.

4.—Females Convicted of Indictable Offences, by Province, 1956 and 1957

Disposition of Cases and Recidivism.—Of all suspects before the courts for indictable offences in 1957, 89.6 p.c. were adjudged guilty; the convictions against males (89.8 p.c.) constituted a higher percentage than those against females (86.3 p.c.) and varied considerably between provinces. Prince Edward Island and New Brunswick showed the highest percentage (97.5 p.c.) of convictions and Nova Scotia the lowest (84.4 p.c.).

Sentences.—In 1957, 28.2 p.c. of the persons convicted of indictable offences were fined, 32.4 p.c. were sent to gaol without option of fine, 6.1 p.c. were committed to reformatories and 7.3 p.c. to penitentiaries, and 26 p.c. were given suspended sentences with or without probation. One habitual criminal was given preventive detention, one person received a life sentence and eight were given the death penalty. The proportions in 1957 were much the same as in recent preceding years.

Court Proceedings.—In 1957, 65.1 p.c. of the persons tried by a judge and jury were convicted; trials by a judge without a jury brought convictions in 72.3 p.c. of the cases so tried; trials by a magistrate with consent ended in convictions in 91.5 p.c.; and those by a magistrate who has absolute jurisdiction, in 90.6 p.c. of the cases. Of the persons charged with an indictable offence, 92.8 p.c. were tried by magistrate or juvenile and family courts, 4.5 p.c. in county and district courts and 2.7 p.c. in higher courts.

9.—Method of Trial of Persons Charged with Indictable Crimes, showing Disposition of Cases, by Sex and by Province, 1956 and 1957

NOTE.—Classifications in this table have been changed in accordance with alterations in the Criminal Code (see p. 303) and are therefore not strictly comparable with those published for previous years.

Subsection 2.—Young Adult Offenders (16-24 Years)

Young men and women from 16 to 24 years of age form 47.8 p.c. of the criminal population who commit indictable offences but they comprise less than 21.9 p.c. of the total population 16 years of age or over. As this age group includes some of the most daring offenders who may be already experienced criminals as well as first offenders likely to be turned from crime by further education and training, it seems worthwhile to give consideration to offenders in this group as distinct from offenders in the older age groups.

Of the young offenders in 1957, 57.1 p.c. were still under 20 years of age and 70.9 p.c. were tried in three provinces—Ontario 36.4 p.c., Quebec 21.1 p.c., and British Columbia 13.4 p.c.

In 1957, four of the eight men found guilty of murder, 31 of the 108 convicted of manslaughter and 38 of the 56 found guilty of rape were under 25 years of age; 65.8 p.c. of the men convicted of breaking and entering, extortion and robbery were in that group as well as 56.4 p.c. of those found guilty of offences against property without violence (which include all thefts), 53.8 p.c. of those who maliciously damaged property, 51 p.c. of those found carrying offensive weapons and 47.3 p.c. of the prison escapees.

There were 1,762 female offenders in 1957, 683 of them under 25 years of age; more than half (362) of the young offenders were guilty of theft and having in possession. Of the 115 women convicted under the Opium and Narcotic Drug Act, 33 were in the young adult group as were 29 of the 63 convicted of forgery and uttering; 19 of the 24 female prison escapees were also young women.

12.—Young Adult Offenders Convicted of Indictable Offences, by Class of Offence and Sex, 1956 and 1957

NOTE.—Classifications in this table have been changed in accordance with alterations in the Criminal Code (see p. 303) and are therefore not strictly comparable with those published for previous years.

Table 13 shows the proportions of young offenders per 100,000 population in three age groups.

13.—Numbers per 100,000 Population of Young Adults Convicted of Indictable Offences, by Age Group, 1956 and 1957

Age Group	1956			1957		
	Offenders	Per 100,000 Population in Respective Group	Change from Preceding Year	Offenders	Per 100,000 Population in Respective Group	Change from Preceding Year
	No.		p.c.	No.		p.c.
16 - 17 years.....	3,455	742	+26.0	4,662	958	+34.9
18 - 19 ".....	3,062	683	+ 8.8	4,007	860	+30.9
20 - 24 ".....	5,848	518	- 0.5	6,526	561	+11.6

The sentences meted out to these young people vary somewhat from those given to offenders over 24 years of age. Usually a higher proportion of them are given suspended sentences, put on probation or sent to reformatories and a lower proportion fined or given gaol sentences.

14.—Disposition of Sentences for Indictable Offences, by Sex, 1956 and 1957

Disposition of Sentences	1956				1957			
	16-24 Years		25 Years or Over		16-24 Years		25 Years or Over

Penitentiary.....	777	12	1,216	28	859	10	1,426	40
Death.....	2	—	8	—	4	—	4	—

Through the system of suspended sentence and probation supervising, many young offenders receive another chance to make good, and reformatory training gives others an opportunity to better their employment possibilities. It is interesting to note that 24.2 p.c. of the young male offenders in 1957 were recorded as labourers, indicating that they had no particular skill by which to earn a living; the proportion of male offenders 25 years or over recorded as labourers was 17.4 p.c. Those recorded as students made up 7.9 p.c. of the youths and 9.6 p.c. were reported as unemployed as compared with 2.9 p.c. of the older men. Approximately three of every four lived in urban centres.

Subsection 3.—Convictions for Summary Conviction Offences

Offences punishable on summary conviction—those not expressly made indictable—include all offences against the Criminal Code, provincial statutes and municipal by-laws. Summary conviction offences are triable by magistrate or justice of the peace under Part XXIV of the Criminal Code or under the provincial summary convictions Acts.

It is debatable how far summary conviction offences are of a criminal nature and whether their increase indicates an increase in crime. Many are breaches of municipal by-laws and contrary to public safety, health and comfort as, for example, parking violations or practising trades without licence, but they do not involve violence, cruelty or serious dishonesty. On the other hand, offences as serious as cruelty to animals and contributing to juvenile delinquency are included under this classification and such indictable offences as common assault and driving with ability impaired may be tried on summary conviction.

Summary convictions increased by 2.7 p.c. to 2,466,762 in 1957 from 2,401,730 in 1956. Decreases were shown in Prince Edward Island, Nova Scotia, Quebec and Ontario.

15.—Convictions for Summary Conviction Offences, by Province, 1948-57

NOTE.—Figures for years before 1951 are for the 12 months ended Sept. 30, 1951; those for 1952-57 are for the calendar year. Statistics for the intervening months, October-December 1950, are given in DBS report, *Statistics of Criminal and Other Offences*. Figures for 1900-47 are given in the corresponding table of previous Year Books beginning with the 1933 edition.

In considering statistics of summary convictions it should be remembered that such convictions are greatly influenced by the customs of the people and by the application and degree of enforcement of municipal regulations. These differ from place to place and from year to year and affect summary conviction offences more than they do indictable offences.

In 1957, increases appeared in convictions under the Criminal Code (17.2 p.c.), federal statutes (10.5 p.c.) and provincial statutes (0.3 p.c.). Traffic regulations under provincial statutes and municipal by-laws rose by 1.7 p.c.

16.—Convictions for Summary Conviction Offences, by Type, 1956 and 1957

NOTE.—Classifications in this table have been changed in accordance with alterations in the Criminal Code (see p. 303) and are therefore not comparable with those published for previous years.

Type of Offence	1956	1957	Increase or Decrease 1956-57
	No.	No.	p.c.
Criminal Code—			
Bawdy house, frequenters, inmates.....	565	900	+59.3
Causing disturbance by being drunk.....	4,293	3,883	- 9.6
Common assault.....	5,292	6,521	+23.2

1957.....	10,629	1,585	11,493	35,004	438,331	1,268,616	41,646	77,808	55,238	227,533	298	2,168,181

For the year 1957, Ontario, with 40.2 p.c. of the registrations of motor vehicles in Canada, had 58.5 p.c. of the total convictions for breaches of traffic regulations; Quebec in the same year had 19.8 p.c. of the registered vehicles and 20.2 p.c. of the convictions. In interpreting the figures in this way, however, it should be pointed out that traffic regulations are by no means uniform throughout Canada and no account is taken of the differences in the degrees of urbanization in the provinces. These two provinces have large urban centres but in provinces with lower degrees of urbanization, such as the Atlantic Provinces, Saskatchewan and Alberta, convictions are lower when considered in proportion to the number of motor vehicles registered.

Convictions for Drunkenness and Offences against the Liquor Acts.—In considering these convictions it should be noted that the same person may and often does appear before the courts on such charges more than once within a year and that the number of convictions may thus be well above the number of persons convicted.

18.—Convictions for Drunkenness, by Province, 1948-57

NOTE.—See headnote to Table 15, p. 316.

There is general interest in the relation of alcoholism to crime but, when examining statistics to support the assumption that some crimes are associated with the consumption of liquor, it should be observed that accurate interpretation would necessitate allowance for population variables such as age and sex distribution and other classifications according to social and economic status, etc.

Convictions of Females.—The number of convictions against females for summary conviction offences was lower in 1957 than in 1956 by 2.3 p.c. Quebec, Nova Scotia, Prince Edward Island and Saskatchewan recorded percentage decreases of 57.4, 42.1, 30.1 and 25.8, respectively. Traffic offences were the cause of 84.6 p.c. of all summary convictions against women in 1957; such convictions fell by 5.2 p.c. as compared with 1956.

Section 3.—Juvenile Delinquents

The Juvenile Delinquents Act defines a child as "any boy or girl apparently or actually under the age of 16 years". Provision is made, however, by which the Governor General in Council may proclaim that in a province the definition of a child be a "person under the age of 18 years". This has been done in British Columbia, Manitoba and Quebec. Newfoundland considers a juvenile to be a girl or a boy of under 17 years of age. For uniformity the figures relating to juveniles compiled by the Dominion Bureau of Statistics refer to the younger ages of under 16 years only and deal primarily with cases disposed of by the courts.

The fact that juvenile court statistics furnish the most comprehensive figures collected on a countrywide basis makes it important that their possibilities and limitations be understood. This Section gives an account of juvenile delinquency in Canada from the viewpoint of legal action taken, for in the eyes of the law a *child is a delinquent only when he or she is adjudged before the court to have committed a delinquency*. To many people the term 'juvenile delinquent' has a broader interpretation but that adopted in this Section does not include those boys and girls whose misdemeanours have not been reported to the courts nor those given the necessary advice and aid from their parents, their school, the police or a child care agency. Moreover it does not include those cases that are handled unofficially by the court, where the judge or probation officer makes an adjustment without filing a legal record of the offence. The tendency to follow this practice and thus keep children's names from court records is growing and may account to some extent for the decreasing number of recorded court cases.

These statistics represent cases of delinquency reported to the courts, from the most trivial infractions to the most serious—that of murder. The number of cases brought before the courts is influenced by such factors as personnel and facilities of the court, community

interest in and understanding of the function of a juvenile court, and by variations in the policies of the courts in the disposition of cases. As more courts are established the additional returns may exaggerate an apparent increase in delinquency or may underestimate a decrease. In some communities the juvenile court is the only available agency to provide services to children; in others there are well established agencies serving children of which the juvenile court is only one.

It should be noted, too, that the total figures do not represent the actual number of children charged and found guilty but rather tend to exaggerate them, for a child referred to the court two or more times during the year for different offences is counted as a different case each time (*see* p. 326). Neither do the figures represent the number of offences committed by offenders, as when a child is charged with more than one delinquency at a hearing only the most serious offence is counted.

Reports of juvenile delinquents were received in 1957 from 150 of the 169 judicial districts. Nineteen of these had no cases to report. Separate reports were received in 1957 from 173 incorporated urban centres of 4,000 or more population.

Juveniles brought before the Courts.—The number of juveniles brought before the courts in 1957 was 11,928, an increase of 15.6 p.c. over 1956. Quebec, Manitoba and British Columbia showed the greatest percentage increases among the provinces.

Children Adjudged Delinquent.—Over a period of ten years it has been found that between 80 and 90 p.c. of the children brought before the courts each year have been adjudged delinquent. The number of delinquents in 1957 was 9,679, an increase of 7.7 p.c. over 1956. The major increases in 1957 were shown in British Columbia and Quebec.

Offences.—Thieving is the most prevalent delinquency among boys and, together with receiving stolen goods, was the reason for court appearance in 41.0 p.c. of all cases in 1957. Breaking and entering and robbery were committed by 23.0 p.c. of the delinquent boys and another 11.1 p.c. committed wilful acts against property. Only 2.8 p.c. of the boys were guilty of offences against the person and 43.9 p.c. of these were charged with common assault.

Incorrigibility (23.8 p.c.) and thefts (20.2 p.c.) were the complaints against 44.1 p.c. of the delinquent girls in 1957.

Totals.....	6,377	6,332	7,025	8,985	9,679

Sex and Age.—Juvenile delinquents are predominantly boys. The proportion for all offences in 1957 was approximately one girl to eight boys, a ratio that has remained much the same over a long period. Juveniles of 13 to 15 years of age comprised the majority of delinquents in 1957—75.8 p.c. of the boys and 88.0 p.c. of the girls. However, 346 boys and 12 girls (3.7 p.c. of the children) were under 10 years of age.

28.—Percentages of Delinquent Boys and Girls, by Age Group, 1956 and 1957

Totals.....	100.0	100.0	100.0	100.0	100.0	100.0

Education and Employment.—Many causes contribute to backwardness in school work. The retarding influence may be illness, over-crowding in the home, disturbed family situations or dull mentality. Presuming that six years is the usual age for entering the first grade, 47.7 p.c. of the boys and girls in 1957 were reported to be two or more years below the normal grade for their age and 3.4 p.c. of the boys and girls were a year or more above it.

Nearly two-thirds (62.5 p.c.) of the boys had attained grade 7 and 52.0 p.c. of the girls grade 8 at the time of delinquency. The majority of boys who had left school had reached grades 6 to 8 and the girls, grades 7 to 9. Some high school education had been achieved by 24.4 p.c. of the boys and girls.

In 1957, 8.8 p.c. of the delinquent boys and 12.2 p.c. of the delinquent girls were not attending school. At the time of leaving school their ages ranged from 9 to 15 years, the majority being 14 to 15 years. One-third of the delinquent boys who had left school were unemployed. The largest group of wage earners (90) were in occupations concerned with transportation, such as messengers, helpers on milk delivery routes, truck drivers' assistants, etc. Nearly half of the girls were idle after leaving school. Factory work and domestic and personal services were the main occupations of those employed.

Birthplaces of Juvenile Delinquents and their Parents.—Canada was the country of birth of 93.2 p.c. of the juvenile delinquents in 1957 (the place of birth was not recorded in 1.4 p.c. of the cases); 5.4 p.c. were born in the British Isles, Europe, the United States, and Asia. Ontario was the province of residence of 52.9 p.c. of those born outside Canada.

Both parents of 78.5 p.c. of the delinquent children in 1957 were born in Canada and another 10.6 p.c. had one parent born in this country. To evaluate these figures comparison should be made of population ratio of children from 7-15 years of age whose parents were Canadian-born with those whose parents were born elsewhere.

Home Circumstances.—The type of home in which he lives and the amount and quality of supervision he receives are important factors in a child's behaviour. The statistics of the marital status of the parents and the place and type of residence of the child reflect home conditions and are worth recording as possible reasons for social or emotional maladjustment. The parents of 77.0 p.c. of the delinquent children were

reported to be living together in 1957 but homes broken by separated parents, divorce or death was the background of 19.9 p.c. of the delinquent boys and girls. The mothers of 13.0 p.c. of the juvenile delinquents were employed other than in the home and the mothers of another 2.2 p.c. were dead. The fathers of 6.3 p.c. of the cases were deceased. Of every five juveniles who appeared in court, four were urban residents; 91.5 p.c. were living in their own homes at the time they got into difficulties; 4.3 p.c. of them were in foster homes, either with a relative or some other person; and institutions were the homes of 1.3 p.c. of them.

Sources of Complaint.—The police were the complainants in the majority of juvenile cases, 83.9 p.c. of the boys having been charged by them. Probation officers and parents were responsible for 6.0 p.c. and 2.5 p.c., respectively, of those charged. School authorities referred 1.6 p.c. of the boys to the courts and social agencies another 0.6 p.c.

The proportion (59.9 p.c.) of girls charged by the police was considerably less than the proportion of boys so charged. Parents made more use of the courts for girls than for boys (17.2 p.c.). School authorities laid complaints in 5.8 p.c., probation officers in 8.9 p.c. and social agencies in 4.0 p.c. of the girls' cases.

Disposition of Cases.—In 1957 not quite one-half of the children's cases (44.3 p.c.) were heard within four days of the charge and (64.2 p.c.) within nine days. However 10.7 p.c. of them had to wait at least two weeks and 11.2 p.c. waited a month or more before the first hearing. These waiting periods may be explained in various ways.

Some county courts sit only twice or even once a month. Hearings may be deferred because of sickness in the family, school examinations, stormy weather or long distances. The chief cause for delay, however, is the time it takes to investigate the facts properly. The probation officer, and frequently there is only one to a court, has to find out what occurred at the time of the delinquency; he must get in touch with the parents and the school, learn something of the home situation, perhaps arrange medical or psychiatric examinations and explore community resources. The disadvantage of a long waiting period is outweighed by the assistance the court receives in deciding the form of treatment best suited to the child's needs and the type of care that will be the most economical for the community. For these intervening days or weeks most children are left in their own homes while a minority are placed in detention homes and, in the long run, whether the effect of the waiting period is good or bad is determined by the care given the youngster during that time.

Juvenile court judges heard 94.0 p.c. and magistrates 5.6 p.c. of the juvenile cases before the courts. The balance were heard by justices of the peace. The proportion of those declared delinquent (95.2 p.c.) in the magistrates' courts was greater than in the juvenile courts (80.3 p.c.). In the former courts 2.1 p.c. of the cases were dismissed while in the juvenile courts only 2.8 p.c. were dismissed but 16.9 p.c. were adjourned *sine die*.

Some courts consider children whose hearings are adjourned *sine die* as delinquent while others do not but, for the sake of uniformity, the latter point of view is maintained by the Dominion Bureau of Statistics. In assessing the total problem of juvenile delinquency, however, cases adjourned *sine die* have to be taken into account for, when the proportion of cases dealt with in this way increases, the proportion of those declared delinquent declines.

30.—Juveniles before the Courts, Dismissed and Delinquent, 1953-57

Sentences for delinquent boys usually differ somewhat from those for girls. In 1957 the proportion of boys put on probation was 42.5 p.c. and of girls 45.0 p.c. Fines or restitution were meted out to 25.0 p.c. of the boys but to only 11.5 p.c. of the girls. This is because damage to property, for which restitution seems a reasonable adjustment, is committed relatively more often by boys than by girls. A much larger proportion of girls (29.4 p.c.) than boys (14.3 p.c.) were sent to training schools. Final disposition of case was postponed for 10.0 p.c. of the girls and 12.8 p.c. of the boys were given suspended sentences.

Actual Number of Delinquent Children.—As stated in the introduction to this Section, the figures in the foregoing tables do not represent the actual number of children charged and found guilty, since a child referred to the court more than once in a year is counted as a separate case each time. Thus the 11,928 appearances before the court in 1957 (Table 23), which resulted in 9,679 delinquencies (Table 25), involved 8,811 children. Of these 8,811 children, 8,075 were found delinquent on one occasion during the year, as shown in Table 32, but 911 of these 8,075 were reported as having been found delinquent one or more times in previous years.

Section 4.—Penal Institutions and Training Schools

Penal institutions may be classified under three headings: (1) penitentiaries, where prisoners have long sentences and the turnover is slow; (2) reformatories, where the turnover is also rather slow; and (3) common gaols, where the turnover is extremely rapid.

If the average of the figures for inmates at the beginning and at the end of the year be considered the average population for the year, and the number of discharged as the turnover, the turnover in the years 1956 and 1957 was: in penitentiaries, 57 and 56 p.c.; in reformatories, 373 and 362 p.c.; and in gaols, no less than 1,742 and 1,833 p.c. respectively.

In considering these figures it should be borne in mind that the common gaol population changes from day to day and is made up partly of accused persons awaiting trial who may be either liberated or sent to a penitentiary or reformatory.

Subsection 1.—Penitentiaries*

The penitentiaries of Canada are administered by the Penitentiaries Branch of the Department of Justice. Eight institutions are included in the system, the two largest being at Kingston, Ont., and St. Vincent de Paul, Que. Others are at Dorchester, N.B., Prince Albert, Sask., Stony Mountain, Man., New Westminster, B.C., Collin's Bay, Ont., and St. John's, Nfld., though the latter is operated under provincial authority. Included also in the system is a Federal Training Centre at St. Vincent de Paul operated for the treatment and training of offenders under 25 years of age and a Penitentiary Staff College

* Prepared under the direction of R. B. Gibson, Commissioner of Penitentiaries, Ottawa.

at Kingston for the training of penitentiary officers through courses of instruction and training conferences. In April 1957, Joyceville Institution, ten miles from Kingston, started operating as part of Kingston Penitentiary. Its present accommodation is limited to 48 inmates, but when construction is completed the capacity of this new eastern institution will be increased to 500. It will then become a self-contained organization distinct from Kingston Penitentiary. During the year ended Mar. 31, 1958, the average daily population of the penitentiaries was 5,311 and the total net cash outlay for maintenance for the year was \$10,965,174 or \$5.66 per inmate per day.

Females given penitentiary sentences in the various provinces are sent to the Prison for Women at Kingston, Ont., where special quarters and staff are maintained for their detention and supervision; inmates in custody on Mar. 31, 1958, numbered 85.

Since the proclamation of the Penitentiary Act on Sept. 1, 1947, many of the recommendations of the Royal Commission (1938)—usually called the Archambault Commission—to investigate the penal system in Canada have been implemented. The Commission made 88 recommendations 68 of which involved action on the part of the Federal Government and the other 20 involved either joint action with the provinces or were the responsibility of the provinces and/or local communities.

Of the 68 recommendations which called for action on the part of the Federal Government, at least 50 have been or are in process of being carried out. Among these are the following:—

- (1) In 1947 the headquarters administration of the penitentiaries was completely reorganized, a move which included the appointment of a Commissioner responsible directly to the Minister of Justice, and of Deputy and Assistant Commissioners to assist him in the performance of his duties.
- (2) Wardens have been given full responsibility for the executive management of their institutions under the direction of the Commissioner. Four conferences of all Penitentiary Wardens have been held in Ottawa since 1947.
- (3) More than half of all the penitentiary staffs have so far attended training courses at the Penitentiary Staff College at Kingston. In addition, in-service training officers have been appointed at all institutions and local training is carried out for all newly appointed officers.
- (4) The pay of penitentiary officers has been increased in nearly all cases by at least 100 p.c. since the Commission's report. For example, guards in 1938 received a maximum salary of \$1,500 and now receive \$3,810. The 40-hour week was introduced in 1955.
- (5) A complete revision of the methods of classifying prisoners has been made and two or more qualified Classification Officers are now employed at each institution. These officers assess each inmate, after obtaining information as to his previous record, social habits, aptitudes, educational attainments and general background, and submit their reports to a Classification Board for decision upon a plan for treatment and employment. The Classification Officers work in close co-operation with officials of the National Employment Service and the Prisoners' Aid Societies in planning employment and assistance on the prisoner's release and officials of these organizations regularly visit the penitentiaries to interview inmates.
- (6) Full-time vocational training courses in most of the construction trades have been set up at five institutions under competent teacher-trainers, the courses lasting for a period of nine months. Necessary equipment, tools and materials to turn out well qualified tradesmen are provided. Results to date show that less than 20 p.c. of those who have taken these training courses have been subsequently charged with criminal offences.
- (7) The staff of school teachers has been more than doubled since 1947, libraries have been modernized and the supply of books, magazines, technical books and educational films greatly increased. Correspondence courses provided by the Department of Veterans Affairs and by the Provincial Departments of Education are available free of charge to all inmates who wish to take advantage of them.
- (8) A comprehensive program of recreational activities is in effect in all institutions, with facilities for softball, soccer, hockey, boxing and other sports to be carried on in non-working hours. Hobbycraft activities are permitted in the cells, and prison magazines prepared and edited by inmate editorial boards are published at all institutions.

- (9) Hospitals have been modernized and supplied with much additional equipment, such as X-ray equipment, surgical appliances, and other modern aids to diagnosis and treatment.
- (10) Psychiatrists are now employed on the staff of six penitentiaries, and outside psychiatrists are consulted at the institutions where a staff psychiatrist is not available. At one institution there is a special psychiatric ward with a trained staff.
- (11) A thorough survey of the prison industrial shops was undertaken; shops were modernized and provided with proper lighting and facilities and hundreds of thousands of dollars worth of modern machinery. The value of industrial work produced in these shops increased from \$409,278 in 1946-47 to \$1,361,109 in 1956-57.
- (12) Remuneration for the prisoners has been increased from a flat rate of 5 cents per day to a graded scale of 12, 18 and 24 cents, based on individual rating for conduct, industry and progress towards rehabilitation. A portion of the money so earned is set aside for the day of release, with the balance available for spending in the institutional canteen for small comforts such as tobacco, sweets, soft drinks and toilet articles.
- (13) The recommendation of the Commission with regard to Prisoners' Aid Societies has been largely implemented by the formation of John Howard Societies or other similar associations in every province and in many localities in the individual provinces; these societies are assisted by grants from the Government of Canada.
- (14) The rules for the discipline of officers have been revised, and provide that no officer may be dismissed without being heard, and he must be advised of the reason for his dismissal.
- (15) All penitentiary kitchens have been modernized and supplied with the necessary mechanical equipment to meet approved culinary and sanitary requirements. A qualified official at Headquarters is employed to supervise and direct the operation of the kitchens.
- (16) An agricultural college graduate was appointed Supervisor of Farms and farming operations have been greatly expanded. Dairy herds are maintained at all institutions except British Columbia and Collin's Bay, with pedigree stock and a high record of milk production. Most of the pork, eggs and vegetables used in the penitentiaries are produced on the farms. Factories for the canning of fruit and vegetables are in operation at two institutions.

The Ticket-of-Leave System.—The parole system in Canada is legalized under the Ticket-of-Leave Act (R.S.C. 1952, c. 264) administered by the Minister of Justice. It is described in detail in the 1948-49 Year Book, pp. 305-308.

Subsection 2.—Reformatories and Other Corrective Institutions

As of June 1, 1951, there were 13 reformatory and corrective institutions, four of which were for women. Enumeration cards were completed for 2,551 men and 141 women on June 1, 1951. In these institutions for adults 29 p.c. of the inmates were under 21 years of age at the time of admission and almost 50 p.c. were between the ages of 21 and 39 years. The proportion of single men was 63 p.c. and three out of four of the men whose residence was known lived in urban centres. More than one-half of the women (53.2 p.c.) were single and the majority (91.0 p.c.) of those whose residence was known lived in urban centres. From five to eight years of elementary school education were recorded for about one-half of the male and female inmates. Only 6.7 p.c. of the men were unemployed at the time of admission. On the other hand 20.6 p.c. of the women were unemployed and another 34.0 p.c. had never worked.

The revenue for the support of the institutions for men was derived chiefly from provincial funds (56.0 p.c.) and from the sale by the institutions of farm and industrial products (41.3 p.c.). To support the institutions for women, income was received from provincial funds (31.0 p.c.), municipalities (1.8 p.c.), sale of products (53.4 p.c.), donations and bequests (4.6 p.c.) and other sources (9.2 p.c.).

Summary statistics of inmates, movement of population, terms of sentence and penal record of inmates are given in the 1954 Year Book, pp. 311-313.

Subsection 3.—Training Schools

Reports on movement of population are received yearly from training schools and figures compiled therefrom are shown in Table 36 for the years 1953 to 1957.

36.—Movement of Population in Training Schools, Years Ended Mar. 31, 1953-57

In residence at end of year.....	2,692	2,912	2,989	2,864	3,130

¹ The discrepancy between pupils in residence end of year 1954 and those in residence at beginning of year 1955 comes from the inclusion in Home of the Good Shepherd, Saint John, N.B., of seven adults.

² The discrepancy between 1955 and 1956 comes from closing of St. Patrick's Home, Halifax, N.S.

More detailed information on training schools is collected at each decennial census. Statistics compiled from the Census of 1951 are summarized in the 1954 Year Book, pp. 314-316.

Section 5.—Police Forces

The Police Forces operating in Canada are organized under three groups: (1) the Federal Force, which is the Royal Canadian Mounted Police whose operations cover a very wide field in addition to purely police work; (2) Provincial Police Forces—the Provinces of Ontario and Quebec have organized their own Provincial Forces, but the other provinces engage the services of the Royal Canadian Mounted Police to perform parallel functions within their boundaries; (3) Municipal Police—every urban centre of reasonable size has its own police organization which is paid for by the local taxpayers and which attends to police matters within the borders of the municipality concerned.

Municipal police statistics are at present undergoing revision and are therefore not carried in this edition of the Year Book.

Subsection 1.—The Royal Canadian Mounted Police*

The Royal Canadian Mounted Police is a Civil Force maintained by the Federal Government. Organized in 1873 as the North West Mounted Police, its duties were confined to what was then known as the North West Territories. By 1904 the work of the Force received signal recognition when the prefix "Royal" was bestowed upon it by King Edward VII. In 1905 when Alberta and Saskatchewan were constituted provinces an arrangement was made whereby the Force continued to discharge its duties as formerly, each province making a contribution towards defraying the cost. This arrangement was continued until 1917.

* Revised by the Commissioner of the Royal Canadian Mounted Police, Ottawa.
64973-1—22½

In 1918 the Royal North West Mounted Police was assigned the duty of enforcing Dominion legislation for the whole of Canada west of Port Arthur and Fort William. Soon after the end of World War I an extension of governmental activities made it obvious that the enforcement of Dominion statutes throughout Canada must be the responsibility of a Dominion Force and therefore the jurisdiction of the Royal North West Mounted Police was extended to the whole of Canada early in 1920. In that year the name of the Force was changed to the Royal Canadian Mounted Police and the former Dominion Police with Headquarters at Ottawa, whose duties were largely connected with guarding public buildings in that city and Canadian Government dockyards at Halifax, N.S., and Esquimalt, B.C., was absorbed by the Royal Canadian Mounted Police.

The Force is controlled and administered by a Minister of the Crown (the Minister of Justice). Its Commissioner has the rank and status of a Deputy Minister. Officers are commissioned by the Crown and are selected from serving non-commissioned officers. The Force is divided into 17 Divisions, including the Marine Division, with Headquarters at Ottawa, Ont. There are 640 detachments distributed over the entire country. Its land transportation consists of 1,476 motor vehicles, most of which are fitted with two-way radio sets connecting with wireless stations operated by the Force. Such stations operate in both Western and Eastern Canada, including the Quebec-United States boundary area. The Air Division of the Force operates 13 aircraft of various types. The strength of the Force is 5,318 officers and men, with a reserve strength of 268. The reserve strength is located chiefly in the larger cities where men can be congregated easily and where instruction can be given in the evenings. The Marine Division has a strength of 254 officers and men and operates 30 ships of various kinds, the majority of which are located on the Atlantic and Pacific Coasts and on the Great Lakes. The Personnel Branch of the RCMP has officers in each Division across the country. Great care is taken in the selection of recruits.

The Royal Canadian Mounted Police is responsible for enforcing federal laws throughout Canada and is specially empowered to deal with infractions against smuggling by sea, land and air. It also enforces the provisions of the Excise Act and is responsible for the suppression of traffic in narcotic drugs. In all, the Force has responsibility in over 50 Federal Government Acts including the Indian Act. It also assists many departments of the Federal Government in administrative duties and is responsible for the protection of government buildings and property. It is the sole police force operating in the Yukon and Northwest Territories. Furthermore it undertakes intelligence and security services for the Federal Government. In addition to its federal duties, agreements have been made with the Provinces of Alberta, Saskatchewan, Manitoba, Nova Scotia, New Brunswick, Prince Edward Island, Newfoundland and British Columbia whereby the services of the Royal Canadian Mounted Police may be secured to enforce provincial laws and the Criminal Code in rural districts upon payment for such services. The agreement with Saskatchewan has been in existence since 1928 and those with the Provinces of Alberta, Manitoba, New Brunswick, Nova Scotia and Prince Edward Island since 1932. The agreements were entered into with the Provinces of Newfoundland and British Columbia in August 1950 and the police forces of those provinces were absorbed by the Royal Canadian Mounted Police. The Force has agreements also for policing more than 124 district municipalities, cities and towns.

The services of Royal Canadian Mounted Police experts in fingerprints, crime-index information, examination of firearms and questioned documents are available to all other police forces in Canada. A *Police Gazette*, issued monthly and containing instructional articles on police work as well as the latest information on wanted or missing persons, is sent to all police forces across the country. The Force has two Police Colleges that are open to selected personnel from other police forces in Canada and to a more limited number of those outside its boundaries.

A special article appears in the 1957-58 Year Book entitled "The Philosophy of the Royal Canadian Mounted Police".

Subsection 2.—Provincial Police Forces*

Quebec Provincial Police Force.—This Force is responsible for upholding law and order over the whole territory of the province from the provincial boundary between Ontario and Quebec to the Magdalen Islands in the Gulf of St. Lawrence. The Force is composed of about 1,400 men in charge of a Director, who is responsible to the Attorney-General of the province.

To facilitate operations the territory is divided into two almost equal parts designated as the District of Montreal and the District of Quebec. The Director has his office in Montreal and an Assistant Director is situated in the city of Quebec. Working under these Directors are two Deputies and an Inspector General. In each District the Police Force is divided into three sections—the detective corps, the constabulary and the traffic officers. Each section is in charge of a captain supported by a number of lieutenants and sergeants.

A province-wide frequency modulation radio-communication system has been established at Montreal. A main station operating on the top of Mount Royal directs radio equipped cars within a radius of between 60 and 80 miles around Montreal; similar stations operating from the cities of Quebec and Trois Rivières direct the mobile units operating in their respective areas. Substations operate at each of the eight bridges giving access to or exit from the city of Montreal and a number of cars, all equipped with three-way radio units, patrol the surrounding country day and night.

Ontario Provincial Police.—The Ontario Provincial Police Force is maintained by the Ontario Government and administered by the Attorney-General's Department. It is responsible for law enforcement in the rural and unorganized parts of the province and in certain municipalities by contract. The development of the Force from its beginning in the early years of Confederation to the passing of the Police Act in 1946, is outlined in the 1950 Year Book, pp. 332-333.

The Force, with a strength of approximately 1,800 in 1958, consists of a General Headquarters at Toronto and 17 District Headquarters at Chatham, London, Dundas, Niagara Falls, Toronto, Mount Forest, Barrie, Peterborough, Belleville, Perth, Cornwall, North Bay, Sudbury, Sault Ste. Marie, Timmins, Port Arthur and Kenora. Each District has detachments adequate to meet local law-enforcement requirements. A Criminal Investigations Branch, under the command of an Assistant Commissioner, is maintained at Toronto to handle crimes of a major nature.

The Force operates one of the largest frequency modulation radio networks in the world, which is a most efficient method of combating every type of lawlessness. The network includes 63 fixed stations—46 60-watt stations and 17 250-watt stations, one of which is dual-controlled—and 590 radio-equipped mobile units including five boats operating on Lake Temagami, Lake Simcoe, Lake Nipissing, Lake of the Woods and Georgian Bay.

In 1958, the Ontario Provincial Police Force policed 60 municipalities which requested this service under the provisions of the Police Act.

PART I.—FORMAL EDUCATION*

Section 1.—Education in the Provinces and Territories

This Section deals mostly with that part of Canada's population enrolled in regular school classes—about one-sixth of the total. This is not a complete picture of education in Canada as there are many others enrolled in part-time courses and evening classes, and everyone receives some informal education through the daily newspapers, radio, television, cinema, books, magazines and other sources. Most of the children aged six to 13 are enrolled in school although some children begin regular classes or enter kindergarten at age five. About 7 p.c. drop out at age 13 and from that age on, the number attending school drops rapidly year by year. Thus 90 p.c. are in school at age 14, 76 p.c. at age 15, 55 p.c. at 16, 37 p.c. at 17, 23 p.c. at 18, and 14 p.c. at age 19. Only 15 p.c. of those aged 20 to 24 are in school and less than 1 p.c. from that age on.

To instruct these students, some 130,000 members of the work force of the country are employed as regular staff members of the schools and universities and thousands of others are part-time employees or volunteers in the adult education field. An important though smaller number are employed to administer and inspect the schools and to determine policy; and a somewhat larger group of volunteers are elected or appointed to school boards.

* Prepared in the Education Division, Dominion Bureau of Statistics.

Education was made the responsibility of the provinces by the British North America Act and each province has developed a system to meet its needs. The Federal Government was left the responsibility for education of the Indians, Eskimos, all children in the territories outside of the provinces, the penitentiaries and the establishments of the Armed Forces.

Each province has developed its system independently but certain factors, such as proximity, interchange of personnel, conventions, etc., have resulted in greater similarities than differences among the systems. Because of this, a convenient method of explaining the structure of public education in Canada is to attempt a typical system of education for the Canadian provinces and then to show how each differs from this.

General Structure of Public Education

Provincial Departments of Education.—Education is administered by a Department of Education comprised of the following personnel: a Minister of Education, an elected member of the provincial legislature who is appointed as a cabinet minister and is responsible to the legislature for the satisfactory operation of the system; a Deputy Minister of Education, an expert in education employed as a civil servant, who administers the program set forth by the Minister, advises him on policy and to a great extent determines the continuing policy of the Department; a Chief Superintendent, or Chief Inspector of Schools, appointed as head of the inspectoral or supervisory staff who are liaison officials between the Department of Education and the teachers, principals and local education authorities.

On the program side of the Department, directors are appointed for special aspects of education as soon as they have reached the point where they should be encouraged and developed throughout the system. The number and variety of these are determined by the size and educational philosophy of the province. Typical fields include a selection of the following curriculum: vocational education, professional training, guidance, audio-visual education, school broadcasting, research, testing, auxiliary classes, correspondence courses, art, music, home economics, physical education and health, adult education and rural education.

In addition, the Department usually has a registrar, an accountant, a manager of a textbook branch, and necessary assistants and clerical personnel. In many provinces, public libraries are under the jurisdiction of the Department of Education. The Department prescribes the curricula, authorizes textbooks or lists of books, prescribes teacher-training, inspects the schools, and determines the school year, hours of instruction and ages of compulsory attendance.

Local Education Authorities.—A majority of the boards of education or trustees are now elected by the resident ratepayers of the district. Formerly, the urban areas elected or appointed board members, and rural areas elected a board for each one-room rural school. While this is still generally the practice in Newfoundland, Prince Edward Island, Manitoba and for the parishes in Quebec, elsewhere the trend has been towards organizing the rural areas of the province into larger administrative units under a central board, although the local district boards may be retained to assist in the administration of individual schools that have not been centralized. Local school authorities have general responsibility for the employment of teachers, maintenance of local schools and related matters within the frame-work of the School Act.

Education is financed largely through local taxes on land and improvements, and from government grants. Methods of determining the grants vary from province to province but usually consist of a basic grant determined on the number of rooms or teachers, average daily attendance, level of instruction given, cost of transportation and possibly some equalization depending on need. Special grants may be given to assist in construction, for audio-visual equipment, for special classes, etc. Very little revenue is received from fees, and that usually from students living outside the district or those in upper high school grades.

Types of Schools.—Only a brief description of the more common types of schools found in most provinces can be given. There are a few junior kindergartens for four-year-olds and regular kindergartens in larger urban centres but the number is decreasing rather than increasing because of the necessity of using all available teachers and facilities at the elementary level.

The elementary schools generally teach grades 1 to 8, the subjects including English, arithmetic, social studies, health and physical training, natural science, music, arts and possibly religion. Crafts, agriculture, industrial arts and a second language may be added during the last two years.

The secondary schools normally teach grades 9 to 12 or 13. The courses offered vary considerably: a school may be typically academic, commercial, or technical; a combination of these or a composite school offering academic, commercial, technical, agricultural and home economics courses; or a junior or senior high school teaching only some of the grades. Subject matter is considerably more diversified at the high school level. It continues the work of the elementary grades but branches out, offering courses in science and mathematics, English and foreign languages, history and geography, health and physical education, music, art, drama, general shop, home economics, agriculture and other subjects. The tendency is to require a set number of subjects to be made up from obligatory and optional subjects each year. Extra-curricular activities generally form a part of the high school offering.

Trade schools and technical institutes are found in most provinces. Trade schools provide instruction for apprentices in the trades, commercial occupations and so on, and technical institutes prepare technicians in electronics or such specialties as paper or cloth making and other highly skilled occupations, many of the courses being at the post-secondary level.

Teacher-training schools may be an integral part of the university or be separate, with the university providing a one-year postgraduate course for secondary teachers.

All provinces have one or more universities that are subsidized by the province. However, the universities are not under the direct control of the Department of Education, but are operated under boards of governors and senates. In addition, most provinces have several theological or other colleges affiliated with one or other university.

Individual Characteristics of Provincial and Territorial Systems

The following paragraphs indicate the ways in which the several provincial and territorial systems differ from the general pattern outlined above and mention, as well, institutions and practices of special interest.

Newfoundland.—Newfoundland might be said to have a public denominational school system. The Deputy Minister is assisted by four Superintendents of Education, one for each of the four main religious denominations—Anglican, Roman Catholic, Salvation Army, and United Church. The Minister of Education, the Deputy Minister and the four Superintendents form a Council of Education which makes educational policy and co-ordinates the various parts of the system. One curriculum serves the schools of all denominations and teachers receive common training in the Memorial University of Newfoundland, a provincial institution.

Each denomination builds and maintains its own schools, with financial assistance from the provincial government. A few amalgamated schools have been organized, mostly in company towns. The salaries of most teachers are paid directly by the province according to a provincial scale. Until recently no provision had been made for local taxation, but in 1954 legislation was passed which provided that any area might be declared taxable for school purposes; by 1955 only one area had been so declared.

Some children are admitted to school at the age of five in what is called a "pre-grade 1" class. Elementary education includes grades 1 to 8 and secondary education grades 9 to 11. Most schools teach both elementary and secondary grades. The high school curriculum

is academic, leading to university entrance after grade 11. In some schools in St. John's, grade 12 studies are offered (following the Nova Scotia grade 12 program of studies and the pupils writing examinations set by the Atlantic Provinces Examining Board) and a post-grade 11 commercial course is taught. An active school-building program in the province includes, for the first time, regional high schools. Few private schools are operated in Newfoundland.

Trade courses for apprentices and other trade training is offered in the St. John's Vocational Training Institute. A provincial university, to which is affiliated a theological college (Queen's), is located in St. John's. The Division of Adult Education of the Department of Education sponsors programs in both urban and rural centres.

Prince Edward Island.—Except in the city of Charlottetown and the incorporated towns, there are no local governing authorities, and therefore the school boards collect the school tax. About 87 p.c. of the money for teachers' salaries is provided by the provincial government; it is supplemented by the local school boards.

Prince Edward Island is essentially a rural province with more than 75 p.c. of the schools being rural one-room structures. Another 17 p.c. of the schools have from two to five rooms and only 8 p.c. are larger. Kindergarten classes are available in a few urban schools. The elementary school curriculum comprises grades 1 to 8 and high school grades are 9 to 12 but it is common for rural schools to teach grades 1 to 10, with grades 11 and 12 available in the larger centres. One junior high school has been established recently. There are also a few private Roman Catholic schools in the province.

Trade training is given in the Provincial Vocational School and two private business colleges provide commercial courses. The government operates the Prince of Wales College and Normal School in Charlottetown, offering junior college and teacher-training courses, and both high school and university programs are available at St. Dunstan's College (Roman Catholic). A Director of Adult Education on the staff of the Department of Education organizes programs throughout the province.

Nova Scotia.—In 1942 the provincial legislature of Nova Scotia established municipal school units which accepted responsibility for a set "minimum program of education" in rural and village schools. Differences between the amount received from a fixed municipal tax and the cost of the minimum program was paid as an "equalization grant" by the province. On Jan. 1, 1956, significant legislation gave effect to recommendations of a Royal Commission on Public School Finance in Nova Scotia. It was designed to establish a "foundation program" in all public elementary and secondary schools, to make more equitable the basis of taxation for school purposes and to distribute provincial support in relation to need.

The public school curriculum of Nova Scotia is divided into elementary, junior high and senior high, the latter schools providing commercial courses as well as general academic courses. Rural and regional high schools, commonly offering grades 7 to 12, provide secondary school facilities outside the urban centres. The number of pupils studying by correspondence, though a relatively small proportion of the total, has increased in recent years because of the shortage of qualified teachers. There are about a score of private elementary and secondary schools in the province, almost all of them Roman Catholic.

Vocational training is provided under the auspices of the Department of Education in two county vocational high schools, in evening vocational classes in more than 40 centres, by correspondence courses, and in eight coal-mining schools, a land survey school, a marine navigation school, a marine engineering school, and a college of art. The Department of Labour operates three Canadian Vocational Training Centres. The Nova Scotia College of Agriculture, operated under the Department of Agriculture, gives short courses in agriculture. Fisheries schools are operated by the Department of Trade and Industry.

In 1955 there were seven private business colleges and nine private correspondence schools registered under the Trade Schools Regulations Act, which is administered by the Department of Education.

Until 1955, elementary school teachers were trained only in the Nova Scotia Normal College and secondary school teachers in the universities. Since that year, however, several universities have provided teacher-training to students who have completed two or three years of college studies, and to those who have university degrees, thus preparing teachers for the elementary and junior high schools.

Nova Scotia has 14 institutions of higher education: Acadia University, Collège Sainte-Anne, Convent of the Sacred Heart (junior college), Dalhousie University, University of King's College, Maritime College of Pharmacy, Pine Hill Divinity Hall, Holy Heart Seminary, Maritime School of Social Work, Mount Saint Vincent College, Nova Scotia Agricultural College (junior college), Nova Scotia Technical College, St. Francis Xavier University (including Mount Saint Bernard College and Xavier Junior College), and St. Mary's University.

With the assistance of the Adult Education Division of the Department of Education, there is a province-wide program for adults which includes folk schools, evening classes, short courses and cultural services, with special emphasis on economic development. A number of the universities offer extension services.

New Brunswick.—New Brunswick has recently been changing from a 12-year to a 13-year system and students of grades 11 and 12 write the Atlantic Provinces Examining Board junior matriculation papers. In two urban high schools grade 13 is taught, this grade following the program of studies of the first-year course at the University of New Brunswick, whose examinations the pupils write. Most of the private academic schools in the province, of which there are fewer than 20, are Roman Catholic institutions.

Facilities for secondary education have been increased by the construction of regional and rural high schools. In many of these, and in urban composite high schools, there are several choices of curricula—academic, commercial, industrial, home economics and agriculture. Vocational education is provided in two vocational schools, in the New Brunswick Technical Institute at Moncton, in evening classes in many centres, in the Maritime Forest Ranger School, in four agricultural schools (two operated by the Department of Agriculture and two by the Department of Education), and in private business colleges of which there are about half a dozen.

Elementary school teachers are trained in the New Brunswick Teachers' College and in the normal school of the Université Saint-Joseph. In addition, there are normal school courses for men and women in six Roman Catholic educational institutions. Secondary school teachers are trained in five universities, and for industrial-course teachers there is a training program at the New Brunswick Technical Institute. A recent development in teacher education was the establishment at the University of New Brunswick and at one other university, of a three-year course leading to a Bachelor of Elementary Education degree.

New Brunswick has six universities and colleges: Mount Allison University, University of New Brunswick, Université du Sacré-Coeur, Université Saint-Joseph (including Collège de l'Assomption and Collège Notre-Dame d'Acadie), Université Saint-Louis (including Collège Maillet), and St. Thomas College.

Quebec.—The Quebec academic system differs most widely from the general provincial pattern in that there is no Minister of Education. Education is represented in the provincial cabinet by the Provincial Secretary and the Department of Education is headed by a Superintendent. Under him are two Deputy Ministers, one heading the Roman Catholic system the other the Protestant system. Whereas private schools are permitted in all provinces, Quebec encourages and subsidizes many of them. Chief among these are the nearly 100 classical colleges affiliated to the French language universities (Laval,

Montreal and Sherbrooke). Each offers an eight-year course, entered after completion of the seven years of elementary schooling and leading in two four-year stages—secondary and college—to the baccalaureate degree.

The French public school curriculum has been revised recently. A seven-year elementary and four- or five-year secondary school has been substituted for a three-stage primary school (elementary, 1 to 7; complementary, 8 and 9; superior, 10 to 12). Also a classical course has been introduced into the public secondary school, equivalent to the first four years of the classical college curriculum. The junior matriculation level in both Catholic and Protestant schools is at the end of the eleventh year.

Public vocational education is highly developed in Quebec, chiefly under the Department of Social Welfare and Youth which operates a network of arts and trades schools, technical schools, and institutes. Teacher training, too, has undergone radical revision within the past few years. The normal schools raised the entrance requirement to completion of the eleventh year, instituted one-, two- and four-year courses, and related their programs to university requirements so that a degree in pedagogy may be earned in the four-year course.

At the university level the province has the three French language universities mentioned above and the French language Canadian Services College—*Collège Militaire Royal de Saint-Jean*. The three English language institutions of higher education are McGill University (including Macdonald College), Sir George Williams College, and Bishop's University.

Adult education forms part of the program of many governmental and voluntary bodies, certain of the latter receiving support from the provincial government.

Ontario.—Ontario has developed a complex pattern of local units of school administration. One county, for example, might conceivably have a wide variety of school units, such as school sections, consolidated sections, continuation districts, township school areas and town and village districts, which makes summarization difficult.

The province has a 13-grade public school program, the junior matriculation level being reached at the end of grade 12, and senior matriculation at the end of grade 13.

Elementary schools (grades 1 to 8) under control of the Department of Education may be public or separate, all but three of the latter being Roman Catholic. A considerable number of the Roman Catholic separate schools in French language communities are bilingual and are staffed by teachers trained in both English and French. Secondary schools (grades 9 to 13) under Departmental control are all public and are of five main types: collegiate institutes, high schools, continuation schools, vocational schools, and composite schools. A relatively small number of pupils attend private schools; most of these schools are inspected by the Department of Education and their students are prepared for Departmental certificates.

Most vocational education at the secondary level is provided in the public secondary schools, although there is a Provincial Institute of Trades (in Toronto), two agricultural schools under the Department of Agriculture, many private business colleges and a number of private trade schools. The Department of Education also operates five technical institutes in which most courses are at the post-secondary level.

Teachers for the elementary schools are trained at teachers' colleges operated by the Department of Education, in a one-year course following completion of grade 13 or a two-year course following grade 12. Secondary school teachers receive a one-year period of training at the Ontario College of Education, University of Toronto, after university graduation. Vocational school teachers are also trained at the Ontario College of Education.

In addition to a number of independent junior colleges and professional training schools, the province has nine institutions of higher learning: University of Ottawa, Queen's University, Royal Military College, University of Toronto, McMaster University, University of Western Ontario, Assumption University of Windsor, Carleton University, and *Collège du Sacré-Coeur*. All but the last two have federated or affiliated colleges.

In the field of adult education, the Community Programmes Branch of the Department of Education gives assistance to informal education and recreation programs, public secondary schools sponsor night classes, and the universities offer extension services. Many voluntary agencies also operate in this field.

Manitoba.—The curriculum of Manitoba's public schools is organized in three stages: elementary (kindergarten and grades 1 to 6), junior high (grades 7 to 9) and senior high (grades 10 to 12). Schools of the three types exist in the larger centres but in rural areas most or all of the grades are often taught in one school. There has been little consolidation in Manitoba and many small schools still exist. No provision is made for separate schools in the public system but there are private or parochial schools which are inspected by officials of the Department of Education.

Winnipeg has a vocational school at the senior high level and composite high schools are found in other centres; vocational courses are taught together with academic courses in a number of schools. In addition, the Department of Education operates a trade school (Manitoba Technical Institute) in Winnipeg, and the Department of Agriculture operates an agriculture and home-making school in Brandon.

A one-year course following grade 12 is conducted at the Provincial Normal School at Tuxedo and at the Normal School of Brandon College for the training of elementary school teachers. Secondary school teachers are prepared by the University of Manitoba and by Brandon College in a post-graduation year. Summer courses at the Manitoba Technical Institute are provided for the training of vocational instructors.

The institutions of higher learning are the University of Manitoba (with which are affiliated Brandon College, the Manitoba Law School, Collège de Saint-Boniface, St. John's College, St. Paul's College and United College) and the Grand Séminaire de Saint-Boniface, an affiliate of the University of Montreal, Que. Direction of the provincial adult education program and the University of Manitoba's extension services is fused in the office of the Director of University Extension and Adult Education. Agricultural extension is under the Department of Agriculture.

Saskatchewan.—The Saskatchewan school curriculum is divided into two stages: elementary (kindergarten and grades 1 to 8) and high school (grades 9 to 12). The senior matriculation level is at the end of grade 12 and there is no leaving certificate awarded at the junior matriculation level (end of grade 11). Public and separate (the latter chiefly Roman Catholic) schools are under the control of the provincial Department of Education which also inspects all private elementary and most private secondary schools.

Three technical schools and an increasing number of composite high schools are included in the provincial system; a Canadian Vocational Training Centre is located in Saskatoon. A government correspondence school serves a growing number of students, offering academic courses at all grade levels and courses in vocational subjects. Consolidation of school districts is proceeding in Saskatchewan but there are still many small rural schools in operation. Special attention was given to the problems of rural schooling by a provincial Royal Commission on Agriculture and Rural Life whose report on Rural Education was published in 1956.

The elementary school teachers of Saskatchewan are trained in a one-year course, following grade 12, at two Saskatchewan Teachers' Colleges (at Moose Jaw and Saskatoon). The College of Education of the University of Saskatchewan trains secondary school teachers. A recent move to relate more closely the teachers' colleges and the University made it possible for graduates of the former to gain a year's credit for their training when entering the University for the four-year Bachelor of Education course.

The University of Saskatchewan (including Regina College) and its ten affiliated colleges dominate the higher educational scene, but there are also two independent Roman Catholic theological seminaries and four colleges affiliated with the University of Ottawa.

There is an active Adult Education Division in the Department of Education and a flourishing program of rural extension centred in the College of Agriculture of the University.

Alberta.—Like Saskatchewan, Alberta has a 12-grade school system ending at the senior matriculation level. Schools may be public or separate and all private schools are under Departmental inspection. The three-stage curriculum includes: elementary (grades 1 to 6), junior high (grades 7 to 9) and senior high school (grades 10 to 12). Because of crowding in the schools there has been no kindergarten in the public system since 1954, but private kindergartens do operate.

A major project was completed in 1954 when the Coterminus Boundary Commission submitted its final report. For most of the settled parts of the province, the Commission's work resulted in identical boundaries for rural school and municipal administrative areas. Centralization of school facilities has been a significant aspect of school administration in recent years, resulting in improved facilities, better qualified teachers and greater retention of pupils in high school grades.

Vocational education is provided in public high schools, many of which are of the composite type; in the Provincial Institute of Technology and Art at Calgary; at three Canadian Vocational Training Centres—one for trade training, one for nursing aide training and one for commercial training; at the three agricultural and home economics schools operated by the Department of Agriculture; and in private trade schools and business colleges.

All teacher training in Alberta is conducted by the University of Alberta at Edmonton and a branch of that institution at Calgary. Minimum training of elementary school teachers is given in a one-year course following grade 12 while secondary school teachers must have a university degree.

Higher education is concentrated in the University of Alberta, including its Calgary branch and three affiliated colleges. There is an independent Roman Catholic seminary affiliated with the University of Ottawa, and two independent junior colleges. The University of Alberta's extension service is province-wide and the Department of Agriculture also conducts an active extension program.

British Columbia.—The basic divisions in the public school system of British Columbia are: elementary school (kindergarten and grades 1 to 6), junior high school (grades 7 to 9) and senior high school (grades 10 to 13). There are, however, several combination patterns such as elementary-junior high school, elementary-senior high school, junior-senior high school. The junior matriculation level is reached at the end of grade 12 and the senior matriculation level at the end of grade 13. No provision is made for the public support of separate schools but there are private schools in the province serving minority groups. Consolidation of schools has progressed far in British Columbia.

Public vocational schools include the Vancouver Technical School, Vocational Institute and the Vancouver School of Art, all at the secondary level, two provincial trade schools and a number of private trade schools and business colleges.

Until 1956, elementary school teachers were trained in two provincial normal schools and secondary school teachers in the University of British Columbia. In that year all teacher training was integrated in a College of Education created in the University with a branch at Victoria College.

The chief institution of higher education is the University of British Columbia, to which are affiliated Victoria College (a junior college) and four theological schools, two of which have been recently established. A Canadian Services College operates at Royal Roads, and Notre Dame College at Nelson is a junior college affiliated to Gonzaga University, Spokane, Washington, U.S.A.

Under the jurisdiction of the provincial Department of Education there are night classes, vocational courses, correspondence courses and community program services for adults, and the University operates a province-wide system of extension services.

Yukon Territory.—The Yukon Territory Department of Education, headed by a Superintendent of Schools, operates 14 public schools and two Roman Catholic separate schools. In addition, under the jurisdiction of the Indian Affairs Branch of the federal Department of Citizenship and Immigration, there are four Indian schools in the Territory proper and another across the boundary in northern British Columbia.

Northwest Territories.—The federal Department of Northern Affairs and National Resources operates schools in the Northwest Territories for Eskimos and Indians, often with the co-operation of the Anglican and Roman Catholic churches. On behalf of (and at the expense of) the Territorial Government, it also operates schools for white and mixed-blood children and, in addition, is responsible for the education of Eskimos in northern Quebec.

Curricula in the schools of the Northwest Territories is adapted to the special needs and living habits of the people. Recently, provision has been made for vocational training and the education of adults, and for correspondence courses for those unable to receive classroom instruction. To accommodate the children of nomadic Eskimos and Indians, denominational hostels are being built (at federal expense) in certain of the centres in which there are federal day schools; they are then operated by the Anglican or Roman Catholic churches.

Federal Government Roles.—In addition to the responsibility of the federal Department of Northern Affairs and National Resources for education in the Northwest Territories, the Indian Affairs Branch of the Department of Citizenship and Immigration, in co-operation with the provinces, administers Indian schools throughout Canada; the Department of National Defence, also in co-operation with the provinces, operates schools on military stations in Canada and in Europe and operates three Canadian Services Colleges in Canada; the Department of Justice provides schooling in the penitentiaries; and the Department of Veterans Affairs has a program of education in veterans hospitals as well as correspondence courses for veterans, federal civil servants, and inmates of penitentiaries. Vocational training in the provinces is assisted by the Training Branch of the Department of Labour.

Higher education is aided by federal grants to universities and by the provision of fellowship, scholarship, bursary and loan funds. Research grants are made by a number of departments and agencies of the Federal Government. In the field of adult education, the Federal Government's participation is through such channels as the newly created Canada Council for the Encouragement of the Arts, Letters, Humanities and Social Sciences, the Canadian Citizenship Branch of the Department of Citizenship and Immigration, the Canadian Broadcasting Corporation, the National Film Board, the National Museum and the National Gallery. These phases of education are dealt with in Part II of this Chapter, pp. 357-370.

Section 2.—Statistics of Schools, Universities and Colleges

Educational institutions in Canada are herein grouped under four captions: provincially controlled schools, privately controlled schools, universities and colleges, and federal schools which include schools in the Territories, schools for Indians and schools for children of Armed Forces personnel overseas. The first three groups are dealt with in this Section, while information on Indian schools, with the exception of enrolment figures shown in Table 2, is included with the general material on the Indians of Canada given in the Population Chapter, at pp. 166-170.

The provincially controlled schools, both public and separate, are most numerous and account for about 90 p.c. of the total enrolment shown in Table 1.

¹ Includes Department of National Defence (overseas). ² Estimate. ³ Degree courses for teachers given by universities included under "Universities and Colleges". ⁴ Includes Roman Catholic "Scholasticates—Normal Schools". ⁵ Includes P.E.I. ⁶ Excludes pre-matriculation enrolment.

Provincially controlled schools are financed essentially through direct taxes on property (the amount fixed by local school authorities) and provincial grants. In addition there is a much smaller number of private schools in all provinces (i.e., schools that are not conducted by publicly elected or publicly appointed boards and are not financed out of public money). At the higher education level considerable provincial support is given to the eight provincial degree-granting universities and one or more colleges in the two other provinces. Some provincial aid is given to many of the 42 degree-granting private colleges and universities and 228 (in 1955-56) colleges giving degree credit courses. In addition many of the universities and colleges are eligible for grants from the Federal Government (*see* pp. 356-357).

Agricultural colleges and schools, their location, courses offered and other pertinent information are listed in Chapter IX on Agriculture.

Direct control and operation of the public schools is in the hands of boards of school trustees which operate under provincial school law and whose members are elected or appointed usually for terms of two or three years. In several of the provinces, in addition to the unit boards in charge of a single-room rural school, and village, town or city school systems, there are unit boards in charge of larger administrative units. These are generally formed of the rural and sometimes the urban schools in a county or inspectorate, the local boards usually retaining ancillary functions. Table 2 gives the number of active boards in each province whether these are in charge of local areas or larger units, the number of official trustees appointed in lieu of boards, and the number of board members appointed and elected.

¹ Estimated where necessary.

² Appointed by the Minister of Education where, for some reason, a regular school board does not exist. Usually the official trustee is a school inspector or other departmental official.

³ Larger unit boards within a metropolitan unit; omitted from previous column to avoid duplication.

⁴ Probably included with independent local boards.

⁵ Includes seven county (municipal) councils which administer and operate the schools of their respective municipalities.

Subsection 1.—Provincially Controlled Elementary and Secondary Schools*

Enrolment and Attendance.—At the elementary school level, enrolments have been increasing steadily during the past decade, a trend that gives every indication of continuing.

* Academic and vocational day schools only.

The main factors responsible for increased enrolment in recent years are the high birth rate, heavy immigration and the generally high level of family income. Of importance also is the increased attention being given by school authorities to guidance and other means of keeping pupils in school; greater appreciation among the pupils and their families of the importance of completing secondary education; increased transportation facilities provided at public expense; the erection of dormitories in certain provinces; adoption of larger units of administration and the establishment of junior high schools and of composite schools to serve rural areas particularly.

Enrolment in provincially controlled schools for the latest school year available is given in Table 1 and average daily attendance is shown in Table 3.

3.—Average Daily Attendance in Provincially Controlled Schools, by Province, School Years Ended 1948-57

NOTE.—Comparable figures for earlier years will be found in previous editions of the Year Book, beginning with the 1932 edition.

¹ Including 231 in grade 11 and 154 in grade 12 for Prince of Wales College. ² Including 258 taking commercial courses. ³ Including 133 in senior auxiliary. ⁴ Including 5,761 in vocational. ⁵ Not including 111,505 in Roman Catholic independent schools; Protestant independent schools included. ⁶ Including Indian pupils in Indian day, residential and private schools; Indian pupils in provincial schools not included. ⁷ Including 38 new Canadians. ⁸ New Canadians.

Teaching Staffs.—In 1956-57 the teaching staffs of provincially controlled elementary and secondary schools (exclusive of Quebec for which data are not available) consisted of 32,810 men and 89,892 women, a total of 122,702. Again omitting Quebec, where 28.5 p.c. of the teachers were members of religious orders, 46 p.c. of the women teachers were married. Of the total number of teachers in the nine provinces (exclusive of Quebec), about 9.5 p.c. had received little or no training. Some 13 p.c. of the teachers left the profession in mid-summer 1956.

Financial Support.—The public elementary and secondary schools are financed almost wholly from money derived from local taxation and provincial grants. Fees for elementary schooling may be charged in Quebec. In a few of the other provinces nominal fees are charged for the higher secondary grades; in Newfoundland there is little local taxation and fees are generally charged.

In general, school boards submit their budgets to the local municipal councils which levy for and collect the required amounts. However, school boards in Quebec and a few in other provinces have the power to levy and collect taxes for school purposes. Assessment, on which taxes for school purposes are levied, is the total valuation of land and buildings, and sometimes improvements, personal property or business income are added in. Steps have been taken by several provinces to equalize real property assessment over large areas or even the whole province.

Each province has its own method of apportioning funds to local school boards. Grants are of two types. (1) The basic grant may be calculated on a minimum cost determined by an amount per classroom, salary and qualifications of the teacher, average attendance, etc. All provinces make some attempt to equalize educational opportunity through basing grants in part on some indication of need. (2) Special grants are paid to assist with transportation, music, arts and crafts, special classes, equipment, building costs, night classes, etc. These are largest in Quebec where there is marked emphasis on training for home industries, arts and crafts.

Newfoundland schools are largely supported from provincial funds. Tuition fees may be charged by school boards and by the boards of the colleges (actually schools of fairly high standard giving elementary and high school instruction) in the city of St. John's; and additional fees may be charged for fuel or janitor service where these are not provided by pupils or their families. There has been no local taxation until very recently and it now exists only in a few of the larger centres. The provincial government pays teachers according to experience and qualifications and some school boards supplement this amount. The province also makes annual grants for plant maintenance and repairs and for new construction.

Table 6 presents a comparative statement of the finances of school boards operating provincially controlled schools in so far as this information is available.

6.—Income of School Boards of Provincially Controlled Elementary and Secondary Schools, by Province, Fiscal Years Ended 1950-55

NOTE.—The receipts shown in this table do not include any amounts raised by loans or the sale of bonds or debentures as all revenue of this nature must be repaid ultimately with money raised by local taxation. Figures from 1914 are given in the corresponding table of previous Year Books beginning with the 1936 edition.

¹ Net figures, after deduction of sinking funds.

² Data for the years 1950 to 1953 are for the school year ended in June; those for 1954 and 1955 have been adjusted to the calendar year to correspond with the fiscal years of the other provinces.

Subsection 2.—Private Elementary and Secondary Schools

Private schools include all those not operated by publicly elected or appointed boards. Except in Quebec, they receive no support from public funds. Instruction is similar to that given in public schools except that more tuition may be given in music, dramatics,

art, etc., and in schools under religious control there is greater emphasis on religious instruction. In most provinces there is some form of inspection or regulation by the provincial Department of Education.

Of the 1,212 private schools reporting in the school year 1956-57, 856 were in Quebec, 114 in Ontario, 130 in the Prairie Provinces, 67 in British Columbia and 45 in the Atlantic Provinces. There were 10,869 teachers. Outside of Quebec the annual salaries for lay teachers in these schools ranged from \$1,000 to \$8,000 with a median of \$2,516. Salaries for members of religious orders are omitted as they are usually only nominal. In 1956-57 there were 75,894 girls and 75,247 boys enrolled in the reporting private schools, about 48 p.c. of them in the elementary grades. At the secondary level there were 36,704 girls and 41,410 boys enrolled.

Private schools are financed largely from fees, legacies and gifts, or are supported through religious organizations. Annual fees vary widely—in 1956-57 (exclusive of Quebec) 105 schools charged no fees, three schools charged fees of \$500 or more for day pupils, seven boarding schools charged no fees, and 21 other boarding schools had fees of \$1,000 and up. The median fee in 1956-57 was \$95 for day schools and \$583 for boarding schools. Expenditures of private schools in all provinces in that year amounted to over \$33,713,000 of which \$13,117,000 was paid out in teachers' salaries.

7.—Enrolment in Private Elementary and Secondary Schools, by Province, School Years Ended 1948-57

NOTE.—Figures from 1921 will be found in the corresponding table of previous Year Books beginning with the 1937 edition.

Business Colleges.—Of the 132 business schools reporting in 1956-57 in eight provinces (exclusive of Quebec and Newfoundland), 15 were in the Maritimes, 78 in Ontario, 27 in the Prairie Provinces and 12 in British Columbia. These employed 90 men and 279 women as full-time teachers and 51 men and 134 women as part-time teachers.

In these schools, girl students far outnumbered boys and the enrolment in evening classes was greater than that in the full-time day classes. The 1956-57 enrolments in full-time day classes were 9,112 girls and 1,085 boys and in correspondence courses, 1,608 girls and 1,097 boys. The total decreased by 722 as compared with 1955-56. More than three-quarters of the full-time day students were from 16 to 19 years of age, inclusive.

Monthly fees ranged from \$7 to \$45 for day classes and from \$5 to \$25 for evening classes. Total operating expenditures for 1957 amounted to over \$3,232,379, of which \$1,387,343 went for teachers' salaries.

8.—Enrolment in Private Business and Commercial Schools (Business Colleges), by Province, School Years Ended 1948-57

NOTE.—Figures include day and evening classes. Those from 1921 will be found in the corresponding table of previous Year Books beginning with the 1937 edition.

Subsection 3.—Universities and Colleges

Enrolment.—Total full-time university-grade enrolment in the regular winter session at Canadian universities and colleges totalled 63,041 in the academic year 1952-53, 64,140 in 1953-54, 68,339 in 1954-55, and 72,729 in 1955-56. The estimated figure for 1956-57 was 78,100 and for 1957-58 it was 86,500; for 1958-59 it was expected to be about 95,000. Prior to 1957-58, the previous all-time high had been 83,150 in the 1947-48 academic year. Table 9 gives details of enrolment in 1954-55 and 1955-56.

In 1955-56 one of about 17 full-time university-grade students in Canada was a resident of a country other than Canada. Foreign enrolment has risen considerably since the end of World War II, with a larger proportion of students from countries other than the United States and the United Kingdom coming to Canadian institutions, as shown in Table 10.

¹ Before 1949 Newfoundland was considered as being a country outside Canada.

² Data from the Committee on Friendly Relations Among Foreign Students, New York, and the Institute of International Education, New York.

³ Data from the Association of Universities of the British Commonwealth, London, England. Newfoundland is included with Canada for all years.

Graduates.—Awards made during the 1954-55 session included 12,080 bachelor and first professional degrees, 1,426 master and licence degrees, 271 earned doctorates, 282 honorary doctorates and 6,249 diplomas and certificates. For 1955-56 awards included 12,978 bachelor and first professional degrees, 1,539 master and licence degrees, 266 earned doctorates, 197 honorary doctorates and 5,564 diplomas and certificates. Table 11 gives figures for graduates in most faculties for three years.

11.—Graduates from Universities and Colleges, Academic Years Ended 1954-56

NOTE.—Figures for 1920-36 are given in the 1938 Year Book, pp. 993-997, and for 1937-53 in the corresponding table of subsequent editions.

¹ In 1937-38 one institution reported 383 instructors and lecturers earning less than \$1,000. As a corresponding number were not reported in later years, many of these were presumed to be either part-time or below the rank of instructor or lecturer; the median was calculated without these persons.

² Less than \$1,000.

Finances.—Since 1952, grants from federal, provincial and municipal governments to a group of institutions representing about 80 p.c. of the total full-time university-grade enrolments have exceeded half of the total current income, less ancillary enterprises. Table 14 gives a historical series of the finances of this group of institutions. The institutions omitted are mainly those conducted by religious orders where teachers receive little or no salary and for which financial returns are consequently not comparable.

14.—Current Income and Expenditure and Capital Resources of Universities and Colleges, Academic Years Ended 1946-55

NOTE.—Institutions included represent about 80 p.c. of the total full-time university-grade enrolment.

SOURCES OF INCOME OF UNIVERSITIES AND COLLEGES, ACADEMIC YEARS ENDED 1946-55

MILLION DOLLARS

The Federal Government established a system of university grants for current operating purposes, the first of which were paid during the academic year ended 1952. The grants were paid on the basis of 50 cents per head of population in each province, the eligible institutions receiving their shares of the total provincial allotment according to the number of full-time students at university level attending degree or graduate diploma courses. For 1956-57 and 1957-58 the payment was \$1 per head of population and for 1958-59 it was increased to \$1.50 per head of population. The distribution of payments, by province, is shown in Table 15.

¹ See text on p. 356 for basis of grant. ² Institutions in Quebec accepted payment only in 1951-52, refusing from 1952-53 to 1955-56. For 1956-57, and subsequent years, payments refused will be held in trust by the National Conference of Canadian Universities until the institutions see fit to accept them. In 1957-58, one institution accepted the grant.

During the 1956-57 academic year, plans were announced by the Federal Government for the distribution of \$50,000,000 to Canadian universities and colleges for new construction and capital equipment projects. The grants are made in an amount not exceeding 50 p.c. of the cost of specific building or capital equipment projects, with appropriate regard to the population of each province. The University Capital Grants Fund is administered by the Canada Council, which came into existence on Mar. 28, 1957. Up to Mar. 31, 1958, 12 institutions received a total of \$4,084,300 in capital grants. The Council was also endowed with an additional \$50,000,000 for the provision of scholarships and other assistance in the fields of the arts, humanities and social sciences. (See pp. 363-365.)

PART II.—CULTURAL ACTIVITIES RELATED TO EDUCATION*

Section 1.—Art and Education†

Fine Art Schools, Galleries and Museums.—Fine art appears as an elective subject of the faculty of arts in a number of universities, where it may be taken as one of five, six or more subjects for a year or two. In Mount Allison University, N.B., and in

* An outline of the *Report of the Royal Commission on National Development in the Arts, Letters and Sciences*, which was tabled in Parliament on June 1, 1951, is given in the 1952-53 Year Book, pp. 342-345. Available from the Queen's Printer, Ottawa.

† Revised under the direction of Alan Jarvis, Director, National Gallery of Canada, Ottawa.

the Universities of Saskatchewan and Manitoba, there is a sufficient number of courses to allow the taking of a Bachelor degree with specialization in fine art. At the University of Toronto an Honour B.A. in art history and archaeology is offered, as well as graduate work in this field. Departments of fine art were opened by McGill University in 1948-49, by the University of British Columbia in 1949-50 and by the University of Alberta in 1953-54; McMaster University reopened its department in 1951.

Confusion is often caused by the fact that some universities stress the history of art and others its practice. In 1959 the National Gallery sponsored a conference of university art departments, and a movement was begun towards the attainment of a proper ratio between the number of courses in history and practice of art. A recommendation was also made for the establishment of a second centre of graduate studies (in addition to that at Toronto), preferably in Montreal.

There are also schools of art not requiring any fixed academic standing for admission, as they are more concerned with the technical development of the artist. The most widely known of these are:—

- Nova Scotia College of Art, Halifax, N.S.
- École des Beaux-Arts, Quebec, Que.
- École des Beaux-Arts, Montreal, Que.
- School of Art and Design, Montreal Museum of Fine Arts, Montreal, Que.
- Ontario College of Art, Toronto, Ont.
- University of Manitoba School of Art, Winnipeg, Man.
- Provincial Institute of Technology and Art, Banff School of Fine Arts,
Banff, Alta. (affiliated with the University of Alberta) Calgary, Alta.
- Vancouver School of Art, Vancouver, B.C.

Courses in these schools vary in length with the requirements of the individual student but may extend over as many as four years. Summer schools of art are sponsored by some of the foregoing institutions, by universities, and by various independent groups.

Public art galleries and museums in the principal cities perform valuable educational services among adults and children. Children's Saturday classes, conducted tours for school pupils and adults, radio talks, lectures and often concerts are features of the programs of the various galleries. Many of these institutions supply their surrounding areas with travelling exhibitions, and organizations such as the Maritime Art Association, the Western Canada Art Circuit, the Saskatchewan Arts Board and the Art Institute of Ontario, have been founded to carry on the work on a regional basis. The National Gallery of Canada has a nation-wide program of this nature.

The principal art galleries and museums* are:—

- Beaverbrook Gallery, Fredericton, N.B. (opening in 1959)
- New Brunswick Museum, Saint John, N.B.
- Museum of the Province of Quebec, Quebec, Que.
- Montreal Museum of Fine Arts, Montreal, Que.
- National Gallery of Canada, Ottawa, Ont.
- London Public Library and Art Museum, London, Ont.
- Art Gallery of Toronto, Toronto, Ont.
- Royal Ontario Museum, Toronto, Ont.
- Art Gallery of Hamilton, Hamilton, Ont.
- Willistead Library and Art Gallery, Windsor, Ont.
- Winnipeg Art Gallery, Winnipeg, Man.
- Mackenzie Art Gallery, Regina, Sask.
- Edmonton Museum of Arts, Edmonton, Alta.
- Vancouver Art Gallery, Vancouver, B.C.
- Arts Centre of Greater Victoria, Victoria, B.C.

* A complete list of Canadian art museums, societies and schools is included in the Canadian section of the current issue of the *American Art Directory* (R. R. Bowker Co., New York).

Other Art Organizations.—The leading art organizations of national scope, exclusive of museums and art galleries, include the following:—

Association of Canadian Industrial Designers
 Canadian Arts Council*
 Canadian Group of Painters
 Canadian Guild of Potters
 Canadian Handicrafts Guild
 Canadian Museums Association†
 Canadian Society of Graphic Arts
 Canadian Society of Painter-Etchers and Engravers
 Canadian Society of Painters in Water Colour
 Canadian Society of Landscape Architects and Townplanners
 Community Planning Association of Canada
 Federation of Canadian Artists
 Royal Canadian Academy of Arts
 Royal Architectural Institute of Canada
 Sculptors Society of Canada.

The National Gallery of Canada, Ottawa.—Founded in 1880 by the Marquis of Lorne, the National Gallery at first served only as an exhibition gallery. Provided with an Advisory Arts Council in 1907, and first incorporated under a Board of Trustees in 1913, it has assembled a permanent collection mainly during the past 45 years. This collection of pictures and sculpture, prints and drawings, representing the styles, past and present, of various parts of the world, was assembled for public enjoyment, study, and the improvement of arts and industrial products, and as the necessary basis of a program of art education. The National Gallery Act, amended in 1951, gave the institution a larger Board of Trustees and other advantages.

The collection of the National Gallery today is of international repute and is accessible to the whole country by means of catalogues, photographs, colour reproductions and, to a limited extent, by loans. The Canadian section, naturally the most inclusive, is the best available source for the study of Canadian art. Each year, examples of the best contemporary work are added, along with those of earlier periods. The most important recent additions to the European section were 12 famous old water paintings purchased from the Prince of Liechtenstein's collection.

The National Gallery conducts a program of extension work throughout the country. The majority of its special exhibitions are available to the entire country and are widely circulated. About 30 such exhibitions are toured and as many as 200 separate showings have been held annually under the auspices of the National Gallery of Canada. In addition, individual loans of material from the collection are made to centres in many parts of the country each year. In this way original works of art are constantly being brought to the attention of the public. Sets of reproductions are also sent on tour of localities that have not the facilities for handling originals.

An Industrial Design Division has been set up as the result of public interest in bringing the design of Canadian goods up to the best international standards and in fostering distinctive Canadian designs, and a number of exhibitions on Canadian industrial art have been held in various parts of the country. The Design Centre in the Daly Building, Ottawa, serves as an exhibition centre and as headquarters for the national program in industrial design sponsored by the National Gallery.

Other methods of education in the arts apply more specifically to young people and are designed, in part, to supplement regular school work. The Gallery provides written lectures illustrated by lantern slides on all aspects of art history, reproductions of paintings with introductory texts for art appreciation, school broadcasts, classes for school children

* An account of the Canadian Arts Council and a list of its constituent bodies appears in the 1951 Year Book, p. 308.

† Formed in 1947 with the object of improving the services of museums as educational institutions by promoting co-operation among themselves, by exchange with other countries and by the training and securing of expert staffs.

at the Gallery, exhibitions of children's art, conducted tours of the Gallery's collections and educational demonstrations. Lecture tours by well known authorities are also held throughout Canada.

The National Gallery also maintains a library of art films. The facsimile colour reproductions published by the National Gallery are listed in a leaflet, available on request. The magazine *Canadian Art* (address: P.O. Box 384, Ottawa) in the founding of which the National Gallery took a leading part, has attained a large circulation.

The *Report of the Royal Commission on National Development in the Arts, Letters and Sciences* made recommendations for the extension and improvement of the Gallery's exhibition and education services; increases in funds, staff and facilities; maintenance or increase of appropriations for acquisitions; and a new building containing adequate facilities for display, storage, circulation of exhibitions and conservation of paintings. Many of these recommendations are being carried out and a new National Gallery is under construction; it is scheduled for opening late in 1959.

Further details concerning recent purchases, exhibitions and lecture tours arranged by the National Gallery are contained in the *Annual Report of the Board of Trustees*.

Section 2.—The Educational and Cultural Functions of the National Film Board*

The National Film Board, an agency of the Federal Government, was established by Act of Parliament in 1939 and reconstituted by the National Film Act in 1950. In the years since its establishment, the Board has grown from a supervisory body over Canadian Government motion picture activities to a national documentary film-producing and -distributing organization whose films about Canada are seen wherever people may freely assemble. The Board also produces and distributes filmstrips and still photos on Canadian themes in accordance with its primary function outlined in the Act "to initiate and promote the production and distribution of films in the national interest". Films are produced primarily in the English and French languages, and, whenever possible, foreign language versions are prepared to increase the usefulness of Board films in foreign countries.

The 16mm. community film program in Canada is based on a nation-wide system of film circuits, film councils and libraries, strongly supported by organizations and individuals engaged in community activities. At Mar. 31, 1958, some 478 film councils—voluntary groups promoting the use of documentary films—were serving communities throughout Canada, together with 508 film libraries and depots from which thousands of 16mm. prints are available for public circulation. These prints are acquired by purchase or by loan from the Board.

Slightly more than one-half of the 16mm. community film audience recorded by the Board during the year was reached through classroom showings, indicating further progress in the development of audio-visual aid programs in Canadian schools and universities. Another noticeable trend was the more selective use of films by community organizations and groups for particular purposes. This is attributed in part to the recent availability of Board productions which present series of film studies related to central themes. For example, a series of thirteen films, *The Commonwealth of Nations*, which examined the history and development of the Commonwealth, was given wide promotion and circulation among Canadian schools and study groups following its initial showing over English and French television networks.

Films produced by the Board are shown in commercial theatres and on television in Canada and abroad. Theatrically, films are released in the series *Canada Carries On* and *Eye Witness* (*En Avant Canada* and *Coup d'Oeil* in French), and newsreel features are also regularly issued for theatrical and television purposes. Distribution of theatrical subjects is arranged by contract with commercial distributing organizations.

* Prepared, under the direction of the Government Film Commissioner, in the Research and Reports Division of the National Film Board, Montreal, Que.

An increasing proportion of the Board's production and distribution program is initially concerned with television at home and abroad. Series of original films are shown regularly over English and French language television networks in Canada. In addition, individual films from the Board's extensive general library are available to CBC and privately operated stations. Abroad, because of expanding television facilities in many countries, Board films are seen by audiences which could not otherwise be reached.

In addition to commercial distribution through theatres and television in other countries, 16mm. print circulation is carried on through posts of the Departments of External Affairs and Trade and Commerce, through National Film Board territorial offices in London, England, New York and Chicago in the United States, and New Delhi in India, as well as through libraries operated by various educational agencies. Hundreds of prints of National Film Board films are also sold in other countries each year. Exchange agreements are in effect between the Board and government film-producing organizations in other lands; this means that films of various nations are freely exchanged with Canada, aiding better international understanding.

The National Film Board maintains a library of more than 100,000 still photographs, which are available at nominal cost to magazines, newspapers and other periodicals wishing to present current information about Canada.

Section 3.—The Educational and Cultural Functions of the Canadian Broadcasting Corporation

Many hours of educational or semi-educational programs are broadcast annually by the Canadian Broadcasting Corporation in English and in French. Whether these programs are directed to children or adults, entertainment is combined with information whenever possible. Spoken-word programs cover a very wide range of interests and are presented as readings, talks, discussions, documentary programs, dramatizations or in forms combined with music.

Pre-school Broadcasts.—Though many story programs for pre-school-age children are broadcast purely as entertainment, a special series has been developed to give young children, particularly in remote areas, many of the benefits of kindergarten training. This series, *Kindergarten of the Air*, is broadcast Monday to Friday for children from three and a half to six years of age. Planned with the advice of kindergarten experts, it includes stories, songs, simple games and development exercises, and encourages good habits of hygiene, eating and relaxation.

During the 1958-59 season a new series of television programs for children of nursery school age was presented daily. *Nursery School Time*, the title of the new series, came into being as a result of the enthusiastic reception accorded a similar series presented as a 13-week experiment in the spring of 1958. Produced on alternate days from Toronto and Montreal, *Nursery School Time* is planned by experts in the field of training three-and-a-half to five-year-olds, and provides a TV counterpart for the radio series *Kindergarten of the Air*.

School Broadcasts.—In an average school year, more than 1,000 school programs, mostly in dramatized form, are broadcast to all parts of Canada. The CBC provides facilities for 30-minute daily programs specifically planned by Departments of Education to meet classroom requirements. These are supplementary aids to help teachers stimulate student imagination and strengthen motives for study. The National School Broadcasts series are planned by the National Advisory Council on School Broadcasting to promote among students a stronger consciousness of Canada and its achievements. During the 1957-58 season programs for students in grades 4 to 13 were presented in eight sub-series. The most popular, a nature series for students of grades 4 to 6, was *Voices of the Wild*. Other series were *I Was There*, first-hand accounts of great moments in Canada's history; *The Return of Nanna-Bijou*, concerning the conservation of natural resources; *Julius*

Caesar, a radio treatment of Shakespeare's play; *Music in the Making*, in which radio drama and symphony orchestra were combined to heighten student appreciation of Schubert's work; *Life in Canada Today*, actuality visits to Canadians at work; *Commonwealth Roundup*, radio visits to people living in other Commonwealth countries; and *What's in the News*, a weekly up-to-the-minute commentary on outstanding news events.

An experimental television program for school use was presented during November 1954, and a second series in April 1956. Approximately 1,850 classes with over 60,000 students in all provinces viewed the second series. In the report on teachers' evaluations of this experiment, the National Advisory Council on School Broadcasting concluded that "television has definite value as a teaching aid in the school classroom; the programs should be closely correlated with the curriculum, and further experiments should be undertaken at the local or provincial level".

During 1958 two such experiments were carried out by local and provincial educational authorities in co-operation with the CBC. The Halifax Board of School Commissioners carried out a three-week experiment in which nine programs for use by schools in Halifax and environs were produced by CBC Halifax. The report issued by the Halifax educators arrived at similar conclusions to those of the National Advisory Council on School Broadcasting. The second experiment was carried out by the Manitoba Department of Education. It consisted of six programs for students of grades 7 to 11 in Manitoba schools within the reception areas of Manitoba television stations. Here again, the educators concluded that television in schools can be a valuable teaching aid.

Adult Education.—Programs of an adult education nature are presented frequently by the CBC on its radio and television services. In the planning of these programs co-operation is received from various educational organizations. The CBC is an active participant in the work of the Joint Planning Commission, a body established by the Canadian Association for Adult Education for exchange of information and co-ordination of plans for adult education in Canada.

Radio Programs.—*Citizens' Forum*, which has been telecast for the past three years, is a round-table program on which a panel of informed speakers who hold varying viewpoints discuss important issues of the day. It is arranged jointly by the Canadian Association for Adult Education and the CBC. Its French counterpart, *Les idées en marche*, which is carried on television as well as radio, is planned in co-operation with La Société Canadienne d'Éducation des Adultes. Similar types of programs prepared specially for rural listeners are *National Farm Radio Forum* and *Le choc des idées*, arranged by CBC in co-operation with the Canadian Federation of Agriculture and the Canadian Association for Adult Education. All these forum programs are heard by organized listening groups, which continue the discussion of the topic at the conclusion of the broadcast.

For the past seven summers the evening sessions of the Couchiching Conference have been broadcast. This week-long conference, organized jointly with the Canadian Institute on Public Affairs, examines Canadian and international affairs in open meetings and group discussions. Other programs of an educational nature are *Cross Section*, a series of radio documentaries dealing with economic and social questions; various dramatized series in the field of human relations and mental health; *Science Review*, which examines important discoveries in the field of the natural sciences and their branches; *Business Barometer*, designed to inform listeners of developments in Canada's economic life; *Anthology*, a literary program with emphasis on Canadian writers; *Trans-Canada Matinée*, a daily afternoon program including informative talks and commentaries designed specially for the woman in the home; and *University of the Air*, a series varying from four to eight talks prepared and broadcast by distinguished professors in their specialized fields. On the French network *Les voisins d'en face*, prepared in conjunction with L'École de Parents, presents a series of programs relating to parents and children; and general questions sent in by parents are answered by psychologists in the series *Le Courrier de radio-parents*. For women listeners, the daytime program *Fémina* is presented three times a week.

The French network also broadcasts a number of weekly programs dealing with fine arts, music, literature, theatrical arts, sciences, religion and philosophy, under the auspices of *Radio-Collège*. These broadcasts are not designed for classroom use, being of a more adult nature than the School Broadcasts on the English language networks and scheduled, in the main, for other than school hours. In addition, talks on a wide range of subjects including international affairs, Canadian history and community activities are broadcast regularly over the various networks.

Television Programs.—In addition to *Citizens' Forum*, programs which are carried regularly on both radio and television are *Press Conference*, in which people who make the news are questioned by those who report it; and *Fighting Words*, in which guest experts in various fields discuss controversial quotations sent in by viewers.

Open House, a daily program for women, presents information on a wide variety of commodities and services, and interviews with people of note. Important world news of the preceding week is discussed by a panel each Sunday night on *This Week*. *Explorations*, a series of drama documentaries which examines questions in the fields of sociology and the natural sciences, was one of seven CBC programs to win First Awards at the 1957 Exhibition of Educational Radio and Television Programs at Columbus, Ohio. Programs in the field of parent-education and mental health are also telecast.

Portions of the afternoon sessions of the Winter Conference of the Canadian Institute on Public Affairs were telecast. This three-day weekend conference examined sociological questions in open meetings and group discussions.

On the French network *C'est la vie* investigates various professions and callings; *Pays et merveilles* presents illustrated discussions of life in other countries; and *Profils d'adolescents* considers topics and problems of interest to teenagers.

Section 4.—The Canada Council

On Feb. 15, 1957, the House of Commons passed an Act for the Establishment of a Canada Council for the Encouragement of the Arts, Humanities and Social Sciences. The continuing objects of this body are to foster and promote the study and enjoyment of, and the production of works in, the arts, humanities and social sciences. The expression, "the arts" is defined by the Canada Council Act as: architecture, the arts of the theatre, literature, music, painting, sculpture, the graphic arts, and other similar creative and interpretative activities. The Council, in furtherance of its objects, may (a) assist, co-operate with and enlist the aid of organizations, the objects of which are similar to any of the objects of the Council; (b) provide a scheme of scholarships, fellowships and other grants to persons in Canada for study or research in the arts, humanities and social sciences in Canada or elsewhere, and to persons in other countries for study and research in the same subjects in Canada; (c) make awards to persons in Canada for outstanding accomplishment in the arts, humanities and social sciences; (d) arrange for and sponsor exhibitions, performances and publications of works in the arts, humanities and social sciences; (e) exchange with other organizations or persons and with other countries knowledge and information respecting the arts, humanities and social sciences; (f) arrange for representation and interpretation of Canadian arts, humanities and social sciences in other countries. In addition, the Canada Council may be assigned by the Governor in Council such functions and duties in relation to the United Nations Educational, Scientific and Cultural Organization (UNESCO) as he considers desirable.

The Council is a corporation consisting of a Chairman, a Vice-Chairman and nineteen other members, all appointed by the Governor in Council. The Chairman and Vice-Chairman are appointed for terms not exceeding five years and the other members for terms of three years each. After serving two terms, members of the Council, including the Chairman and Vice-Chairman, are not eligible for re-appointment during the twelve months following completion of the second term. The principal officers of the organization are the Director and the Associate Director, also appointed by the Governor in Council, the Treasurer and the Secretary. The Council is not an agent of the Crown, but its officers and employees are considered to be employed in the Public Service for the purposes of the Public Service Superannuation Act. The Council is deemed to be a charitable organization in Canada.

The continuing work of the Council will be financed by income from a permanent Endowment Fund of \$50,000,000 and by a University Capital Grants Fund of \$50,000,000, both to be paid out of the Consolidated Revenue Fund. The latter Fund and the income it earns will be completely expended by the Council over an unspecified but presumably short period of years. This Fund will enable the Council to make grants to universities and other institutions of higher learning by way of capital assistance in respect of building projects, with the following limitations: (a) a grant for any one project may not exceed one-half the total expenditures made in respect of that project; (b) in any province the aggregate of the grants made may not exceed an amount that is in the same proportion to the aggregate amount credited to the University Capital Grants Fund as the population of the province (latest census) is to the aggregate population of the provinces in which there is a university or other similar institution of higher learning. The Canada Council is also permitted to expend and administer any gifts and bequests it may receive.

To aid and advise the Council in making, managing and disposing of investments under the Canada Council Act, an Investment Committee has been set up consisting of the Chairman of the Council, one other member of the Council designated by the Council, and three members appointed by the Governor in Council. Proceeds from the sale or other disposition of any investments made out of the Endowment Fund or the University Capital Grants Fund are credited to the Fund out of which the investment was made. Investments out of money standing to the credit of the University Capital Grants Fund are made only in bonds or other securities of, or guaranteed by, the Government of Canada.

The Governor in Council appoints a member of the Queen's Privy Council for Canada to whom at the end of each fiscal year the Chairman reports all proceedings under the Canada Council Act for that fiscal year, including the financial statements of the Council and the Auditor General's report thereon. Provision is made for a review of these reports by Parliament.

By Mar. 31, 1958, the Council had made, provided for, or authorized awards as follows: scholarships, fellowships and other awards for 450 persons in the amount of \$860,000, of which about 80 p.c. were for awards in the humanities and social sciences; grants to organizations representing the arts, humanities and social sciences, \$740,000, of which the larger portion was for the arts; grants for capital assistance to universities in respect of building construction projects, \$4,084,300.

Income from the Endowment Fund for the year ended Mar. 31, 1958, was \$2,368,819. Administrative expenditures (including those occasioned by the University Capital Grants Fund, the UNESCO program and the purchase of office furniture and equipment) were \$180,316. Total of authorized grants made from the Endowment Fund was \$1,416,632. Surplus available for carryover into 1958-59 and further expenses, grants and awards was \$771,871.

In accordance with Order in Council dated June 14, 1957, the Council established the National Commission for UNESCO and named 26 members and 30 organizations with "co-operating body status".

Section 5.—Library Services

The National Library.—The National Library of Canada, authorized by the National Library Act of June 18, 1952 (1 Eliz. II, c. 330), came into existence formally on Jan. 1, 1953. The Act provides for the establishment of an Advisory Council consisting of 15 members, including at least one representative from each of the ten provinces; the appointment of a National Librarian, an Assistant Librarian and other personnel. The duties of the National Librarian include the establishment of a National Union Catalogue listing the books in every important collection in Canada; the purchasing of book stock; and the publication of a National Bibliography listing books published in Canada, written by Canadians, or of special interest to Canadians.

Since its establishment, the Library has continued to expand its activities in temporary quarters while awaiting the erection of a new building. The first stage of the *National Union Catalogue*, which lists the holdings of larger public reference, government, university and special libraries, was completed in November 1958. Included were data for two libraries in Newfoundland, two in Prince Edward Island, 19 in Nova Scotia, five in New Brunswick, 14 in Quebec, 73 in Ontario, four in Manitoba, three in Saskatchewan, four in Alberta and 10 in British Columbia.

Statistics on interlibrary loans facilitated by the Catalogue demonstrate its usefulness to scholars and research workers across the country. An average of more than 700 requests a month are being filled, about half of which are dealt with by university libraries, one-quarter by public libraries and the remainder by special libraries and through other sources.

Canadiana, issued monthly, provides an up-to-date inclusive bibliography of materials of Canadian origin and interest for the use of libraries, the publishing trade and others. Altogether, 8,271 items were listed in 1956.

In addition to Canadian books, the National Library is acquiring material in other subject fields, especially in the humanities, music and the social sciences.

Public Libraries.—Library service is provided for the Canadian public by several types of library organization. Free, tax-supported libraries, some with extensive branch systems, serve most of the larger centres of over 10,000 population and about half of the smaller centres served. Non-profit association public libraries, privately controlled and operated, serve a few of the larger centres and the remainder of the smaller centres. Regional libraries, including a number of municipalities and rural areas within each unit, supplement or take the place of independent libraries in smaller centres and are developing rapidly in almost every province. Travelling and open-shelf libraries operated by provincial government agencies and universities serve more remote areas in most provinces by sending out boxes of books by rail, mail, aircraft or boat, and by supplying books to individuals on request.

All types of public libraries are experiencing substantial increases in most forms of activity, particularly in the expansion of services to boys and girls, regional library development and the planning and construction of library buildings—despite the fact that the number of trained librarians available to staff library services remains about the same. The many new library buildings being erected in communities where there were previously

no library services, and the additions and renovations to established libraries, have resulted in this era being described as the most active period of library building since the days of Andrew Carnegie. The style, however, is no longer monumental, but open and inviting, with large windows and entrances through which may be seen the busy attractive interiors.

Regional and semi-urban library developments are making increasing use of book-mobiles and other forms of mobile service to bring books to schools and other community centres.

Canadian children are responding to library services offered to such an extent that library figures show the circulation of books in the boys' and girls' departments to be about half of the total circulation, although the population of the 5-to-14 age group represents only about one-quarter of the total population over five years of age.

Surveys of libraries for the year 1957 included public libraries in centres over 10,000 population, all regional public libraries and travelling and open-shelf libraries serving the public. In 1956 the libraries in larger centres represented 85 p.c. of the population served, 70 p.c. of the bookstock, 82 p.c. of the circulation, 88 p.c. of the expenditures and 90 p.c. of the full-time staff for all municipal and association public libraries. Statistics for these public libraries for 1957 are given in Table 1.

(CENTRES 10,000 POPULATION AND OVER)

SOURCE: D.B.S. SURVEY OF LIBRARIES, 1957

Academic Libraries.—The 1956 survey of libraries included 263 university and college libraries, 171 of which were in institutions classified as French or bilingual, according to the language of instruction. More than 50,000 volumes each were reported by 35 of these, and 67 had full-time library staffs of two or more. New buildings are being provided for many university and college libraries as part of an over-all expansion of university facilities and for this purpose funds from the Canada Council, from private benefactors and from community organizations are being used.

In 1957, only the libraries in universities with full-time student enrolments of 500 or more were surveyed. These libraries represented about 90 p.c. of the full-time enrolment, 55 p.c. of the volumes, 66 p.c. of the expenditure and 73 p.c. of the full-time staff of all university and college libraries, according to 1956 figures. Results of the 1957 survey are given in Table 2.

2.—Summary Statistics of Libraries in Universities with Full-time Student Enrolment of 500 or Over, 1957^a

Salaries of Professional Library Employees.—Public libraries in centres over 10,000, regional public libraries, travelling and open-shelf libraries and university libraries employ most of the professional librarians in the country. Median salaries, based on reports from these libraries for 1957, by type of library and position, are given in Table 3.

3.—Median Salaries of Professional Library Employees, by Type and Size of Library, 1957^a

Position	Libraries in Centres with Populations of—			Regional and Travelling Libraries	University Libraries	Total Professional Employees
	10,000-24,999	25,000-99,999	100,000 or Over			
	\$	\$	\$	\$	\$	No.

Government, Professional, Business and Technical Libraries.—The latest figures available for such libraries are those collected in the survey of 1956. In addition to the summary given in Table 4 it may be mentioned that 45 of these libraries reported collections of films and 68 reported microfilm collections.

**Section 6.—Canada and the United Nations Educational,
Scientific and Cultural Organization**

In the words of its constitution, the purpose of the United Nations Educational, Scientific and Cultural Organization (UNESCO) is "to contribute to peace and security by promoting collaboration among the nations through education, science and culture in order to further universal respect for justice, for the rule of law, for human rights and fundamental freedoms".

Total membership in the Organization numbers 80 states. The structure of the Organization includes three principal organs—the General Conference, the Executive Board, and the Secretariat. The General Conference is the policy-making body. It meets every two years and its main functions are to consider applications for membership, elect the Executive Board, plan the program and approve the budget for the ensuing two-year period.

In accordance with resolutions adopted at the 1956 General Conference held in New Delhi, India, UNESCO is now working actively on three major projects: the extension of primary education in Latin America; scientific research on arid lands; and the mutual appreciation of the cultural values of the Occident and the Orient. The 1958 General Conference held in Paris in November 1958 adopted plans to further these projects and to carry out other activities in UNESCO's program areas of education, natural sciences, social sciences, cultural activities, mass communications, technical assistance and exchange of persons. The Organization's budget for 1959-60 is approximately \$26,000,000. At the Canadian assessment level of 2.96 p.c., Canada's contribution over the two-year period is in the neighbourhood of \$750,000.

In Canada, the Department of External Affairs discharges the responsibilities arising from membership in an international intergovernmental organization. It has the advice and assistance of the Canadian National Commission for UNESCO which was established by the Canada Council in August 1957. The National Commission is the agency responsible for co-ordinating Canadian participation in UNESCO's program both at home and abroad. Twenty-six representatives of voluntary organizations and public bodies constitute the formal membership of the Commission. Part of this membership is chosen on a rotating basis, biennially, from a group of over 40 national voluntary organizations associated with the Commission as "co-operating bodies". The National Commission also has a number of consulting members who represent government agencies. It held its inaugural meeting in February 1958. The Commission's secretariat is located in Ottawa at the Headquarters of the Canada Council.

PART III.—SCIENTIFIC AND INDUSTRIAL RESEARCH

Section 1.—The National Research Council*

History and Organization.—Organized research in Canada on a national basis dates from 1916 when the Government of Canada established the Honorary Advisory Council for Scientific and Industrial Research under a Committee of the Privy Council. Provision was made for the planning and integration of research work, organization of co-operative investigations, postgraduate training of research workers, and prosecution of research through grants-in-aid to university professors. This was the basis of the Council's work from 1916 to 1924.

A Special Committee of Parliament, appointed to study a recommendation for establishing national laboratories, endorsed the proposal and the Research Council Act was revised by Parliament in 1924. Temporary laboratories were secured and research on utilization of magnesian limestone for refractories was carried out so successfully that a wartime industry, established during World War I, was re-established on a large scale. As a result of this achievement the Government, in 1929-30, provided funds for new laboratories.

The National Research Building on Sussex Drive, Ottawa, was opened in 1932, and in 1939 construction was begun of the aerodynamics building on a 130-acre site on the Montreal Road just east of the city. Later, other buildings were erected on this site, including woodworking and metalworking shops and separate laboratories for research on engines, gas and oil, hydraulics and structures. These facilities have since been enlarged and extended and new buildings have been provided for engineering, low-temperature

* Prepared by John R. Kohr, Public Relations Office, National Research Council of Canada, Ottawa.

studies, and high-speed aerodynamics. In 1952 a cosmic ray laboratory, a thermodynamics building, and a large structure to house the Division of Applied Chemistry were added; in 1953 the Building Research Centre was completed. The same year, development began on a new 250-acre site on the opposite side of the road, where the new headquarters for the Radio and Electrical Engineering Division was constructed. In 1958, a unique Fire Research Laboratory was added to this site as part of the facilities of the Division of Building Research. An underpass connects the two areas.

A Prairie Regional Laboratory built on the University of Saskatchewan campus has been in operation since June 1948 and an Atlantic Regional Laboratory, on the campus of Dalhousie University at Halifax, N.S., was opened in June 1952. The Division of Building Research has established one of the most northerly building research stations in the world at Norman Wells, N.W.T. Completing its long-term plan for regional activities, the Division has also established a small Pacific Regional Station at Vancouver, in co-operation with the British Columbia Research Council.

The National Research Council consists of the President, two Vice-Presidents (Scientific), one Vice-President (Administration) and 17 other members, each of the latter group being appointed for a term of three years and chosen to represent industry, labour or research in one of the basic natural sciences. Many of the members are drawn from the science departments of Canadian universities.

The Council's scientific and engineering activities are organized in nine divisions and two regional laboratories, each with its own director. Five laboratory divisions are concerned with fundamental and applied studies in the natural sciences: applied biology, applied and pure chemistry, and applied and pure physics. Three others are devoted chiefly to engineering work—building research, mechanical engineering which includes aeronautics and hydraulics, and radio and electrical engineering. The Division of Medical Research has no laboratories but awards grants-in-aid and fellowships tenable chiefly in the medical schools of Canadian universities.

Links with Industry.—In addition to its basic research foundations, the Council operates a Technical Information Service. Through a trained research staff, using the extensive library facilities available to the Council, it is usually possible to provide any required information at very short notice. A free and constant flow of personnel and information is maintained between the Council laboratories and industrial laboratories, the aim being to have Canadian industry use the Council's laboratories just as the units of a large company use their own laboratories as a source of scientific information and assistance. The Council also undertakes for any firm, under contract, research problems that cannot be solved by private consulting and testing laboratories and, in return, obtains assistance from many companies. The Council has long-standing and intimate contacts of this co-operative kind with many Canadian industries in various fields.

Associate committees were established by the National Research Council early in its history and have been continued to date. Hundreds of specialists have accepted invitations from the Council to serve on committees and have brought their knowledge and experience to bear on the solution of research problems put before them. Members of committees give their time and effort to these special studies without charge and their assistance is a source of great strength to the Council.

Foundation Aspects.—Assisted research grants have been made by the Council since its inception in 1916. These awards are given to heads of university science departments to purchase needed equipment and to employ junior helpers, usually students. Aid of this kind has been of considerable assistance in enabling the universities to put into operation the excellent graduate schools that now exist in Canada. In 1958-59 more than \$5,900,000 was provided out of Council funds for basic research at Canadian universities.

Scholarships and grants-in-aid of research are awarded annually by the National Research Council. Scholarships awarded in science and engineering include Bursaries and Studentships which have values of \$1,000 and \$1,200 respectively for the academic year,

to which a summer supplement of \$800 may be added. In addition, Special Scholarships valued at \$2,000 a year and Postdoctorate Overseas Fellowships at \$2,700 (single) and \$3,500 (married) are offered. The Council also offers Graduate Medical Research Fellowships valued at from \$2,000 to \$5,000 depending upon academic qualifications and research experience. A limited number of Medical Research Associates are also appointed to research positions in the medical schools of Canadian universities. Graduate Dental Research Fellowships are also available. In 1958-59, 338 different awards were made totalling \$522,500.

Since 1948, the National Research Council has awarded Postdoctorate Fellowships in open competition to Canadians and nationals of other countries, which are tenable in the Council's own laboratories. The diversity of training and experience brought to the laboratories by these keen young scientists has had such a stimulating effect on the research effort that the program has been further expanded in recent years; Fellowships are also tenable in the science departments of Canadian universities and in the laboratories of other Federal Government Departments, such as Agriculture, Mines and Technical Surveys, and National Health and Welfare. More than 200 of these awards are being held at the present time, mostly in the fields of chemistry, physics and biology.

Principal Activities in 1957-58

The activities of each Division are described in outline only, with occasional brief examples. The work of the Atlantic and Prairie Regional Laboratories is treated separately at pp. 376-377.

Applied Biology.—This Division's work includes applied investigations related to the national economy, and fundamental studies in microbiology, biochemistry and biophysics as a basis for future application in agriculture, medicine or industry. Because fewer large-scale industries are directly interested in biology, industrial laboratories undertake far less research in the biological sciences than in the physical sciences. Of the wide diversity of biological problems urgently in need of investigation, the Division undertakes those considered to be most timely and most unlikely to receive early attention elsewhere. Much of the work is undertaken in co-operation with industry or for government agencies.

Co-operative work in 1957-58 included statistical studies of the protein content of western Canadian hard red spring wheat at different shipping points; a study of wind chill as a factor in caribou mortality in Arctic regions; an international expedition to investigate the aborigines of Central Australia as examples of adaption of human races to cold climates; and improved design and operating procedure of railway cars for the transport of perishables. Also investigated were the freezing and marketing of poultry, the humane slaughtering of animals, and the applicability of a jacketed cold room, previously developed for storage of frozen commodities, to controlled atmosphere storage of fruit.

Fundamental studies directed to extending the storage life of foods by irradiation, and applied investigations on the effects of irradiation on the rate of development of rancidity in bacon, were begun. Investigation continued on the fast-death factor in a strain of blue-green algae toxic to sheep, cattle and other animals, the transport of sugars and other foodstuffs produced by photosynthesis in plant leaves to other organs of the plant, and the structure and development of plant cells and their constituents.

Other work includes chemical and physical measurements on macromolecules of biological origin, and studies concerning micro-organisms related to the preparation, preservation and spoilage of food. A culture collection of about 3,000 bacteria, yeasts and fungi is maintained.

Applied Chemistry.—The Division of Applied Chemistry is concerned with the best uses of Canadian resources and with chemical problems of wide general interest. While much of the work could be included under the general heading of petroleum chemistry, other subjects of active interest are metallurgical chemistry and corrosion, textiles and detergent, rubber, chemical engineering and high polymers.

Engineering and developmental aspects of individual projects, including several for Canadian industry, have been undertaken. Among these are the oxidation of ethylene to chemical intermediates, the activation of clay used in contact bleaching of oils and the cracking of petroleum oils, sedimentation of suspensions, and potential application of the newly developed spouted solids technique for contacting fluids and solids.

The range of a method for determining the molecular weights of chemical compounds and polymers has been extended to include materials in the molecular weight range 40,000-100,000. The effect of acids and bases on the rates of oxidation of inhibited and non-inhibited liquid hydrocarbon has been examined to gain further information on the mechanism of oxidation of petroleum products.

Preliminary work has been done toward the use of fluorescent and phosphorescent markings on letters for automatic sorting methods. These types of markings avoid many of the difficulties encountered in automatic sorting, and it would appear that a very satisfactory system should result. Work has continued on a thermoplastic rubber adhesive for bonding rubber to metal; this adhesive, derived from natural rubber, is stable and improves with age.

Several interesting new types of textile damage have been studied and synthetic detergents are being examined. The textile laboratory co-operates with the Canadian Research Institute of Launderers and Cleaners to maintain high operating standards in Canadian cleaning establishments. Assistance is given to government departments on problems such as the moth-proofing, rot-proofing and moisture-proofing of textiles. Other work involves problems of applied catalysis, gas phase chemical reactions, effect of high pressures on chemical reactions, heterogeneous catalysis, and physical-organic and analytical chemistry.

Pure Chemistry.—The Division of Pure Chemistry is organized around a nucleus of outstanding Canadian chemists who direct about twice their own number of young postdoctorate Fellows from all over the world. The work consists of long-range, fundamental investigations in the fields of physical and organic chemistry. Although the products of pure curiosity seem far removed from ordinary life the Division's experts are frequently invited to speak to groups of applied chemists and other scientists employed in Canadian industry. They also lecture in universities.

There are thirteen sections in the Division: organic chemistry, mostly on the structure of alkaloids; organic spectrochemistry; organic synthesis; chemical kinetics and photochemistry; mass spectrometry; molecular spectroscopy; surface chemistry and low temperature calorimetry; thermochemistry; activated carbon, inorganic and general chemistry; intermolecular forces and physical properties; fibre research; chemistry of fats and oils; and general physical chemistry.

Applied Physics.—The work in applied physics is divided between research projects likely to be of practical value and the continual development of the fundamental standards on which measurements generally are based. All the fundamental physical standards for Canada are housed and serviced in this Division, which now has primary standards equal to any in the world in the fields of mass, length, light, electricity, temperature and radiation.

Research on methods of establishing standards in new areas where there is as yet no international agreement has received increased attention. Determination of some of the limits of accuracy of the International Temperature Scale in its present form, and investigation of the possibility of replacing some of its fixed points at a later date, is in progress. Work in the Interferometry Section contributed importantly to an international decision late in 1957 concerning the redefinition of the international metre in terms of a wavelength of light.

The Division is also working to meet a sharply increased demand for research to aid industry. Problems of noise abatement involving the development of a special ear defender, and the silencing of suction rolls in paper mills have received considerable attention, and work is under way concerning centrifugal blowers and nail-making machines.

Research on mapping methods particularly suited to Canadian conditions has led to the development of a new instrument called the "Analytical Plotter", which uses electronic computations rather than optical projections for plotting maps from aerial photographs. The instrument is smaller than previous models and involves fewer mechanical components. It also permits correction by electronic computation of all known errors in the mapping process and indicates eventual automation of mapping.

Other problems currently under investigation include measurement of the thermal and electrical properties of a number of ceramics and oxides; detailed studies toward the realization of an improved primary standard of light; assessing the thermal insulation of fabrics in winds; and monitoring of artificial radioactivity in the atmosphere to study the movement of air masses, as part of the International Geophysical Year program.

Pure Physics.—Investigation is under way on cosmic rays, solid state physics, spectroscopy, X-ray diffraction and theoretical physics. The work is on various fundamental problems which do not have immediate application but advance the frontiers of knowledge and supply the basis for further progress in the applied fields.

Much of the cosmic ray work has been associated with the International Geophysical Year. Four cosmic ray stations—at Resolute, Churchill, Sulphur Mountain and Ottawa—provide data used to study intensity variations in relation to theories about the source of cosmic rays and their modulation by interplanetary matter shot out from the sun. The results show interesting differences between long-term intensity variations associated with the sunspot cycle and shorter period changes that sometimes correlate with magnetic disturbances.

The studies of the low temperature and solid state physics group cover three main fields: metals, semi-conductors and semi-metals, and insulators. An extensive experimental study of the transition metals has been completed; a new theory of the processes of strain hardening has been developed and a new type of phase transition in solids has been discovered. Progress has continued in the understanding of compound semi-conductors in terms of crystal structure and chemical bonding; research on the thermal properties of the inert gas solids continues.

The spectroscopy group has continued its investigations of the spectra of simple atoms and molecules; the theoretical physics group has been mostly concerned with general field theories and theoretical nuclear physics. X-ray diffraction work has involved the determination of the crystal structure of several organic compounds and minerals; additional programs have been written for crystallographic computation on FERUT and IBM 650 computers. The X-ray group played a major role in the organization of the Fourth General Assembly, International Congress, and Symposia of the International Union of Crystallography held at McGill University in the summer of 1957.

Building Research.—The search for technical improvements in housing dominates the work of this Division; considerable attention is paid to problems concerning the National Building Code of Canada and to fundamental studies on soil, snow and ice mechanics.

New laboratories for paint research and acoustical research and testing have been provided. A newly installed test floor and structural steel testing frame will enable the structural testing of housing components of all kinds to loads of up to 50 tons at several points. A unique fire research building provides facilities for full-scale wall and floor structure fire resistance tests, chemical and physical laboratories, a special room for carrying out model burns, and space for research into the hydraulic aspects of fire fighting and fire prevention. Fully instrumented fire tests to record in detail fire progress in structures were conducted on eight buildings abandoned in connection with the St. Lawrence Seaway Project.

Special attention has been paid to techniques that permit winter construction, including enclosure of construction projects and use of materials such as precast concrete. Studies in economical housing design have resulted in a standard roof truss, economical

to build and easy to install, which will soon be available to the public. Detailed studies, including construction of modular houses, are being made on standardization of dimensions in building design and materials, called "modular co-ordination".

Building materials research has involved the study of an unusual type of cement aggregate causing accelerated deterioration of concrete, investigations of brick and mortar, and the study of setting mechanisms of plaster. Other wide-scale studies under way include snow and wind loads on buildings; a study of avalanches along the route to be followed by the Trans-Canada Highway, which will also provide information on the mechanical properties of snow; laboratory studies on the strength of floating sheets of ice; and investigations concerning shallow foundations, houses on flat slabs, and problems of swelling and shrinking clay.

Mechanical Engineering.—The work of this Division lies mainly in the fields of mechanics, hydrodynamics (hydraulic engineering and naval architecture), aerodynamics and thermodynamics. Extensive work has been undertaken for a variety of industries and for government departments.

Demands for mechanical engineering research and development have continued, but with a number of important new trends. An extended series of tests for various aspects of the St. Lawrence Seaway has given place to new hydrodynamic investigations of both immediate and long-range application on problems of river and harbour improvement and optimum design of navigation locks and earth-fill dam spillways. Methods of improving paper-making machines gave rise to a laboratory study of the flow of pulp in pipelines to provide an analysis of the mechanics of flow. Towing tests, self-propulsion tests and flow studies were carried out on a variety of ship models, as well as full-scale sea trials and performance analyses of four types of ship.

Several laboratories have increased their theoretical and experimental work on problems of aircraft for short and vertical take-off. Such aircraft appear to be on the verge of practicability, and would prove extremely useful for transport in undeveloped parts of Canada and for certain military purposes.

Investigations continued on highly developed aircraft structures, control systems and engines. Work was begun on such subjects as fluid contamination and high speed gas flow; continuing projects include thrust boosting of jet engines by exhaust reheat, and anti-icing work on turbojet and turboprop engines and helicopter rotor blades.

Recent mechanics developments include the evolution of a suturing device and technique for joining severed blood vessels, and an automatic position indicator for crashed aircraft. The new medical technique was developed in collaboration with two surgeons. It is extremely satisfactory experimentally, even for small blood vessels, and should simplify the implanting of grafts replacing diseased sections of arteries. The crash position indicator, developed with the Radio and Electrical Engineering Division, automatically broadcasts distress signals for roughly a week following a crash and should enable more efficient and economical location of crashed aircraft and survivors. A special tide recorder was constructed for use in Arctic waters.

More advantageous use of Western Canada crude oils in diesel engines and gas turbines is under investigation. Other studies involve work on antifreezes; the detection of ethylene glycol in engine lubricants; and work on jet fuels, aviation gasolines, hydraulic oils and other petroleum products.

Radio and Electrical Engineering.—About half of the Division's work consists of defence projects; the remainder is devoted to fundamental research and engineering development in electronics, electrical engineering and radiophysics. Applications of interest to Canadian industry are given special attention.

Development of electronic aids to navigation continued, with devices such as a transistorized switch for buoy lights, and transistorized buoy flashers. Microwave equipment to provide accurate position-fixing for hydrographic vessels is being developed.

A radar display for visual correlation of radar returns with the flight-planned position of civilian aircraft was made. The aircraft type, altitude, and track designation are shown as a group of letters and numbers moving across the radar presentation in accordance with flight-plan data. A weather radar was installed at Penhold, Alta. This instrument has a 100-mile range and a special antenna and camera-recording system for analysis of potential hail storm centres.

Upper atmosphere research centred around meteor and aurora studies—two of the disciplines of the IGY. A meteor observatory was opened at Springhill, Ont., containing continuously operating meteor radar equipment. Auroral radar units are in continuous operation at four stations, and special 35mm. auroral cameras at nine stations photograph the entire sky once every minute.

The antenna program included work on radar scanners and search antennas, and on navigation and communication antennas. Studies are under way in the fields of electron physics and solid state physics.

An electronic detector of flaws in paper was installed and operated successfully in a paper mill. Work in medical electronics has included the development of electronic and electromechanical ground detectors to detect insulation failures in hospital operating rooms; development of a control system to maintain a predetermined blood pressure in the artificial heart-lung apparatus now commonly used in heart surgery; and a transistorized blood pressure monitor.

Medical Research.*—The chief function of the Division of Medical Research is to make grants and award fellowships in the field of medicine. For the year 1958-59 nine non-recurring equipment grants and 168 grants-in-aid of research totalling over \$766,000 were made to further medical studies in Canadian hospitals and universities. One hundred and twenty-nine grants amounting to \$567,210 were for basic medical investigations (anatomy, bacteriology, biochemistry, pathology, pharmacology, and physiology), and 39 awards in the amount of \$199,261 were in support of clinical studies. Twenty-three awards were to applicants who had not been supported in the previous year.

Twenty-one Graduate Medical Research Fellowships ranging in value from \$3,000 to \$5,000 were awarded to enable medical graduates to obtain further training in fundamental research.

Eight Medical Research Associates were appointed to Canadian universities. Candidates for these awards are holders of doctorate degrees—not necessarily in medicine—nominated by universities which provide them with faculty appointments and research facilities. Medical Research Associates have limited teaching duties, ensuring adequate time for research, and appointments may be retained indefinitely subject to the satisfaction of the Council and the university.

Atlantic Regional Laboratory.—The Atlantic Regional Laboratory studies the preservation and use of food products and some of the problems encountered by secondary industries in the area.

Problems involved in the commercial manufacture of iron and steel are under investigation. Special slip-cast magnesia crucibles have been developed which resist penetration by molten alloys and slags at 1,500° C. This permits study of the kinetics and equilibria of high temperature reactions without serious interference from the container. Attempts are being made to measure the activity of ferrous oxide in molten slags, and of oxygen in steel; analysis of commercial open-hearth slags and measurement of the rate of oxidation of carbon in steel are under way.

A systematic survey of Maritime peat bogs has been completed and their resources of wax, lignin, gums and hemicellulose as potential sources of chemical compounds have been established. The chemical composition of Maritime coast sea water has been examined, complementary to earlier studies on commonly occurring seaweeds of the area.

* See also pp. 384-385.

Fundamental differences in the products of photosynthesis of green, red and brown algae have been established. Methods have been devised for the identification and standardization of agar, which is used by all bacteriologists in the culture of micro-organisms and which is currently manufactured from several species of red algae. Studies have continued on the use of laminarin sulphate (laminarin being readily obtained from brown seaweeds) as a blood anticoagulant.

Studies of Atlantic cod skins, and photo engraving glue manufactured from them, have been undertaken. Cod skin has been found to be rich in collagen, the mother substance of glue. Investigation of the conversion of cod collagen to gelatin is under way.

Several fungi causing the formation of slime in pulp and paper mills have been identified and some commercial fungicides tested. Studies of the deposition of pitch in the mills have continued. Optimum conditions for drying rockweed have been evolved in an experimental dryer, and are being ascertained for kelp and eel grass. Determination of the biochemical changes taking place during cool storage of different varieties of potatoes, and an assessment of chips produced from them, have been completed.

Prairie Regional Laboratory.—Research in the Prairie Regional Laboratory is designed to promote and expand industrial uses for agricultural produce of the prairie region. Together with this applied work, fundamental studies are carried out on the basic chemical structure of agricultural materials and the complicated processes associated with the growth and development of plants and micro-organisms.

A plant biochemistry annex and greenhouse have been completed, facilitating the study of plant growth and the formation of plant constituents under precisely controlled conditions. Chemical processes taking place in plants at different stages of growth will be investigated by means of radioactive compounds.

Increased yields of commercially important products from cultures of micro-organisms are being examined. Work is under way on the production of lysine and other essential amino acids of importance in human and animal nutrition, on antifungal antibiotics, and on alkaloids of value to the pharmaceutical industry.

A mechanical foam breaker has been developed which will enable assessment of the effects of chemical antifoams on industrial fermentations. Studies have also begun to produce smaller, more efficient equipment than that now required for batch type operations in the fermentation industry. A strain of mushroom with a high yield of protein solids has been isolated. Animal feed supplementation trials indicate that the yield contains antioxidant and growth factors which should prove valuable in livestock feeding.

In the field of crop utilization, co-operative studies are under way to examine potential uses of rapeseed oil in grease manufacturing and as a lubricating oil additive. Theoretical and experimental work continued on the drying of wheat. A new method for the direct separation of starch and gluten from wheat flour has been developed. The vital gluten produced contains water soluble sugars and proteins and, when added to low protein flours, produces a strong type of baking flour.

Administration.—Administration of the foregoing laboratories is organized as a Division of Administration and Awards, which exists only to serve the scientist. The five service units of this Division are: Awards and Committee Services (Awards, Committees, Publications, Research Journals); Administrative Services (General Services, Purchasing, Personnel); Information Services (Technical Information Service, Library, Public Relations Office, and Liaison Offices in Ottawa, Washington, D.C., and London, England); Plant Engineering Services; and Legal and Patent Services. The latter group works closely with Canadian Patents and Development Limited (*see p. 107*). An expert on economic research acts as special assistant to the Assistant Director, Information Services.

Section 2.—Research in the Atomic Field*

Atomic Energy of Canada Limited (AECL), a government-owned Crown company, operates Canada's main atomic energy centre near the town of Chalk River, Ont., 130 miles west-northwest of Ottawa. The company has a nine-man Board of Directors that includes representatives of private industry, public and private power companies, and the universities, and is engaged in four main activities: (1) the development of technology for economic atomic power; (2) fundamental scientific research in the atomic energy field; (3) operation of nuclear reactors and separation of nuclear fuels (plutonium and uranium-233); and (4) production of radioactive isotopes and associated equipment, such as Cobalt-60 Beam Therapy Units for the treatment of cancer.

The company is collaborating with the Canadian General Electric Company Limited and The Hydro-Electric Power Commission of Ontario (HEPC) in the building of an experimental atomic power station, to be known as NPD (Nuclear Power Demonstration), near Des Joachims on the Ottawa River, 12 miles above the Chalk River plant. The decision to build NPD followed a power reactor feasibility study, started late in 1953 and carried out by engineers of AECL, HEPC, the Montreal Engineering Company Limited, the Shawinigan Water Power Company, the British Columbia Electric Company Limited, and the Brazilian Traction, Light and Power Company Limited. The power reactor is expected to generate 20,000 kw. of electricity when it goes into operation in 1961. To carry out a development program for a 200,000 kw. power station known as CANDU, Atomic Energy of Canada Limited in 1958 set up a Nuclear Power Plant Division in Toronto. Ontario Hydro and various private companies have contributed staff to the division.

To ensure that the various publicly and privately owned utilities are kept fully informed of the progress being made, the Government set up in 1954 an Advisory Committee on Atomic Power Development on which the various power producers throughout the country are represented. The committee, which meets periodically at Chalk River, studies the research results obtained at that centre, receives complete information on the NPD station and large power reactor studies, and assists in evaluating the economic importance of atomic power in various regions of the country.

In 1955, the Industrial Assistance Office was set up at Chalk River to create an interest on the part of private companies in the possible applications of atomic energy in general and of atomic power in particular.

Development of the Atomic Energy Program.—The program had its beginning in 1942 when it was decided to set up a Canadian-United Kingdom project in Canada, under the administrative control of the National Research Council of Canada. British, French and other European scientists doing nuclear research moved to North America early in World War II to work on an atomic weapon—the possibility of which became evident when the first recognition of nuclear fission was announced in Germany in 1939.

The United States project used the more readily available graphite to moderate its reactors and the project in Canada was assigned the task of trying heavy water as a moderator so that all possible routes to the production of plutonium for bombs would be tried. In 1944 the Canadian-United Kingdom team moved from the University of Montreal, where preliminary studies had been carried out, to a site on the Ottawa River, about five miles from the town of Chalk River.

On Sept. 5, 1945, ZEEP went into operation. It operated at a mere 10 watts but made possible a study of the value of a heavy-water natural uranium system and it has continued to be useful for studies of fuel rod arrangements. Two years later, on July 22, 1947, the NRX reactor went into operation. It was then, and so remained for several years, the most powerful research reactor in the world. NRX still plays a leading role by making possible important experiments relating to the development of atomic power, enabling fundamental properties of atoms and nuclei to be determined, and producing

* Prepared by Clyde Kennedy, Public Relations Officer, Atomic Energy of Canada Limited, Chalk River, Ont.

radioactive isotopes of high specific activity (*i.e.*, the relation of the amount of radiation to a given weight of material). Both the United States and the United Kingdom are, like AECL, using NRX for atomic power studies. This reactor now operates at a power output of 40,000 kw. (a measure of the heat produced).

In 1946 the United Kingdom established its own atomic energy program and in the same year the Atomic Energy Control Act was passed in Canada "to make provision for the control and supervision of the development, application and use of atomic energy". This Act created the Atomic Energy Control Board.

The Chalk River project was operated on behalf of the Atomic Energy Control Board by the National Research Council until 1952 when AECL was established to operate the project on behalf of the Board. A 1954 amendment to the Atomic Energy Control Act requires AECL to report directly to the Cabinet Minister who is Chairman of the Committee of the Privy Council on Scientific and Industrial Research. The Atomic Energy Control Board continues to report to the same Minister.

The next stage in the Canadian program, following the creation of a separate United Kingdom program, consisted mainly of carrying on fundamental research at Chalk River, using the facilities of the two natural uranium heavy-water reactors. The need for a source of higher neutron flux for fundamental research and for engineering studies resulted in the decision in 1951 to build another natural uranium heavy-water reactor known as NRU. This reactor, placed in operation on Nov. 3, 1957, has a heat output of 200,000 kw., five times that of NRX. The NRU reactor has three main functions: the production of significant quantities of plutonium; the provision of advanced experimental facilities for fundamental research and for the testing of power station fuel-coolant systems; and the production of radioactive isotopes of high specific activity, particularly Cobalt-60 which is used in the treatment of cancer.

Activities of the Chalk River Project.—The principal function of this project is to carry out fundamental research and preliminary engineering development. The project provides the data that utilities and manufacturers need for a nuclear power program. The work is carried out by an Administration and Operations group and a Research and Development group. The former is responsible for general administration, the operation of the nuclear reactors and associated chemical process plants, the construction and maintenance of buildings, the provision of steam and auxiliary power for the project, and the correlation of the experience of the operating branches with the results obtained by the research branches to produce engineering information for major projects handled by outside organizations. The activities of the Research and Development group, which cover a wide field of fundamental and applied research in physics, chemistry, metallurgy, and biology, are carried out by five divisions—Reactor Research and Development, Chemistry and Metallurgy, Physics, Biology and Health Physics, and Research Engineering. These divisions conduct short-term and long-term investigations—the short-term to provide the basic information required to design and operate the first Canadian power reactors. A wide variety of possible reactor systems makes it necessary to conduct extensive investigations, both mathematical and experimental, to determine which are likely to be the most economic and efficient. The longer term work, though mainly the responsibility of physicists and biologists, also involves the chemistry of substances which have become important (or have come into existence) only since the development of atomic energy.

The Reactor Research and Development Division is engaged in experiments and calculations required for the design of nuclear reactors for atomic power stations. Control systems for such plants and for the Chalk River reactors are being studied. The ZEEP reactor has been in constant use in determining the reactive efficiency and other characteristics of various fuel element arrangements. Construction began in 1959 of a larger, low-power reactor, known as ZED-2, which will provide information on the physics of reactor cores for studies of power station reactors. Late in 1957, a swimming pool type of reactor

known as PTR (Pool Test Reactor) was put into operation and is used to measure the reactivity of fuel elements both before and after they have been irradiated in one of the high-power reactors.

The Chemistry and Metallurgy Division includes a number of research groups which are making a co-ordinated attack on the problems of the preparation and processing of reactor fuel. The Division develops fuel elements for the NRX and NRU reactors and for power reactors. Experiments are providing essential information on the behaviour and suitability of different physical forms of the fuel, or different kinds of cladding to prevent corrosion of the fuel. Some of the work is being done in collaboration with the Department of Mines and Technical Surveys.

In the Physics Division work has continued on the study of nuclear structure, using the experimental facilities of the NRX reactor and the particle accelerators, such as the 3,000,000-electron-volt Van de Graaff Generator. A 10,000,000-volt machine, known as a Tandem Accelerator, was installed at Chalk River in 1958. This new type machine, which consists of two Van de Graaff accelerators placed end to end horizontally, has made it possible to carry out research programs on heavy nuclei with an accuracy and efficiency never before possible.

The activities of the Biology and Health Physics Division include the control of radiation hazards, the development of decontamination methods, the study of uses of radioactive isotopes in biological research, and the investigation of the effects of radiation on living organisms.

The marketing of radioactive isotopes and associated equipment is handled by the Commercial Products Division of AECL, which has its offices and shops in Ottawa. Canada pioneered in the production of radioactive isotopes and the Chalk River project now produces a variety of isotopes for use in industry, agriculture and medicine. The high flux of NRX enabled AECL to produce relatively large quantities of Cobalt-60, with a high specific activity, for use in cancer therapy units. The combined production of NRX and NRU will be required to satisfy the demand from many countries for Canadian units. By the end of 1958 a total of 133 cancer treatment machines had been installed in 24 countries.

Section 3.—Other Scientific and Industrial Research Facilities

Aside from the work of the National Research Council and Atomic Energy of Canada Limited, Canadian research is carried on by various federal agencies, provincial organizations, universities and industries. Several provinces in Canada have established provincial Research Councils to stimulate and support research on problems having special provincial significance. The universities, of course, form an extremely important part of the Canadian pattern of research. Much of their work is along fundamental lines but practical problems are not neglected, especially those of regional interest.

All three types of institutions—federal, provincial and university organizations—have an interest in problems of industrial significance: this is part of the current Canadian pattern of research. Though many Canadian industries now possess research facilities—some of them quite extensive—the main bulk of industrial research to date has been done under government auspices.

Thus the unique problems of the country, particularly its large area coupled with a small population, have led to a typically Canadian organization of research, of which a very strong associate committee system is perhaps the most distinctive feature.

Subsection 1.—Federal Organizations

Although research by industrial concerns has been slow to develop in Canada, government research has expanded rapidly, at first because of the need for speeding up the production of raw materials, which were for many years the basis of Canada's export trade, and secondly because of the more recent interest in the processing of these raw

materials and the necessity of meeting the needs of national defence. Federal agencies involved in research include the Departments of Agriculture, Fisheries, Mines and Technical Surveys, National Defence, National Health and Welfare, Northern Affairs and National Resources, and Trade and Commerce; the National Research Council; and Crown corporations such as Atomic Energy of Canada Limited. A system of committees, with nation-wide representation, eliminates unnecessary duplication of work from these national research organizations.

The scientific work of the Department of Agriculture is described in Chapter IX of this volume, the work of the Defence Research Board in Chapter XXVI, specialized work in scientific forest research in Chapter X, scientific services concerned with Canada's mineral resources conducted by the Department of Mines and Technical Surveys in Chapter XI, investigational work of the Department of Fisheries in Chapter XIII, research of the Canadian Wildlife Service of the Department of Northern Affairs and National Resources in Chapter I, the work of the National Research Council at pp. 370-377 and atomic research at pp. 378-380. The activities of the other federal agencies engaged in research are described briefly in the following paragraphs.

Department of National Health and Welfare.—The Department of National Health and Welfare supports both intramural and extramural research programs. Within the Department, the Food and Drug Directorate, Laboratory of Hygiene, Occupational Health Laboratory and various clinical services are engaged in scientific research in their respective fields. Special studies and surveys are conducted in social and medical economics by the Research Division. The extramural program consists of grants-in-aid of medical research at universities, hospitals and other research institutions from funds under the National Health Program. The Public Health Research Grant provides over \$500,000 per annum with allocations from the Mental Health, General Public Health, Tuberculosis, Cancer, Child and Maternal Health and Crippled Children's Grants making up approximately \$1,250,000 additional funds. To co-ordinate medical research programs, meetings are held by representatives of the National Research Council, Defence Research Board, Department of Veterans Affairs, National Cancer Institute and the Research Advisory Committee of the Department of National Health and Welfare. These have provided for reasonably clear definitions of the field of interest of each organization and have minimized uneconomical overlapping.

Grain Research Laboratory.—Rapid development of grain production in Western Canada led to the passing, in 1912, of the Canada Grain Act. This Act is administered by the Board of Grain Commissioners, which reports to Parliament through the Minister of Trade and Commerce. The Board is responsible for control of the weighing, grading and warehousing of Canadian grain. Soon after its establishment, the Board encountered problems that required scientific study and a Grain Research Laboratory was established at Winnipeg, Man., in 1913.

The Grain Research Laboratory, with a staff of 50, is the main centre of research on the chemistry of Canadian grains. It is well staffed and equipped to provide the service required to help maintain and expand domestic and foreign markets for all types of grain. The Laboratory collects and tests samples of various crops to obtain information on the current quality of all grains shipped during the crop year and prepares, annually, certain information required by the Board for administering the Canada Grain Act. Fundamental research is also undertaken; the program is directed toward increased understanding of what constitutes quality in cereal grains and towards improving the methods of assessing quality.

Subsection 2.—Provincial Organizations

The fact that only a few provincial research organizations exist does not indicate a lack of interest in research by the provinces. Most provincial governments have university laboratories to consult, particularly about local industrial and agricultural problems.

Agriculture is particularly well covered because of its great importance as an export industry; the network of federal Department of Agriculture laboratories and Experimental Stations, together with agricultural colleges and provincial research councils, provides this industry with a very well developed research service.

Nova Scotia Research Foundation.—This body was created by the Government of Nova Scotia in 1946 to give its people additional scientific and technical assistance in finding new and better ways to utilize the resources of the forest, the sea, the farm, the mine and the process industries. To this end it seeks to correlate and further scientific work on local problems and available resources. It assists universities, colleges, research groups, industries, provincial and federal departments and individuals by loans of equipment, grants, scholarships, laboratory and summer assistants, library, cartographic, photogrammetric and translation services, and technical information. It has supported or collaborated in work on breeding new varieties of plants and root nodule bacteria; on antibiotics, poultry, blueberry culture, coal burning equipment, the constitution and gasification of coal, the non-destructive testing of mine equipment, the utilization of anhydrite, diatomite, fish waste, gypsum, seaweed, slag, slab wood and fertilizing materials. It has conducted geophysical, geological, air pollution, and seaweed surveys as well as forest aphides, forest ecology and genetic studies and assisted studies on the nutrient cycles of lakes, on X-ray crystallography, and on pressures in underground strata. Its Geophysical Division is now equipped to undertake all types of magnetometric, gravimetric, resistivity, seismic and electromagnetic explorations while its Technical Services Division provides an ever-increasing assistance to industries of the province. During the summer of 1957, 104 people were engaged on 31 projects.

Saskatchewan Research Council.—The Saskatchewan Research Council was established in 1947 for "research and investigation in the physical sciences as they affect the economy of the Province of Saskatchewan, and such particular matters as may be brought to its attention from time to time by the Lieutenant-Governor in Council". The term 'physical sciences' is given a broad interpretation to include biology, geology and engineering. Within this field the Council undertakes basic and applied research.

Up to the present the Council has functioned mainly by granting funds for approved research projects and awarding scholarships at the University of Saskatchewan. It has also conducted a technical information service with the assistance of the National Research Council. It has recently entered a new phase and, in addition to its former activities, employs a full-time staff in a new laboratory building located on the University grounds.

Research Council of Alberta.—The Province of Alberta set up a Scientific and Industrial Research Council in 1921, the promotion of mineral development within the province being the chief purpose leading to its establishment. The Council operates under an Act somewhat similar to that setting up the National Research Council and is financed by provincial government appropriations. The present program is directed to the application of basic and applied science toward the development of the natural resources of the province. Investigations include studies on coal, petroleum, natural gas, geological research and surveys, soil surveys, hail studies, irrigation and highway research. The Council maintains a gasoline and oil testing laboratory and has a group of industrial engineers to provide scientific information to developing industry. The Council laboratories, located on the University of Alberta campus, include a \$750,000 research laboratory and pilot plant provided by the Province of Alberta in 1955. The laboratories work in co-operation with the scientific departments of the University and the operations of the organization are controlled by a council of ten individuals representative of government, the University and industry. The various research projects are under the immediate supervision of advisory committees and the chairmen of these committees form the Technical Advisory Committee of the Council, the body responsible for the integration and operation of the scientific aspects of the program.

British Columbia Research Council.—The British Columbia Research Council, under the sponsorship of the provincial Department of Industrial Development, Trade and Commerce, provides a scientific and engineering staff with laboratories on the campus of the University of British Columbia. The objective is to enable even the smallest firms to improve their competitive position in Canadian and world markets by the use of the most up-to-date scientific and technical knowledge. The Council provides three classes of service: a free information service in collaboration with the National Research Council; assistance to specific firms at cost where information cannot be supplied from existing knowledge; and, at the Council's expense, research on problems of general value to the industrial development of the province.

The Ontario Research Foundation.—The Ontario Research Foundation, established in 1928, is financed by an endowment fund composed of subscriptions from manufacturers, corporations, private individuals, and a grant from the provincial government on a dollar-for-dollar basis with the other contributions. The Foundation carries on research to assist agriculture and industry in developing the natural resources of the province. A study has been made of the physiography and climate of southern Ontario and also of the parasites found in wildlife in this province. Many investigations have been undertaken in the industrial field and the Foundation is well equipped to work in metallurgy, textiles, chemistry and biochemistry. The services of the Foundation are at the disposal of industry on a fee basis, and consultative services, testing, short trial studies and long-term investigations have been undertaken for hundreds of firms. The work has resulted in better products and in more efficient processing. The Foundation administers a grant from the provincial government to support postgraduate scholarships and scientific research in the universities of Ontario.

The Hydro-Electric Power Commission of Ontario.—The Research Division of Ontario Hydro, with a staff of 300, provides testing, investigation and research services for all phases of the utility's engineering design, construction work, and system operation and maintenance. The Division maintains close liaison with other research organizations and power utilities, and staff members participate in the committee work of major technical societies and standardizing associations.

Electrical investigations pertain to methods of generating, transmitting, distributing and utilizing power, and to improvement in equipment for these purposes. Among the topics studied are transmission at voltages of 400 k.v. and above; problems of electrical insulation; system operation and control, and system protection against lightning; communications and telemetering; illumination; and power metering. Attention is given to the performance and efficiency of power equipment, to improved measuring techniques, and to means of minimizing the hazards of electric shock.

Among the structural and mechanical topics studied are the following: soil mechanics as related to foundations, roads, and earth dams and dykes; the physical properties of structural components and of numerous items such as conductor joints and line hardware; the mechanical performance and safety features of equipment and various types of machines; metals and metallurgy; welding materials, techniques and applications; atmospheric and underground corrosion of metals; stresses in materials and structures; noise and vibration conditions; and a variety of problems associated with the design, construction and maintenance of concrete structures, the application of masonry materials, and the production, placement and quality control of all concrete used.

In addition to chemical analyses and tests performed on a wide range of materials and products purchased, chemical research work is conducted with regard to such subjects as wood preservation, plastics applications, protective coatings, brush and weed control, lubrication, liquid electrical insulants, water treatment, thermal insulation, and corrosion prevention. Other studies contributory and supplementary to the main branches of work are carried on in the fields of physics, biology, petrology and mathematics.

Subsection 3.—Medical Research

Medical Research Facilities.*—Support for medical research is provided by the Federal and Provincial Governments, by private foundations or corporations, by voluntary agencies which raise money by public subscription, and by universities and hospitals. From these sources there are available (a) research fellowships for training, (b) grants-in-aid for assistance in problems of a fundamental or clinical nature, (c) salaries for trained personnel, and (d) the necessary capital and running expenses for investigations which are of particular interest to government, hospital or pharmaceutical house.

The Departments of National Health and Welfare and National Defence maintain establishments in which research is done in well-equipped laboratories with highly trained personnel. The Department of Veterans Affairs encourages its staff to do research in its own hospitals; much of this concerns chronic illness, such as arthritis, atherosclerosis, metabolic and nutritional derangements (*see pp. 287-289*).

Most of the fundamental medical problems are studied in medical schools through the system of grants-in-aid. Funds from the Federal Treasury are provided through the National Research Council, the Defence Research Board, and the Department of National Health and Welfare. The National Research Council supports mainly research in the basic medical sciences—anatomy, physiology, biochemistry, pharmacology, bacteriology, pathology, and experimental surgery—but 20 p.c. of its grants are for clinical investigations. The Defence Research Board makes grants for studies in which it is particularly interested, such as shock, the preservation of blood and the use of blood substitutes, the effects of low temperatures, etc. The Department of National Health and Welfare provides funds for research, available on the recommendation of provincial departments of health, in the following fields: public health research, tuberculosis control, child and maternal health, mental health, and general public health. It also gives assistance to the Canadian Arthritis and Rheumatism Society (which obtains other support by public subscription) and to the Ontario Heart Foundation (which derives its other resources from the Ontario Provincial Government). In addition the Department of National Health and Welfare makes available to the provinces cancer grants, out of which the provinces may supplement the funds for research which the National Cancer Institute receives from the Canadian Cancer Society. Thus the Department of National Health and Welfare is the Canadian agency which gives the greatest support to extramural research in medicine; its interest is primarily in those problems that have a direct bearing on the health of the nation rather than in fundamental research.

Universities receive funds for research also from provincial branches of the Canadian Cancer Society and from such government foundations as the Ontario Cancer Treatment and Research Foundation and the Alcoholism Research Foundation, from fraternal societies and clubs such as the Rotary Club, from the J. P. Bickell Foundation, the Atkinson Charitable Foundation, the Canadian Life Insurance Officers Association, the Muscular Dystrophy Associations of Canada, the Banting Research Foundation, the Multiple Sclerosis Society, pharmaceutical companies, etc. At several universities, individual investigators also receive grants in aid of research from various granting bodies in the United States of America.

With help from these diverse sources, active research programs are in progress in every one of the twelve Canadian medical schools. In certain of these there are special departments devoted to research, e.g., the Departments of Medical Research at the University of Toronto and at the University of Western Ontario, and the Department of Investigative Medicine at McGill University; these departments contain graduate students who work to higher degrees. With few exceptions, departments designed for undergraduate instruction are active in research; a majority provide graduate instruction as well, in which the students are maintained on research fellowships or grants.

* Prepared by Dr. J. Auer, Assistant Director, Division of Medical Research, National Research Council, Ottawa.

Notable contributions to medical knowledge are made every year by Canadian scientists, but space permits the mention of only a few fields: studies on epilepsy at the Montreal Neurological Institute; functions and interrelations of areas in the brain and brain stem and studies in neurophysiology and neurochemistry at McGill University, the University of Ottawa and the University of Western Ontario; endocrine and metabolic studies at McGill University and the Universities of Montreal, Toronto, Western Ontario and Manitoba; anticoagulants at the University of Saskatchewan; atherosclerosis and hypertension at McGill and Queen's Universities and the Universities of Western Ontario and British Columbia; hypothermia at the University of Toronto; surgery of heart and blood-vessels at McGill University and the Universities of Toronto and Montreal, and the Montreal Institute of Cardiology; tuberculosis at Dalhousie University, the Institute of Microbiology, Montreal, and the Connaught Medical Research Laboratories, Toronto; mental health studies at the Department of Health, Nova Scotia, the Allan Memorial Institute at McGill University, the University of Toronto, Regina General Hospital and the University of British Columbia; virology, including poliomyelitis, at the Institute of Microbiology, Montreal, the Sick Children's Hospital, Toronto, and the Connaught Medical Research Laboratories; bacteriology, immunity and hypersensitivity at McGill University, the University of Montreal, Queen's University, the University of Western Ontario and the University of Toronto; cancer in all the medical schools.

Connaught Medical Research Laboratories.—The Connaught Medical Research Laboratories, University of Toronto, were established for the advancement of preventive medicine and public health through research and through the preparation of biological and other products essential in prevention or treatment of certain diseases. The Laboratories render a medical public service to all the provinces of Canada and, to an extent, to countries abroad. This service was initiated when the preparation of diphtheria antitoxin was undertaken in the Department of Hygiene at the University in an effort to reduce the toll of deaths from diphtheria in Canada. At the same time, the Department initiated investigations into this and other diseases. Since then, research activities have constantly expanded and today more than seventy studies are being conducted in the Laboratories.

The research program of the Laboratories concerns the broad field of preventive medicine. By including the study of certain animal diseases, particularly those which are transmissible to man, and through preparation of related products, the Laboratories are serving both the medical and veterinary professions.

The research projects are extensive and include studies of bacterial and virus diseases, investigations in immunology, epidemiology, physiology, biochemistry, and in other fields related to preventive medicine. These undertakings are maintained in part through the distribution of products, the furnishing of which constitutes an important public health service. Also important to the advancement of public health is the assistance rendered by the Laboratories in the postgraduate teaching of medical officers of health, nurses, dentists, veterinarians, and other professional personnel. From the inception of the Laboratories in 1914, members of the staff have been closely associated with postgraduate teaching in public health. In 1924, through the beneficence of the Rockefeller Foundation and with the co-operation of the government of the Province of Ontario, the School of Hygiene was established. This provided greatly enlarged teaching facilities and also extended the participation of the Connaught Medical Research Laboratories in the work of training public health leaders.

On the University campus the College Division of the Connaught Medical Research Laboratories and the School of Hygiene share one building, permitting of joint use of research and laboratory facilities of the two institutions, and promoting a close and mutually advantageous relationship. Here also the production of insulin and other glandular products is undertaken. On Spadina Crescent in Toronto, the Spadina Division of the Laboratories provides accommodation for much important work including the

production of penicillin and research in the field of antibiotics. Additional facilities are provided near Toronto at the Dufferin Division and include a 145-acre farm property with modern laboratory buildings and quarters for animals.

Through the organization of the Western Division in the University of British Columbia, the Connaught Medical Research Laboratories have shared in the development of an important program of research in preventive medicine on the Pacific Coast.

Thus for over forty years the Connaught Medical Research Laboratories, with the co-operation of the medical profession and the official public health authorities, have contributed in steadily increasing measure to the advancement of research and public health in Canada.

The Banting Research Foundation.—The Banting Research Foundation supports the work of the Banting and Best Chair of Medical Research in the University of Toronto and aids medical research throughout Canada by making grants-in-aid to those who submit problems of sufficient medical interest to the Board of Trustees. The Board meets and makes grants usually three times a year, around June 1, Oct. 1 and Feb. 1. Five members of the Board of Trustees are appointed by the Board of Governors of the University of Toronto and the Alumni Association of the University of Toronto, and these five members appoint two other Trustees, then the seven members appoint an eighth Trustee.

Subsection 4.—University Research

Canadian universities and colleges subscribe to three basically essential aims, though with varying degrees of emphasis: (a) the diffusion of knowledge through sound teaching, extension and evening classes and written reports, (b) the conservation of knowledge and its reorganization and (c) the extension of the boundaries of knowledge through research. Most undergraduate courses attempt to provide a basic understanding in a number of subject fields with more extensive knowledge in one or more of these. The graduate courses provide a wider and deeper appreciation and understanding in a limited field through advanced courses, seminars and individual research. Practice in the research methods of the disciplines, using experiment, questionnaire, logic of the subject, or statistics is intended to prepare students capable of adding to present knowledge.

Research in the universities was first undertaken to obtain knowledge for its own sake, or pure research. It was soon recognized that this provided basic information on which applied science rests and it was followed through. More recently the universities, because of their unique position in having trained specialists and equipment, have undertaken emergency and other contractual research. The trend to pursue all three has been expanding rapidly, creating new problems but also providing greater opportunities for undertaking sizable tasks that could not have been considered otherwise. Broadening of the field of research has indirectly been responsible for increasing the capacity of the universities to educate advanced students and has occasionally improved the quality of their education through providing large-scale equipment otherwise beyond the ability of the institution.

Research presently undertaken in the universities falls into three broad categories: projects undertaken by the student under the guidance of a professor or committee to meet requirements for an advanced degree; that undertaken by the professor, which may be of a more or less continuous nature; and larger research projects undertaken co-operatively on a faculty or interfaculty basis in the university laboratories or in such specialized institutions connected with the university as medical research laboratories, institutes of microbiology and hygiene, science service laboratories and faculties of agriculture.

Some idea of the increase in research undertaken by Canadian universities is obtained from a comparison of the situation in 1919 (when two universities—Toronto and McGill—offered graduate courses beyond the master's degree and graduated 11 students) with the situation in 1957. In the latter year Ontario had four, Quebec three and six other provinces

each had one major university with graduate facilities. They conferred 281 doctorates in course, distributed by fields as follows: biological sciences, including medical and agricultural sciences, 83; engineering and applied science, 13; humanities, 45; physical sciences, 110; and social sciences, 30. Subject matter covered in these and reports of other research conducted by university professors and reported in professional journals is encyclopaedic and reflects specialization and variety. Outstanding research in different fields has become associated with various universities, for example: nuclear research and geophysics in McGill, Queen's, McMaster and Saskatchewan; medical research in such institutions as the Connaught Laboratories and the Montreal Neurological Institute; agricultural research in the western universities; and fisheries research in British Columbia.

Outside financial support for university research comes primarily from four sources: Departments of the Federal Government including the National Research Council and Defence Research Board which provide grants for approved and contracted government-sponsored research; industry which supports both basic and applied research; private foundations which provide grants for approved research, sometimes in selected fields; and provincial governments.

Subsection 5.—Industrial Research

Industrial research in Canada is changing very rapidly. In the past, industry in general was largely unaware of the value of research to its own development and to that of the country, partly because many Canadian companies were subsidiaries of companies in the United Kingdom and the United States and partly because small companies found it impossible to finance their own research. The problem was accentuated by the vast size of the country, the absence of concentration of similar industries and the proximity to the relatively large research facilities of the United States.

However, the emergence of Canada as a highly industrialized society, its entrance into multitudinous fields of production, the rapid growth of many large nation-wide industries, the serving of a discriminating domestic market and the meeting of competition from abroad have had the effect of making Canadian manufacturing establishments research conscious and many of the larger ones now possess competent research organizations. The fields covered by some of these industries are outlined in the 1956 Year Book at pp. 386-389. The research work of the Canadian Pulp and Paper Association, an independent corporation combining efforts of government, university and industry in the expanding field of pulp and paper research, is described in the Forestry Chapter of this volume.

Industrial Research-Development Expenditures in Canada, 1957.—A survey was conducted in 1958 of some 2,800 of the larger industrial firms in Canada in an attempt to measure the extent of the research program being undertaken and to obtain an indication of its direction. From this survey, information was secured on the cost of research programs carried out by Canadian companies in 1957—both direct expenditures and cost of purchasing research-development results from affiliates or from other companies or organizations located in Canada and in foreign countries. Data were also secured on the principal fields in which the research was carried out and on the number of research personnel employed. The magnitude of the research-development costs in 1957 and the increase planned for 1958 give an indication of the size of the program and the direction in which business is searching for new products, for new and more efficient processes and for improvements to existing products and techniques.

The research-development program was reported by industry as totalling \$149,000,000 in 1957 and was estimated at close to \$161,000,000 in 1958. Of the total expenditure in 1957, the major part—amounting to \$125,000,000—was conducted within the companies reporting, an additional \$20,000,000 was spent for research-development done outside Canada, mainly in the United States, and the remaining \$4,000,000 was spent for research done by other companies or organizations in Canada.

1.—Research-Development Expenditures, by Industry, 1957 with Estimates for 1958

Industry	Research Expenditures 1957	Estimated Research Expenditures 1958	Increase or Decrease
	\$	\$	p.c.
Mining, quarrying and oil wells.....	6,279,487	5,260,671	-16.23
Manufacturing—			
Foods and beverages.....	1,883,122	1,976,940	4.98

Other manufacturing ¹	1,808,351	2,349,419	29.92
Transportation, storage, communication and public utility operations.....	3,898,800	4,171,300	6.99
Other non-manufacturing ²	3,091,896	3,051,372	-1.31
Totals.....	149,144,079	160,999,559	7.95

¹ Includes tobacco and tobacco products, leather products and miscellaneous manufacturing, construction, health services, engineering and scientific services and trade associations.

² Includes

The following estimates of research-development in the various fields of activity in 1957 show that mechanical, electrical and "other" (mainly aeronautical) engineering, chemistry and metallurgy together accounted for almost 80 p.c. of the total. Expenditures in all engineering fields combined accounted for almost 65 p.c. of the total. Every industry reported some activity in mechanical engineering and at least one other phase of engineering research and also in the chemical research field.

2.—Research-Development Expenditures, by Field of Research, 1957

Field of Research	Amount	Field of Research	Amount
	\$		\$
Chemical engineering.....	10,078,282	Geology, geophysics and other earth sciences.....	1,621,535
Civil engineering.....	935,371	Metallurgy.....	12,879,038
Electrical engineering.....	22,300,993	Medicine.....	2,473,357
Mechanical engineering.....	39,843,632	Agriculture.....	421,383
Other engineering.....	23,438,084	Other.....	4,688,988
Chemistry.....	20,328,760		
Physics.....	10,134,656		
		Total.....	149,144,079

Arrangement of industrial-research expenditures by size group based on annual sales of research-active firms shows that the larger firms with annual sales in excess of \$50,000,000 accounted for the major part of the expenditures, although this size group included only 12 p.c. of the firms maintaining research establishments.

3.—Research-Development Expenditures, by Size Group, 1957

Size Group ¹	Firms	Research-Development Cost	Percentage of Total
	No.	\$	
\$50,000,000 or over.....	57	108,116,078	72.49
\$10,000,000 to \$49,999,999.....	131	22,028,562	14.77
\$ 1,000,000 to \$ 9,999,999.....	221	14,774,187	9.91
Under \$1,000,000.....	46	4,225,252	2.83
Totals.....	455	149,144,079	100.00

¹ Based on annual sales value in 1957.

During 1957 the equivalent of 4,448 professionally trained scientists were employed on research-development projects. The three top industrial groups, in terms of numbers of professionally trained employees, were transportation equipment, electrical apparatus and supplies and chemical products, which together accounted for almost 63 p.c. of the total professional employment in the research field.

Classification of the professional scientists by field and degree of training reveals that for all types of engineers engaged in research there is a greater predominance of professional employees with bachelor degrees. On the other hand, medical scientists, geologists, geophysicists or other earth scientists, chemists, administrators, physicists and agricultural scientists have a greater percentage of the professional employees engaged in research work with doctorate or master degrees than in the engineering field or in the over-all pattern.

In addition the reporting companies employed the equivalent of 7,263 supporting personnel on research-development work, of whom 3,737 were research-development technicians, 802 were skilled craftsmen and 2,724 were other supporting personnel. The average ratio of supporting personnel to professional scientists or engineers for firms conducting research-development was about six to one.

4.—Professional Research-Development Scientists Employed, classified by Field and Level of Training, 1957

Field of Training	Level of Training			Total
	Bachelor	Master	Doctorate	
	No.	No.	No.	No.
Chemical engineers.....	399	53	51	503

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Agriculture is one of Canada's leading primary industries and is of particular importance to the economy of the country. Special articles that have appeared in previous Year Books dealing with the historical development of agriculture and with significant features of that progress are listed in Chapter XXVII under the heading "Special Material Published in Former Editions of the Year Book".

Section 1.—Federal Government in Relation to Agriculture*

The federal Department of Agriculture dates from Confederation. It was established in 1867 as an outgrowth of a Bureau of Agriculture set up in 1852 by an Act of the Legislature of the Province of Canada. The Department derives its authority from the British North America Act, 1867, which states in part that "in each province, the legislature may make laws in relation to agriculture in the province" and that "the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the legislature of a province relative to agriculture, shall have effect in and for the province as long and as far as it is not repugnant to any Act of the Parliament of Canada".

A Department of Agriculture with a Minister of Agriculture at its head was accordingly established as part of the Government of Canada. Departments of Agriculture headed by provincial Ministers of Agriculture were also set up by the provincial governments, except in the Province of Newfoundland where agricultural affairs are dealt with by the Agricultural Division of the Department of Mines and Resources. The agricultural affairs of the Yukon and Northwest Territories are administered for the Federal Government by the Territorial Division, Northern Administration and Lands Branch, Department of Northern Affairs and National Resources.

* Prepared under the direction of Dr. J. G. Taggart, C.B.E., Deputy Minister of Agriculture, Ottawa.

Subsection 1.—Services of the Department of Agriculture

Broadly speaking, the activities of the Department of Agriculture may be grouped under three headings: research, promotional and regulatory services, and assistance programs. Research work is aimed at the solution of practical farm problems through the application of fundamental scientific research to all aspects of soil management and crop and animal production. Regulatory services are directed toward the prevention or eradication of crop and livestock pests, the inspection and grading of agricultural products and the promotion of sound policies for crop and livestock improvement. Assistance programs cover the sphere of soil and water conservation, price stability, and a degree of crop insurance and income security in the event of crop failure. The Department employs a staff of about 9,000 persons.

A new departmental organization, effective from Apr. 1, 1959, provides for a re-grouping of the various units into branches concerned with the broad lines of activity mentioned above. This change supersedes an organizational framework that has been in effect since 1937 and is an effort to bring the Department more closely in line with present-day needs.

The main features of the plan are the establishment of a Research Branch that will integrate the former Experimental Farms and Science Services; the incorporation of the Marketing Service and Production Service into one unit to be known as the Production and Marketing Branch; and the establishment of an Administration Branch that will take care of departmental administration and will also embrace the Information Division and the Economics Division, the latter formerly associated with the Marketing Service. Ultimately, and subject to legislative approval, a fourth branch may be established to embrace conservation and rehabilitation activities and possibly other new lines of work. Each Branch is to be headed by an Assistant Deputy Minister.

Research Branch.—The Research Branch is the principal research agency of the Department. It conducts a broad program of scientific investigation covering both basic studies and practical attacks on agricultural and forest biology problems. There are seven Research Institutes at Ottawa. Three Research Institutes, six Regional Research Stations, three Regional Research Laboratories, 27 Experimental Farms, 22 Laboratories, two Forest Nursery Stations, and 17 Substations are located throughout the ten provinces and the Yukon and Northwest Territories. In 1958 the Central Experimental Farm at Ottawa was extended by some 4,000 acres.

The Research Branch serves all principal agricultural and forest areas in Canada and co-ordinates its efforts with the National Research Council, universities and kindred agencies. One staff, under the new organization, will be charged with the planning and co-ordination of the program and another with the administration required to carry it out. Five directors representing divisions of animals, crops, soils, entomology and plant pathology, and forest biology will assist the programming of the work. The three research services of Statistics, Engineering and Analytical Chemistry—located with the Administrative and Executive group at Ottawa—will provide research groups across the country with specialized leadership and service and undertake critical researches or other creative work as required.

The Institutes.—The Institutes are organized on a scientific rather than a problem basis and are engaged primarily on basic research of wide application to agriculture and forest biology. They also carry out related national work such as the identification of plants, insects and pathogens. There are seven Institutes at Ottawa and one each at London, Belleville and Sault Ste. Marie, all in Ontario.

The Animal Research Institute covers the fields of genetics and breeding, nutrition, physiology, biochemistry and management, and tackles problems in the production of milk, beef, lamb, pork, poultry, eggs and fur.

Plant studies are carried out at the Plant Research and the Genetics and Plant Breeding Research Institutes in taxonomy, physiology, biochemistry, pathology, agrometeorology and weeds, and fruit and vegetable processing and storage. Cytological and genetic studies on cereal, forage, tobacco and horticultural plants are made by the Genetics and Plant Breeding Research Institute with special reference to problems encountered in the breeding programs and the assessment of quality characteristics.

The staff of the Soils Research Institute is engaged in studying genesis and classification, fertility, mineralogy and the organic, physiochemical and physical aspects of soils. This Institute gives leadership to the federal-provincial soil survey program through classification studies and by developing and standardizing analytical methods. It also provides a national soil mapping service.

A major section of the Entomological Research Institute deals with taxonomy, other assignments being in the fields of genetics, physiology, nematology and apiculture. The Institute assembles and maintains the national collection of insects.

The Microbiological Research Institute is mainly concerned with metabolism, nutrition and genetics of bacteria of agricultural significance.

The Dairy Technology Research Institute investigates problems in sanitary milk production and the processing of dairy products and undertakes projects to improve existing dairy products and to develop new ones.

The Biological Control Research Institute at Belleville, Ont., is concerned with efforts to control destructive insect pests and noxious weeds with parasitic and predaceous insects, and with insect disease organisms. It is also the principal importing centre for beneficial insects and for some disease organisms from foreign countries.

The Insect Pathology Research Institute at Sault Ste. Marie, Ont., is the major importing centre for disease organisms. Insect diseases, including viruses, fungi, bacteria and protozoa are studied.

The Pesticide Research Institute, London, Ont., established in 1951, examines chemicals used or intended to be used for insect, disease or weed control and investigates the reason for and the nature of the biological activity of the chemical.

The Regional Institutes, Stations and Services cope with primary problems in various regions in all provinces. General agriculture in the Northwest Territories is being studied. Nine major laboratories are working on forest and shade trees, and on forest products diseases and pests in conjunction with provincial forest services and the forest industries.

Other units have undertaken projects assisting in the exploitation of peat bogs, reclamation of marsh land for pasture, propagation of shelter-belt trees and prevention of soil erosion, dryland agriculture, the growing of special crops such as tobacco, and live-stock breeding.

The Research Laboratory at Winnipeg, Man., has a world-wide reputation for its contribution in the field of cereal rusts and is the national centre for investigations concerning insects in stored products.

Production and Marketing Branch.—The Production and Marketing Branch represents a consolidation of the former Production Service and Marketing Service and also includes the Agricultural Stabilization Board and the Agricultural Products Board. The regulatory functions of the Department of Agriculture are thus centred in one branch.

The Health of Animals Division of the Branch administers the Animal Contagious Diseases and the Meat Inspection Acts, and also operates Animal Pathology laboratories. Besides its responsibility in carrying out various disease prevention measures, the division operates programs for the eradication of bovine tuberculosis and brucellosis and gives health certificates for livestock export trade. The Animal Pathology laboratories, in addition to their research function, manufacture diagnostic reagents and biological products and provide analytical and diagnostic services for domestic and wildlife diseases. District laboratories across the country give routine diagnosis and research services.

The Livestock Division administers the Livestock Pedigree Act, Record of Performance for dairy cattle, beef cattle and swine, supervision of race track betting, the grading of meat, wool and fur and the compiling and interpreting of market information.

The Poultry Division carries out the policies of the National Poultry Breeding Program, including Record of Performance for poultry and hatchery inspection, and administers the regulations for the grading of poultry products.

The Fruit and Vegetable Division administers legislation having to do with the grading of fruit and vegetables in both fresh and processed form.

The Dairy Products Division is responsible for the administration of legislation covering grades and standards of dairy products, including butter, cheese, dried milk and ice cream.

The Plant Products Division administers acts and regulations respecting seeds, feed-stuffs, fertilizers and pest control products and conducts field inspection and maintains regional testing laboratories.

The Plant Protection Division is responsible under the Destructive Insect and Pests Act for safeguarding against the introduction of serious plant insects or diseases into Canada or their spread in Canada, for certifying freedom from disease and pests in plant exports, and for seed potato certification.

The Consumer Section helps to promote proper use of Canadian agricultural food products through experimental work carried on by its home economists on cooking foods and preserving perishables.

The Transportation and Storage Section administers the Cold Storage Act dealing with the payment of subsidies for the construction of public cold storage. Cargo inspectors at the main Canadian ports check the handling of goods moving to export.

Agricultural Stabilization Board.—The Agricultural Stabilization Board, consisting of three members, administers the Agricultural Stabilization Act which came into effect in March 1958, replacing the Agricultural Prices Support Act. There is also an advisory committee of ten farmers or farm organization representatives. The new Act requires mandatory support for nine commodities—cattle, hogs, sheep, cheese, butter, eggs, wheat, oats and barley—the last three covering only the cereals produced outside the jurisdiction of the Canadian Wheat Board.

Stabilization assistance may be provided by purchase of the commodity at the prescribed price level, by deficiency payment to make up the difference between the average market price and the prescribed price, or by other payment for the benefit of producers to maintain a prescribed price. Mandatory stabilization prices must be at least 80 p.c. of the average market prices for the ten previous years. Any natural or processed product may be designated and support prices for designated commodities may have any percentage of the base price used in establishing the level of support. Local conditions and cost of production are taken into account in the support price which stands for a period of 12 months.

The total net costs of the Agricultural Prices Support Board up to the end of March 1958 amounted to \$100,073,260. The extensive buying and selling by the Government after the outbreak of foot-and-mouth disease in 1952 resulted in a United States embargo on Canadian hogs and cattle, and accounted for a loss of \$70,000,000. The remaining \$30,000,000 resulted from costs of various programs since 1946 in support of apples, potatoes, dried white beans, extracted honey, dry skimmed milk, cheddar cheese, creamery butter, shell eggs and fowl. The new Board took over storage stocks of 68,000,000 lb. of poultry and dairy products and 88,754 cases of eggs.

The Board was authorized to support Canada First Grade creamery butter from May 1, 1958, for a period of 12 months on the basis of 64 cents per lb. Montreal, approximately 107 p.c. of the ten-year average base price. On Oct. 10 stocks were approximately 88,000,000 lb. compared with 34,000,000 lb. a year earlier. Cheese was similarly supported at a higher level than the ten-year average price. On May 1 the Government offered 33½ cents

per lb. for Quebec cheese at Montreal and 34 cents per lb. for Ontario cheese f.o.b. warehouse, equivalent to 110 p.c. of the average. The Board bought about 15,000,000 lb. and released most of it later for export at a cost of more than \$500,000.

Price support on dry skimmed milk was reduced as at May 1, 1958, and the Board bought 62,000,000 lb. before placing a delivery quota in late September on milk which could be offered for purchase. Some 18,000,000 lb. were disposed of by gift and sale up to Oct. 10.

Shell eggs were supported from May 5, 1958, on the basis of 44 cents per doz. Grade A large, graded and packed at Montreal. The Board purchased about 350,000 cases of eggs from January through June 1958, nearly all of which had been sold by the end of October. Fowl and frozen whole-egg stocks were reduced substantially during the period up to Oct. 10.

The Board was authorized to support, during 1958, British Columbia tomatoes, processed raspberries and apples, asparagus, honey, apricots, processed peaches, soybeans, sugar beets, Prince Edward Island potatoes, and wool. Support on turkeys, granted under the Agricultural Prices Support Act, was continued.

Agricultural Products Board.—The Agricultural Products Board, first established in 1951 under the Emergency Powers Act, was reappointed under the Agricultural Products Board Act dated Jan. 23, 1952. The Board was established for the purpose of selling or delivering agricultural products pursuant to any agreement made by the Government of Canada with any other government or agency, and to buy, sell or import agricultural products.

Administration Branch.—Besides its general responsibility for the business management of the Department, the Administration Branch embraces the division concerned with Information and Economics. For the present, rehabilitation and assistance programs are also associated with this Branch.

The Organization and Personnel Division is responsible for all matters pertaining to personnel, pay and benefits, promotion competitions, staff relations, and the over-all establishment and estimates for the whole Department. The Property and Finance Division is responsible for property, buildings and equipment management practices; the carrying out of the Financial Administration Act; and the provision of centralized purchasing and services.

The Economics Division collects, analyses and interprets economic information required to form and administer departmental policies and programs. It conducts economic surveys and research designed to improve agricultural production, marketing, and farm living conditions. The Division acts as an economic and statistical research agency for the Agricultural Stabilization Board, the Prairie Farm Rehabilitation Administration and other bodies, assisting in any economic undertaking with which the Department is concerned.

The Information Division gathers and publishes information arising from research work and the development and regulatory programs of the Department, giving direct service to the public, agricultural extension and research workers. It employs all the recognized media—printed publications, press and radio releases, motion pictures and television. In addition, the Division operates the central library of the Department and a system of field libraries located at major research centres of the Department across Canada.

Subsection 2.—Farm Credit and Assistance

The Federal Government has made provision for the extension of credit to farmers under the Canadian Farm Loan Act and under the Farm Improvement Loans Act. Cash advances are made to grain producers under the terms of the Prairie Grain Advance

Payments Act. Certain financial assistance in event of crop failure is provided by the Prairie Farm Assistance Act. These measures are discussed in detail in the following paragraphs.

The Canadian Farm Loan Act.—Under this Act, long-term farm mortgage credit is available to Canadian farmers through the agency of the Canadian Farm Loan Board established in 1929. Loans are made to buy farm land, livestock and farm equipment, to make farm improvements and to pay debts and operating expenses.

The Board makes first mortgage loans repayable on an amortization plan with equal annual payments for periods not exceeding 30 years and in amounts up to \$15,000 and up to 65 p.c. of the appraised value of the farm taken as security. Funds for lending are borrowed by the Board from the Minister of Finance at current interest rates and are re-lent to farmers at a slightly higher interest rate sufficient to pay the cost of funds and administration expenses. The Board's authorized capital, fixed at \$4,000,000 by amendment passed on Mar. 28, 1957, was increased to \$6,000,000 by a further amendment passed on Aug. 7, 1958. The Board's borrowing power is limited to 20 times the amount of its outstanding capital subscribed by the Government of Canada.

In the year ended Mar. 31, 1958, the Board approved 3,702 loans for a total of \$21,278,450 as compared with 2,921 loans for \$13,978,700 in the preceding year. The amount approved, an increase of 52 p.c., is the largest amount approved in any year since the Board commenced lending in 1929. The average loan was \$5,748 as compared with \$4,785 in the preceding year. Approximately 63.4 p.c. of the total was approved to buy land and pay land-secured debt. At Mar. 31, 1958, the total amount outstanding in loans was \$68,490,523, an increase of \$14,742,159 over the preceding year. This amount was secured by 22,494 mortgages and 1,364 second mortgages.

1.—Loans Approved and Disbursed under the Canadian Farm Loan Act, Years Ended Mar. 31, 1949-58

NOTE.—Figures for previous years are given in the corresponding table of former Year Books beginning with the 1940 edition.

Year Ended Mar. 31—	Loans Approved					Loans Paid Out

The Farm Improvement Loans Act.—The Farm Improvement Loans Act, administered by the Department of Finance, is designed to provide intermediate-term credit and a type of short-term credit to enable farmers to equip, improve and develop their farms. There is scarcely anything a farmer needs in the way of mechanical aids for his farm operation or his home for which a loan may not be made. Assistance may also be obtained for the purchase of livestock, principally foundation or breeding stock; for installation or repair of farm electrical systems; for repair, alteration or construction of farm buildings, including the home; and for fencing, drainage and other development projects. Credit is provided on security and terms suited to the individual borrower.

The chartered banks are the lending agency under the Act. The legislation, originally operative for three years 1945-47, has been extended from time to time for three-year periods. The Federal Government guarantees each bank against loss up to 10 p.c. of the total loans made by it during the period. This guarantee does not apply to any loan made after the aggregate of all loans made by all banks in a given period reaches an amount fixed by statute. In 1956 the Act was extended for a further three-year period commencing Apr. 1, 1956, and ending on Mar. 31, 1959. The aggregate of loans for this period, affected by the guarantee, is set at \$300,000,000. By Dec. 31, 1957, 1,005 claims amounting to \$618,134 had been paid under the guarantee since inception of the Act.

Loans may be obtained for terms up to ten years with interest not to exceed 5 p.c. The maximum amount to be advanced to a borrower at any one time was increased to \$5,000 by the legislation of 1956. The borrower must provide from 10 p.c. to 40 p.c. of the cost of his project or purchase, depending on the loan category to which it belongs.

By Dec. 31, 1957, \$597,487,162 or 82.6 p.c. had been repaid of the total loans made. The position at that date was as follows:—

Period	Loans Outstanding	P.C. of Total Loans Outstanding
1945-48.....	8,780	0.03
1948-51.....	477,589	0.4
1951-53.....	2,925,092	1.5

Prairie Grain Advance Payments Act.—This Act, which came into force on Nov. 25, 1957, provides for an advance payment to producers for threshed grain (wheat, oats and barley) in storage other than in an elevator and prior to delivery to the Canadian Wheat Board, exclusive of grain deliverable under a unit quota. Advance payments of 50 cents per bu. of wheat, 25 cents per bu. of oats and 35 cents per bu. of barley are made, subject to certain restrictions as to quota and acreage. Maximum advance payment per application is \$3,000.

At Dec. 31, 1958, the following advance payments had been made:—

<i>Period</i>	<i>Applications</i>	<i>Total Advance</i>	<i>Average Advance</i>
	No.	\$	\$
Aug. 1, 1957—July 31, 1958.....	50,412	35,203,467	698
Aug. 1, 1958—Dec. 31, 1958.....	39,569	30,717,854	776

Repayment is effected by deducting 50 p.c. of the initial payment for all grain delivered subsequent to the loan, other than for grain delivered under a unit quota. The amounts deducted are paid to the Board until the producer has discharged his advance.

At Dec. 31, 1958, refunds had been made as follows:—

<i>Period</i>	<i>Total Refunded</i>	<i>Total Advance Outstanding</i>	<i>Percentage Refunded</i>
	\$	\$	
Aug. 1, 1957—July 31, 1958.....	35,003,656	199,811	99.4
Aug. 1, 1958—Dec. 31, 1958.....	9,327,651	21,390,203	30.3

Prairie Farm Assistance Act.—The Prairie Farm Assistance Act, passed in 1939, provides for direct money payments by the Federal Government on an acreage basis to farmers in areas of low crop yield in the Prairie Provinces and in the Peace River area of British Columbia. The object of the Act is to assist the provinces and municipalities to meet, in times of crop failure, relief expenditures which would normally be too great for them to assume.

Payments for the 1957 crop year at July 31 totalled \$17,731,295. They were allocated as follows: Manitoba, \$1,716,239 in 7,744 awards; Saskatchewan, \$9,908,372 in 33,362 awards; Alberta, \$5,735,887 in 19,778 awards; and British Columbia, \$370,797 in 1,258 awards.

Among the conditions under which payments are made to farmers is a requirement that 1 p.c. of the purchase price of all grains (wheat, oats, barley and rye) marketed in the Prairie Provinces be paid to the Federal Government and set aside for the purposes of the Act. For the crop year 1957-58 this levy produced \$6,114,475. Since 1939 levies have raised \$107,311,190 and PFAA has paid out \$204,353,900 in 954,110 awards.

Subsection 3.—Canada's Relationship with FAO

The Food and Agricultural Organization of the United Nations, currently consisting of 77 member governments, was created for the purpose of promoting national and international action to improve the efficiency of the production, processing, distribution and utilization of all food and agricultural products, with the aim of assisting all countries to raise the levels of nutrition and standards of living of their people. It collects and disseminates information to help its member governments and others who wish it, to improve their methods of cultivation, fishing, forestry, marketing, agricultural credit and so on.

The Conference of the FAO meets every two years and its Council, representing 24 member nations (the number is to be increased to 25 by 1960), meets about twice a year or whenever necessary. The Conference reviews the world situation in food, agriculture, fisheries and forestry as well as the operation of the FAO Secretariat. The Council, meeting more frequently, keeps an eye on price trends and supplies.

The actual day-to-day work of the Organization is carried out by five technical divisions located in Rome: Agriculture, Fisheries, Forestry, Nutrition and Economics. FAO has regional offices in each of five broadly defined regions. There is a Latin American region with headquarters at Santiago, Chile, serving the needs of the whole of the Central and South American Continent; a Far Eastern region centred at Bangkok; a Near Eastern region with headquarters at Cairo; and a North American region, for Canada and the United States, centred at Washington. The fifth regional office, set up in 1958 to service the African Continent, has headquarters in Accra, Ghana. There are also a number of committees consisting of technicians from member nations who are interested in specific problems. These include a Committee on Commodity Problems, a Committee on Land and Water Utilization, a European Forestry Commission, a Committee on Locust Control, Fisheries Councils and an International Rice Commission. From time to time working parties are convened to deal with problems of immediate interest.

FAO's current operating resources are approximately \$16,500,000 a year, including about \$8,000,000 allocated to FAO from the United Nations technical assistance fund. The staff numbers 1,750; of the 800 professional personnel, 475 work in the field in over 50 countries and territories and in the regional offices and sub-offices.

Technical Activities.—FAO acts as an instrument of collaboration in the effort to control pest and disease. Throughout the Near and Middle East, international control and prevention measures, co-ordinated by FAO, are aimed at controlling locusts. The European Commission for the Control of Foot-and-Mouth Disease, created in 1952 under FAO auspices, is working toward the complete eradication of the disease. Another field for greater international action is in the development of river basins and watersheds affecting several countries. Along with other UN agencies FAO is studying the Mekong Valley's land and water development potentialities, at the request of the Governments of Vietnam, Cambodia, Laos, and Thailand.

FAO's direct action consists largely of technical assistance through supplying experts and training activities. Funds for technical assistance are contributed by governments and allocated to FAO and other specialized agencies from a Central United Nations Fund. Fellowships are provided for the training of officials and technicians from the under-developed countries so that they may assume more responsibility for their own programs; more than 1,400 fellowships have been provided since 1951 and a series of regional centres have provided training for nearly 3,000 persons on specialized subjects.

Commodity Review.—The work of the FAO Conference, the Council and the Committee on Commodity Problems in the commodity field may be summarized as follows: (1) making a periodic review of the commodity situation; (2) providing a forum for discussing problems, exchanging views, and studying national policies; (3) sponsoring specialized commodity study groups; (4) reviewing proposals for action and making recommendations; (5) publishing reports on commodity policies and developments; (6) co-operating with other international commodity agencies in the preparation and review of commodity situation reports and in considering proposals for action programs.

A major activity is the study of the problem of commodity surpluses by the Sub-Committee on Surplus Disposal located in Washington which is concerned with ways and means of using surpluses to establish national food reserves and/or to finance economic development in under-developed countries. Special aspects of the surplus problem are also the concern of other FAO commodity groups such as the Group on Grains which has undertaken study of the causes of the present imbalance in the wheat and coarse grains situation and the commodity groups concerned with rice, copra, cocoa and dairy products.

Canada and the FAO.—Canada's interest in the FAO goes back to the days of the Hot Springs Conference. The United Nations Interim Commission on Food and Agriculture was established by this Conference and was headed by a Canadian. It laid the groundwork for the first FAO Conference which was held at Quebec City in 1945. In

the same year the Canadian Parliament passed the Food and Agriculture Organization of the United Nations Act which provided for the carrying into effect of the "Agreement for a Food and Agriculture Organization of the United Nations between Canada and certain other Nations and Authorities". This Act approves the Constitution of the Food and Agriculture Organization and empowers the Governor in Council to make such appointments, establish such offices, make such Orders in Council and do such things as appear to him necessary for carrying out the provisions of the Constitution.

Canada is a member of the Council, the Committee on Commodity Problems (CCP), the Consultative Sub-Committee on Surplus Disposal, and the FAO Group on Grains, and is participating in a number of working parties sponsored by the FAO dealing with a variety of problems.

Nearly 100 Canadians have been on FAO technical assignments since 1951. For some of these experts there were repeat performances. Others have been invited to participate on panels of experts dealing with nutrition, plant protection, forestry and fisheries. A number of Canadians are on the staff at Headquarters in Rome.

Early in 1946 member nations were invited to establish the National FAO Committees to maintain liaison between FAO Headquarters and their respective governments. In accordance with this request a Canadian Interdepartmental FAO Committee was formed to provide a link between the FAO and the Canadian Government on questions pertaining to FAO. The Committee is composed of senior government officials representing the Departments of Agriculture, Fisheries, Northern Affairs and National Resources (Forestry), National Health and Welfare (Nutrition), Trade and Commerce, External Affairs, Finance, and the Dominion Bureau of Statistics.

Section 2.—Provincial Governments, in Relation to Agriculture*

Subsection 1.—Agricultural Services

Newfoundland.—Government agricultural services in Newfoundland are operated by the Agricultural Division of the Department of Mines and Resources. The Division is in charge of a Director who is assisted by a staff of 21 officers. For purposes of administration, the province is divided into nine districts. A fieldman with permanent headquarters is located in each district except Labrador, where the officer is resident for the summer only. Officers in charge of different phases of agricultural development visit each district on assignments from the St. John's office.

Departmental policies in support of the agricultural industry include: assistance in the clearing of land with government-owned and -operated tractors; a bonus of \$125 an acre on land cleared by privately owned equipment; the distribution of ground limestone at a subsidized rate; the payment of bonuses on purebred sires; and financial assistance to agricultural societies, marketing organizations and exhibition committees. An inspection service is provided for poultry products, vegetables and blueberries, production of the latter being encouraged by the burning of suitable berry areas and the improvement of roads and trails leading to them. Small fruit development is promoted through the distribution of quality foundation stock.

Every encouragement is given to the production of livestock. An experimental sheep flock is maintained. Poultry and beef production have increased with favourable marketing conditions and with departmental assistance and loans under the Provincial Farm Development Loan Act. A veterinary supervises the health of animals program and the joint federal-provincial project for the eradication of bovine tuberculosis.

The Agricultural Division co-operates with the Department of Education in furthering the 4-H Club movement in the province and accepts responsibility for all projects pertaining to agriculture.

* Information supplied by the agricultural authorities of the various provinces.

Prince Edward Island.—The activities of the provincial Department of Agriculture are suggested by its staff which includes, in addition to the Minister and Deputy Minister, a Dairy Superintendent and Assistant, two Check Testers, a Director of Veterinary Services and six subsidized practicing Veterinarians, a Horticulturist, a Soil Analysis Assistant, a Poultry Director, an Economist, an Agronomist, a Director of Field Work and three Agricultural Representatives, a Chief Forester and Assistant, a Director of Farm Improvement, a Nursery Supervisor, and a Director, an Assistant Director and two Extension Workers of Women's Institutes.

Nova Scotia.—The Department of Agriculture and Marketing endeavours to "help the people to help themselves" through strengthening member interest in such organizations as the Nova Scotia Federation of Agriculture, Nova Scotia Fruit Growers' Association, various agricultural co-operative organizations, credit unions and producer organizations. The Department is assisted by the Nova Scotia Advisory Committee on Agricultural Services which has been established to promote agricultural policies and projects of the federal and the provincial Departments of Agriculture. The Committee meets quarterly to determine how the work of these Departments may be co-ordinated and directed through integrated agricultural policies and with a minimum duplication of services.

New Brunswick.—Provincial government agricultural policy in New Brunswick is directed by the Department of Agriculture. The Department is headed by the Minister of Agriculture who is assisted by a Deputy Minister and the Directors of the following services: extension, livestock, dairy, veterinary, poultry, horticulture, field husbandry, plant protection and promotion, agricultural engineering, home economics, Credit Union Co-operative Association, agricultural education, apiculture, and agricultural societies.

Quebec.—The Department of Agriculture of Quebec comprises 11 services: rural education, rural economy, extension, animal husbandry, horticulture, field husbandry, information and research, home economics, animal health, rural engineering, and the secretariat. Each service is divided into sections dealing with particular problems.

The Department also includes many other special organizations such as the Research Council, the Dairy Industry Commission, the Dairy School of St. Hyacinthe, the Provincial Extension Farm (Deschambault), the Fur Bearing Animals Extension Farm (St. Louis de Courville). The Farm Credit Bureau, the Quebec Sugar Refinery (St. Hilaire) and the Provincial Veterinary School (St. Hyacinthe) are also under the authority of the Minister of Agriculture and the Office of Rural Electrification is connected with the Provincial Executive Council.

The annual competition for the Agricultural Merit Order, organized in 1890, is held successively in each of five regions. Each contest lasts five years and covers various farm products; its objective is to ascertain the personal merit of the competitors who have most distinguished themselves in the agricultural field and can serve as examples. County Farm Improvement Contests have for 30 years promoted better methods of culture designed to increase farm income and 7,380 competitors have benefited from them.

The Drainage Service deals with soil improvement or land reclamation by dredging the large watercourses with its own equipment or under contract and by renting equipment at very low rates to farmers who wish to improve their croplands. The Department of Agriculture also gives assistance to such projects in the form of grants. Soil improvement measures include large drainage projects carried out by the Department and smaller projects carried out by groups of farmers with government help. In 1957, 42,497 farmers benefited from help given by this service.

Various forms of assistance are offered towards improvement of crops and livestock. An artificial insemination station operates at St. Hyacinthe for the benefit of breeders' clubs, and plant breeding stations for cereal and forage crops, vegetables and small fruits are maintained in a number of localities. Trained specialists are employed in the work of controlling plant and animal pests and diseases; the main laboratories are situated at Quebec City and field laboratories are located in other districts.

Agricultural co-operation is widespread in Quebec. There are 513 co-operatives with over 69,000 members and 89 agricultural societies with 28,241 members to serve local interests and organize county exhibitions. There are also 730 Cercles de Fermières (Women's Institutes) in operation with a membership of 41,000; 421 farmers' clubs with a membership of 19,924, and 145 junior farmer clubs where 4,600 young boys and girls are working on numerous practical agricultural projects.

The Farm Credit Bureau was established in 1936. By December 1957 the Bureau had made 58,819 loans to the farmers amounting to a total of \$154,000,000; 25,011 of these loans were for the establishment of young men on farms.

Ontario.—The Ontario Department of Agriculture provides financial assistance and administrative services to agriculture through its Head Office, nine branches, three experimental farms, two demonstration farms, and through research and extension work carried on at the four educational institutions under its administration. Head Office, in addition to general administration, administers policies providing assistance to farmers and settlers in northern Ontario in connection with land breaking and clearing and improvement of farms and livestock.

The Live Stock Branch promotes livestock improvement policies, gives support to purebred livestock associations, and licenses artificial insemination centres, community sales, wool warehousemen and egg grading stations.

The Field Crops Branch assists in the development of good cultural practices and promotes the use of improved strains of seed, the improvement of pastures, and the eradication of weeds.

The Dairy Branch provides an inspection, instruction and supervision service to all dairy factories and promotes the production of clean milk on farms. The Milk Industry Board of Ontario under the Milk Industry Act, 1957, as part of the Dairy Branch administration, regulates and supervises the marketing of milk and cream.

The Farm Economics and Statistics Branch carries on research in farm business including cost analysis, marketing, and land use. In co-operation with the Dominion Bureau of Statistics, it gathers and publishes statistics of agricultural production.

The Markets Branch administers the Farm Products Marketing Act; the Farm Products Grades and Sales Act; the Co-operative Loans Act, 1956; the Grain Elevator Storage Act, 1958; and the Farm Products Containers Act.

The Agricultural and Horticultural Societies Branch gives assistance to agricultural and horticultural fairs and exhibitions, ploughing matches and other competitions, and administers the Community Centres Act.

The Extension Branch carries on an educational and extension service through agricultural representatives located in all counties and districts and gives direction to 4-H Club work and the Ontario Junior Farmers' Association. Through the Home Economics Service, the Extension Branch gives leadership and direction to organized activities of rural women.

The Information Branch prepares and distributes—through press, radio, television, and publications—information of value to producers and consumers of Ontario farm products.

The Ontario Junior Farmer Loan Branch administers the Junior Farmer Establishment Act, 1952.

The Horticultural Experiment Station at Vineland, the Western Ontario Agricultural School and Experimental Farm at Ridgetown, the Kemptville Agricultural School, the Ontario Agricultural College including Macdonald Institute, and the Ontario Veterinary College at Guelph, all under the administration of the Department, provide research and extension services to Ontario Agriculture. Demonstration farms are operated at New Liskeard and at Sault Ste. Marie in northern Ontario. Both farms are used to demonstrate methods adaptable to the area concerned; present emphasis is on beef cattle production.

The Ontario Department of Agriculture is responsible for the administration of the Ontario Telephone Authority.

Manitoba.—The Department of Agriculture serves Manitoba through the following branches: agricultural extension; livestock; dairy; soils and crops; agricultural publications and statistics; weeds administration; co-operative services; and the provincial veterinary laboratory.

The Extension Service deals with agricultural economics, horticulture, poultry, agricultural engineering, beekeeping, 4-H Clubs and women's work, and has specialists devoting attention to these subjects. Meetings, field days and short courses are held. Thirty-five agricultural representatives are located throughout the province, each serving from one to five municipalities; twelve home economists serve designated areas.

The Live Stock Branch administers the Animal Husbandry Act, develops and administers policies that encourage the improvement and production of livestock, and works in close co-operation with the Veterinary Laboratory Service and the federal Health of Animals Division in the control of livestock diseases.

The Dairy Branch administers the Dairy Act, supervises the grading of cream, inspects creameries and cheese factories, gives instruction in cheese and butter making, issues licences to makers of dairy products and to cream graders and conducts a dairy-cost study among milk producers. Extension activities include addressing meetings and preparing articles and leaflets on dairy farm problems.

The Soils and Crops Branch deals with grain and forage crops, conservation and fertility and provides liaison between the Government of Manitoba and the Government of Canada in regard to PFRA projects. The Branch develops and administers policies that encourage good field crop husbandry and conservation practices.

The Agricultural Publications and Statistics Branch publishes and distributes annually approximately 100,000 bulletins, circulars, posters, leaflets, etc.

The Weeds Administration Branch directs the activities of 18 municipal weed control units comprising 70 rural municipalities engaged in eradicating deep rooted, persistent, perennial weeds; supervising weed demonstrations; investigating weed problems; conducting weed surveys; and preparing weed literature, radio addresses, articles, pictures, mounted weed specimens, etc.

The Co-operative Services Branch takes care of the registration and supervision of co-operatives and credit unions and the administration of the Acts governing them. The Branch also collects and compiles statistics on co-operative activity throughout the province.

The Veterinary Laboratory operates a diagnostic laboratory for animal diseases, the services of which are available to veterinarians and livestock owners.

Saskatchewan.—The Saskatchewan Department of Agriculture is organized in the following branches and services.

The Administration Branch handles general staff records and accounts. Data on crop conditions, production, marketings and income are collected and farm information dispensed daily over seven private radio stations.

The Agricultural Representative Service has a field staff of 37 agricultural representatives, four area supervisors and specialists in farm management, farm mechanics, and visual aids. An extension field staff is provided for all Branches of the Department as well as for the other agencies operating within the Co-operative Agricultural Extension Program. Agricultural representatives are active in all federal, provincial and university farm services. In farm labour matters co-operation is maintained with the federal Department of Labour and the National Employment Service in directing annual movements of farm labour in and out of the province. Agricultural representatives work through Agricultural Conservation and Improvement Committees in each rural municipality and local improvement district to supply the farmer with scientific and practical information.

Committees study local farm problems and initiate improvement programs. Through an Earned Assistance Program the Department pays one-half the cost of local group development projects.

The Animal Industry Branch has four divisions. The Dairy Division administers dairy herd improvement programs and assists producers with management and production problems; inspects and licenses dairy manufacturing and frozen-food locker plants; and administers dairy, locker plant and margarine legislation. The Livestock Division encourages the use of suitable animals for breeding purposes by the establishment of purebred sire areas and by assistance in the purchase and distribution of stallions, bulls, boars and rams. It registers brands, licenses livestock dealers and agents and promotes programs on insect control, feeding and management. The Poultry Division maintains flock testing and turkey grading services; administers an approved hatchery policy; licenses produce dealers and poultry buyers, hatcheries and hatchery agents. It also assists with poultry shows and field days and otherwise promotes flock improvement. The Veterinary Division assists students in veterinary science under a scholarship plan, administers disease testing and vaccination programs and co-operates with Federal Government officials and local veterinarians in disease prevention and control.

The Conservation and Development Branch provides engineering services for irrigation development, usually in co-operation with the Federal Government, and for drainage programs and projects. Reclamation of land by drainage, development of misused land and under-utilized land, and construction of provincial community pastures all come within its jurisdiction. The Branch provides engineering assistance to conservation and development areas, water users' districts, and irrigation districts in connection with water control projects.

The Lands Branch administers all Crown, school and Land Utilization Board lands except forest reserves and parks in the settled area of the province; classifies it according to the use for which it is best suited; disposes of such lands under long-term leases; secures land control for land utilization projects; supervises new settlement projects and operates provincial community pastures.

The Plant Industry Branch organizes and administers programs for crop improvement and crop protection, and advises on seed and crop improvement, soil conservation, horticultural problems, weed control and management of irrigated land. The improvement of grassland is promoted through a forage crop program. The Seed Plant Division carries on custom cleaning of forage seeds and registered cereals. The Apiary Division advises on beekeeping and honey production, supervises and carries on continuous inspection.

The Agricultural Machinery Administration, established in 1958, carries out a testing service on farm machinery as well as an inspection service, and licences dealers in farm machinery.

Alberta.—The Alberta Department of Agriculture is organized in the following branches and services.

The Field Crops Branch administers programs and policies relating to crop improvement, soil conservation and weed control, crop protection and pest control, horticulture and apiculture. Agricultural Service Boards have been organized in municipal districts to assist with agricultural programs, and the Department of Agriculture is represented on each Board.

The Live Stock Branch aids in maintaining the quality of herds and flocks by assisting farmers in securing purebred herd sires and assists artificial breeding associations in the breeding of dairy cattle. The Branch also supervises livestock feeder associations and administers legislation relating to stock inspection, brands, domestic animals and the sale of horned cattle.

The Dairy Branch administers the Dairymen's Act and the Frozen Food Locker Act. Grading and purchasing of raw produce by all dairy plants are under regulation, as are standards of construction, manufacture, processing, sanitation, and temperature control for dairies and frozen food lockers. A regular cow-testing service is available to dairy

producers and the Branch laboratory conducts chemical and bacteriological analyses needed for industrial directives. Yearly cost studies and dairy farm management services are in operation in the principal milk-producing areas.

The Poultry Branch carries on programs for the improvement of poultry husbandry and supervises flock approval for the control of pullorum disease. The Branch issues hatchery, wholesale, first receiver and truck licences for the handling of poultry products.

The Veterinary Services Branch provides scientific diagnoses of livestock and poultry diseases through its laboratory; conducts investigations of disease conditions; lectures in veterinary science at the University of Alberta, Schools of Agriculture, and many meetings; and promotes government policies aimed at reducing losses throughout the province.

The Agricultural Extension Service operates 43 offices and employs the services of 56 district agriculturists and 20 district home economists. The district agriculturists assist farmers with their problems and advance departmental policies designed to improve the standard of agricultural practices. The district home economists provide a similar service for farm women. Bulletins are prepared dealing with agricultural and home economics topics. The Branch is responsible for the supervision of agricultural societies and, in co-operation with the federal Department of Labour, is concerned with recruitment and placement of farm labour.

The Fur Farms Branch administers the licensing and exporting of live animals and pelts, and assists fur farmers in care, management and stock improvement.

Schools of Agriculture and Home Economics are operated at Olds, Vermilion and Fairview (*see* p. 408).

A Radio and Information Branch conducts five broadcasts a week over seven radio stations and issues weekly bulletins to press and radio.

The Water Resources Branch deals with water rights, drainage, irrigation, and water power development.

The Land and Forests Utilization Committee, composed of representatives from the Department of Lands and Forests, Power Commission, Department of Municipal Affairs, University of Alberta and the Department of Agriculture, deals with the proper use of submarginal agricultural land.

Credit is made available to young farmers for the purchase of farm lands under the Farm Purchase Credit Act.

British Columbia.—The Department of Agriculture has four main branches. The Administrative Branch is responsible for the general direction of agricultural policies, administration of legislation affecting agriculture and for the compilation of reports and publications. This Branch also maintains direct supervision of the Field Crops, Soil Survey, Plant Pathology, Entomology, Apiary, Markets and Statistics, Farmers' Institutes and Women's Institutes Branches.

The Livestock Branch engages in the promotion and supervision of the livestock industry and provides veterinary services affecting disease control regulations as well as supervising stock brands, inspection of dairy and fur farm premises, and inspection of beef grading. The Branch also supervises the operations of the Dairy Branch in the inspection of commercial dairy premises. Officials are stationed at 11 centres throughout the province.

The Horticulture Branch supervises fruit, vegetable and seed production, and provides advice on plant diseases and insect pest control. The Branch maintains field offices at 11 points in the southerly section of the province.

The Agricultural Development and Extension Branch offers general information services to farmers through 19 offices which cover all major farming districts. In addition, this Branch provides agricultural engineering service, supervision of the government land clearing program, farm labour services and promotion of junior club projects. The Poultry Section offers extension services to the poultry industry.

Subsection 2.—Agricultural Colleges and Schools

All provinces provide facilities or assistance for training in agricultural science at university level. The colleges and schools are administered by either the Department of Agriculture or the Department of Education of the respective province.

Newfoundland.—There are no agricultural colleges in the province, but the Agriculture Division of the Department of Mines and Resources provides a number of scholarships annually for young men to attend agricultural colleges in other provinces.

Prince Edward Island.—A two-year course in scientific agriculture offered at Prince of Wales College, Charlottetown, prepares students for third year at Macdonald College, Que. In the Vocational School, short courses provide knowledge and skill in agricultural pursuits and develop in the student a sense of the dignity and importance of agriculture as a calling and an understanding of the value of the industry to the province.

Nova Scotia.—The Nova Scotia Agricultural College at Truro offers two courses: the first two years of a degree course in agriculture; and a two-year course in vocational agriculture. The College assists in conducting short courses at various provincial centres, supports Folk Schools and gives direction to 4-H Club organizations. Tuition is free for Canadian students.

New Brunswick.—The four agricultural schools of New Brunswick are located at Woodstock, Fredericton, St. Joseph and St. Basile. Two-term agricultural courses extending over five months each year are offered at Fredericton, St. Joseph and St. Basile and a three-year course is conducted at Woodstock. The curriculum includes training in all phases of agriculture, shop and general academic work. Ten-month home economics courses are also offered at Woodstock and St. Joseph.

Quebec.—Four-year university courses leading to a degree of Bachelor of Science in Agriculture are available through Laval Faculty of Agriculture (Ste. Anne de la Pocatière), L'Institut Agricole d'Oka (affiliated with the University of Montreal), and McGill Faculty of Agriculture (Macdonald College). The Provincial Veterinary School at St. Hyacinthe (affiliated with the University of Montreal) offers a four-year course leading to a Doctorate in veterinary medicine. There are also 17 secondary agricultural schools throughout the province, and five orphanages offer courses in agriculture. More than 1,500 students, the great majority of whom are sons of farmers, attend these intermediate or regional schools of agriculture and in the orphanages 200 pupils follow practical agricultural courses. A farm is always annexed to the school for practical training and specialists give instruction on the maple-sugar industry, farm mechanics, co-operatives, plant protection, veterinary hygiene, aviculture, marketing and silviculture. School co-operatives and clubs are organized and directed by the pupils under supervision. Household science training for the daughters of farmers and settlers is given in nine of these schools.

Ontario.—A two-year course at the Ontario Agricultural College (for the Associate Diploma in Agriculture) provides basic training for young persons interested in making agriculture their vocation. Study includes the application of science to agricultural practice and training for rural citizenship. A four-year course at the same institution for the degree of Bachelor of Science in Agriculture gives fundamental education in the science of agriculture. Sound training is provided for farming as a profession, for entrance into government extension and allied agricultural services, agricultural industry or teaching, and for those who wish to proceed to graduate studies for Master's and Doctorate degrees. Graduate courses are offered leading to the degree of Master of Science in Agriculture. Graduate students are enrolled in a department or departments of the Ontario Agricultural College conjointly with a department or departments of the University of Toronto for advanced courses of study and training in experimentation and scientific investigation. M.S.A. graduates may go into teaching, research, or postgraduate study.

Macdonald Institute offers two main courses in home economics for young women. The one-year course of practical training in the art and science of homemaking earns a diploma of merit but gives no professional standing. The four-year professional course leads to a Bachelor of Household Science degree granted by the University of Toronto. University matriculation standing (nine papers of grade 13) is necessary to enter the four-year course. At its completion, Food Administration Option graduates are eligible to work in the professional dietetic and food-service fields. These graduates and those of the Clothing and Textiles Option and the Home Management Option are finding increasing employment in many areas of work, notably education, extension, business and research fields.

The Ontario Veterinary College offers a five-year course leading to the degree of Doctor of Veterinary Medicine. In addition to its function as a teaching institution, the College is a research centre for diseases of animals and provides free consultation for veterinary surgeons in practice as well as extension services in the interests of the livestock industry.

The Kemptville Agricultural School offers: a diploma course in agriculture, comprised of two six-month terms, giving practical training in modern farming methods and community leadership, and designed primarily for young people who wish to farm but serving also as a preparation for many other occupations closely connected with agriculture; a six-month advanced course in agricultural mechanics for diploma graduates in agriculture; a six-month homemaker course leading to a diploma in homemaking and qualification for the less exacting positions in fields of home economics; a diploma course comprised of two six-month terms for girls wishing to prepare for positions in the food services, sewing centres, tourist trade and other fields of home economics. In addition, a three-month course is given for dairy apprentices, leading to the Dairy School Diploma required for certified buttermakers, cheesemakers and operators of dairy manufacturing plants. A 450-acre farm and residence life are features of the Kemptville Agricultural School.

The Western Ontario Agricultural School offers a two-year diploma course in agriculture (October to April), which gives practical training in modern farming methods and prepares young men to serve agriculture in allied occupations. The facilities comprise a group of modern buildings, including a residence and dining hall, modern classrooms, laboratories, and athletic facilities. There is a 425-acre farm with up-to-date equipment, much of which is used for student activity and for practical demonstrations. A full complement of livestock is maintained on this farm for carrying out the school program.

Manitoba.—The Faculty of Agriculture and Home Economics of the University of Manitoba offers degree courses in agriculture and home economics as well as a two-year, sub-collegiate diploma course in agriculture. Practical short courses in agriculture and homemaking are also given at the Agricultural and Homemaking School at Brandon.

Saskatchewan.—Saskatchewan offers a degree course in agriculture designed to meet the needs of those who intend to teach agriculture in secondary schools or colleges, to engage in research or administrative work, or to farm. Specialization is possible with permission of the faculty. Provision is made for combined courses in agriculture and arts or commerce. Postgraduate courses are available.

The Saskatchewan School of Agriculture offers a practical course intended to give sound training in farm practice and also to train young men in rural leadership.

All courses leading to a degree in home economics require four years. The prescribed course of studies for the first two years is the same for all pupils but in the third and fourth years four types are offered: (1) for teachers, (2) for dietitians, (3) general, and (4) additional specializations. A combined course leading to a degree in arts and science and in home economics requires at least five years.

Alberta.—The University of Alberta offers a four-year degree course in agriculture to students with senior matriculation or its equivalent. Students may elect a general program or major in a wide range of special courses in the fields of animal science, economics, entomology, dairying, plant science, and soils. Graduate work at the Master level is offered in all departments and at the Doctorate level in some.

The Alberta Schools of Agriculture and Home Economics, located at Olds, Vermilion and Fairview, offer practical courses in agriculture and homemaking. The purpose of the schools is to train young men for farming and young women for homemaking. Students must have grade 9 standing for entrance into the regular two-term course. A one-year course is offered to those who have 70 or more high school credits. Living accommodation is provided as well as auditorium and gymnasium facilities.

During the summer months the schools are used for agricultural meetings and conferences of organizations that are connected with agriculture. During the month of July, leadership courses, 4-H Club gatherings, farm camps and other events keep the facilities in constant operation.

British Columbia.—The Faculty of Agriculture at the University of British Columbia offers a four-year general degree course in agriculture and a five-year honours course. In the honours course there are 15 fields in which a student may specialize. Work is also offered by the Faculty of Agriculture in the Faculty of Graduate Studies through which a student may proceed to the degrees of Master of Science in Agriculture and Master of Science; in a limited number of fields, work is offered at the Doctorate level. The Faculty also offers a one-year or two-year diploma course in occupational agriculture, adaptable to the needs of individual students.

In co-operation with various branches of the provincial Department of Agriculture and under the auspices of the University Extension Department, the Faculty of Agriculture also offers a number of short courses which vary in length from one or two days to several weeks.

Section 3.—Agricultural Irrigation and Land Conservation

Subsection 1.—Federal Projects*

Prairie Farm Rehabilitation Act

The PFRA program was instituted by Act of Parliament passed in 1935 to provide for rehabilitation of the drought and soil-drifting areas in the Provinces of Manitoba, Saskatchewan and Alberta. It was later continued in force and its scope enlarged. The Act is designed to promote better cultural practices, to develop surface water resources for stock-watering, domestic use and irrigation of crops, particularly of forage and seed.

The administration of the Act is carried out from headquarters at Regina and its programs include water development, community pasture development, rehabilitation and re-settlement of farmers from submarginal lands on irrigated lands, and large-scale irrigation and reclamation projects. Large irrigation and reclamation projects in Western Canada are authorized by special vote of the Federal Government and are carried out and financed jointly with the provinces concerned under agreements which set out the responsibilities of each party in the development work. Federal responsibility is administered by the PFRA.

Water Conservation Projects.—As a rehabilitation measure within the drought area of the three Prairie Provinces, PFRA provides engineering and financial assistance to farmers for the construction of water conservation works. The amount of financial assistance awarded is largely dependent upon the type and size of project constructed. Authority to proceed with construction is secured through the respective provincial water rights departments.

During 23 years of operation, PFRA has provided assistance to farmers for the construction of 56,094 individual farm dugouts and small dams, many of which are suitable for irrigation. In this way, adequate water storage facilities are being developed where water shortages exist, thereby extending widely the benefits of water throughout the dry

* Prepared under the direction of Dr. J. G. Taggart, C.B.E., Deputy Minister of Agriculture, Ottawa.

areas of the prairies. By establishing a dependable water supply for domestic use, for stock-watering and for the production of feed and seed through irrigation, many prairie farmers have been rehabilitated without the necessity of moving to a new location.

The development of community water conservation projects is confined to the more well-defined watersheds. Where agricultural groups wish to utilize water on a community basis, PFRA may agree to finance the construction of the capital works provided the province or local organization involved assumes responsibility for the development and maintenance of the project after it has been completed. To Mar. 31, 1958, PFRA provided the necessary assistance to construct 421 community projects, the majority of which are located in the six watersheds originating in the three Prairie Provinces. These projects conserve surplus spring run-off water making it available for use during dry periods.

In addition, PFRA has established and continues to administer, five community irrigation projects in the drought area of southwestern Saskatchewan in accordance with the Government of Canada's rehabilitation and re-settlement policies. These projects are located at Val Marie, Eastend, Consul, Maple Creek and Swift Current and obtain their water supply from creeks originating in the Cypress Hills. The irrigable land on these projects is apportioned out in 40- to 60-acre plots to farmers in surrounding districts on the basis of need, for the production of assured livestock feed supplies.

Major Irrigation Projects.—*St. Mary Irrigation Project.*—To make available for irrigation a larger percentage of the water flowing through southern Alberta in the Waterton, Belly, St. Mary and Milk Rivers, a program to extend the original St. Mary Irrigation Project was undertaken by an agreement between the Government of Canada and the Province of Alberta. The Government of Canada agreed to construct the main supply reservoirs and the connecting canals, while the Province of Alberta undertook the responsibility for construction of the irrigation distribution system. When completed, this project will extend irrigation to approximately 510,000 acres of land in the area south of Lethbridge and east beyond Medicine Hat.

Construction of the St. Mary Dam, key structure on the whole project, was completed in 1951. During 1958 the second phase, involving the diversion of the Belly River into the St. Mary Reservoir, was completed. The third step, which is the diverting of the Waterton River into the St. Mary Reservoir by way of the Belly River diversion, is under construction. The present storage and distribution facilities extend irrigation to 296,000 acres of land in the St. Mary Project. With the addition of resources of the Waterton River, a further 214,000 acres of land will be brought under irrigation.

British Columbia Projects.—Irrigation development in British Columbia has been undertaken in connection with the Veterans' Land Act and at the request of the British Columbia Government. Intensive farming is practised in the Okanagan and South Thompson Valleys. The land developed for irrigation by PFRA is used mainly for the growing of small fruits and vegetables and for dairying.

Three irrigation projects in the South Thompson Valley area—the Johnstone Western Canada Ranching Irrigation Projects No. 1 and No. 2, and the Chase Irrigation Project with a total of 809 acres of land—have been developed for the benefit of about 40 veterans of World War II.

In the Okanagan Valley, the Penticton West Bench Project, completed in 1953 to irrigate 205 acres and accommodate 94 veterans, was extended in 1958 to provide an additional 69 small holdings for veterans. Three other irrigation projects have been completed in the Okanagan Valley for the settlement of war veterans—the Cawston Benches project east of the town of Keremeos, and the Westbank and Bankhead projects near Kelowna. Together they provide 1,782 acres of irrigated land for 170 veterans.

Major Reclamation Projects.—*North West Escarpment Reclamation Project.*—At the request of the Manitoba Government extensive investigations have been undertaken by PFRA in the Riding, Duck and Porcupine Mountain areas and Whitemud River watershed, where serious flood and erosion problems exist in an area containing over 252,000

acres of valuable agricultural land. The reclamation work, the cost of which is divided equally between the Government of Canada and the Province of Manitoba, consists of clearing and dyking stream channels, prevention of streambank erosion and aligning channels by building cutoffs and diversions.

Assiniboine River Project.—This project is being undertaken by PFRA at request of the Manitoba Government to prevent flooding on the Assiniboine River, particularly between Brandon and Virden and between Portage la Prairie and Headingly, where thousands of acres of valuable agricultural land have been inundated repeatedly. A program of dyking and weir cutoffs has been carried out to protect the farm lands from flooding during periods of high river flow. Recently, extensive surveys have been undertaken in the headwaters of the Assiniboine River to locate possible damsites for effective stream flow regulation in the lower reaches of the Assiniboine River.

South Saskatchewan River Project.—In July 1958 agreement was reached between the Government of Canada and the Province of Saskatchewan to start construction on the South Saskatchewan River Project, a large-scale multi-purpose water conservation project proposed for development in south-central Saskatchewan. The purpose of the project is to make better use of the water resources of the river through irrigation, river control, power, urban water supply, and recreation. Control will be achieved by two dams, the major one on the South Saskatchewan River at a point approximately half-way between the towns of Outlook and Elbow and the other at the divide between the valleys of the South Saskatchewan and Qu'Appelle Rivers. The agreement provides that Canada and Saskatchewan will share the cost of building the dams and all other works associated with the creation of the reservoir; 75 p.c. will be borne by the Federal Government and 25 p.c. by Saskatchewan, the province's share to be not in excess of \$25,000,000. The contribution of the Government of Canada toward the cost of the project is in accord with its long-range resource development plan to provide for expansion and stability in the country's economy.

The project, when completed, will provide water for the irrigation of approximately 500,000 acres of land located in central Saskatchewan on both sides of the South Saskatchewan River between the town of Elbow and the city of Saskatoon and in the Qu'Appelle Valley extending east of Elbow to the Manitoba border. Power installations at the damsites will have a potential output of 475,000,000 kwh.

Bow River Irrigation Project.—The Bow River Project in Alberta was purchased by the Government of Canada in 1950 from the Canada Land and Irrigation Company, a private British interest. The land associated with this project is being developed for the rehabilitation and re-settlement of farmers from the drought and soil-drifting areas of the Prairie Provinces. Its development will ensure a water supply to 100,000 acres of land at present irrigated, and will make possible the irrigation of an additional 140,000 acres of provincial and privately owned land. The repairing and enlarging of old structures and the construction of new facilities to serve the total acreage is proceeding according to plan.

Red Deer Irrigation Project.—The proposed Red Deer River development concerns the irrigation of an estimated 300,000 acres of land located in the east-central part of Alberta. The project will consist of a dam on the Red Deer River at Ardley and about 100 miles of main canal to two main reservoirs—Craig Lake and Hamilton Lake. The dam will contain power installations to produce power for pumping and also for sale commercially. Capacity is estimated at 20,000,000 kwh.

Saskatchewan River Reclamation Project.—Surveys and investigations were made by PFRA to determine the possibility of successfully reclaiming land for agriculture in the Pasquia area of the Saskatchewan River delta region near the town of The Pas in Manitoba. As a result an agreement was reached early in 1953 between the Government of Canada and the Province of Manitoba for the construction of the necessary reclamation works to protect the area from flooding and to settle about 100,000 acres of arable land; the Government of Canada will assume the cost of building the main protective works, and Manitoba the costs of settlement, maintenance of works, and internal drainage. One-

half of the reclaimed land is to be reserved for the re-settlement of farmers from drought areas and the remainder is to be sold. Part of the proceeds from the sale of the lands will go to the Federal Government as a partial reimbursement of the costs of building the main protective works. Construction began early in 1953 and the main works are now in operation.

Lilloet Valley Reclamation Project.—This project was undertaken upon agreement between the Government of Canada, the Government of British Columbia and the Pemberton Valley Reclamation District and is located in the Lilloet River Valley above and below the town of Pemberton. Its objective is to protect lands now under cultivation from flooding and to reclaim additional lands by dyking and drainage. The land so far reclaimed, amounting to 14,000 acres, allowed farmers in the district to increase their holdings and permitted the settlement of hundreds of additional inhabitants.

Land Utilization—In addition to improved cultural methods and water conservation activities, rehabilitation of drought areas involves the conversion to grass production of large tracts of land that have proven unsuitable for cereal crop production. By agreement with the Provinces of Saskatchewan and Manitoba, these submarginal lands are leased to the Federal Government which agrees to finance the construction, maintenance and improvement of pasture facilities in these areas. The farmers located within the pasture areas are assisted in re-establishing themselves in new locations.

Since the inception of the land utilization program in 1937, a total of 1,796,275 acres of land have been developed into 62 separate community pastures. These pastures make it possible for the farmers in the surrounding area to stabilize their farm income through increased livestock production. During the year ended Mar. 31, 1958, grazing was provided for 119,398 head of livestock owned by 5,763 patrons.

An extensive improvement program in effect on all pastures is begun as soon as new areas are enclosed, a policy that has more than doubled the carrying capacity of this pasture land. The improvement policies most extensively practised in all pastures are the re-grassing of depleted areas, the development of sufficient stock-watering sites, and the following of proven pasture management policies such as controlled grazing and maintaining a 50-p.c. grass carryover where feasible. Since 1938, approximately 200,000 acres of land in community pastures have been re-grassed, and more than 1,200 stock-watering dams, dugouts, springs and wells have been constructed.

Maritime Marshland Rehabilitation Act Administration (MMRA)

Under the terms of this Act, Canada has undertaken to protect and rehabilitate the tidal marshlands in Nova Scotia, New Brunswick and Prince Edward Island in co-operation with the respective provincial governments. The principal function of MMRA is to carry out these responsibilities by constructing dykes, aboiteaux (tide gates) and breakwaters to prevent tidal flooding of valuable agricultural lands. Headquarters of the MMRA organization is at Amherst, N.S.

The construction of large structures near the mouths of some rivers to hold back the tides has made it possible to eliminate the need for many miles of dykes and of numerous small aboiteaux. Such structures not only reclaim larger areas of land but very substantially reduce maintenance costs and provide roadways where bridges would otherwise have been required.

By Mar. 31, 1958, the provinces had asked to have over 150 marsh areas with a total area of 93,983 acres included in this reclamation program: Nova Scotia, 52,616 acres; New Brunswick, 41,092 acres; and Prince Edward Island, 275 acres.

As of March 1958, approximately 75,540 acres of marsh were protected from tidal flooding by structures which were either complete or in process of being built or rebuilt. The individual marsh areas form parts of approximately 3,300 farms having a total area of about 500,000 acres.

On the Annapolis River at the town of Annapolis Royal, N.S., and on the Tantramar River near the town of Sackville, N.B., work is being undertaken to dam these tidal rivers to protect large areas of marshlands. Both dams are designed to carry highway traffic.

Subsection 2.—Provincial Projects

Saskatchewan.*—The Conservation and Development Branch of the provincial Department of Agriculture was established in 1949. Its functions include the administration of water rights; irrigation development, engineering and structures; flood control and drainage; restoration of abandoned, under-utilized and misused lands; and construction of provincial community pastures. Conservation and development activity in the field of agricultural rehabilitation and reclamation is based on co-operation with the Federal Government's PFRA program with which a close working arrangement is maintained. Following is a summary of the activities of the Saskatchewan Department of Agriculture to Mar. 31, 1958.

Water Rights.—Under the Water Rights Act, 5,840 water storage projects for domestic irrigation, municipal, industrial and other like purposes covering 463,450 acre-feet of water have been licensed, and there are 133 gauging stations being maintained by the Federal Water Resources Branch under co-operative agreement to continue hydrometric surveys and a surface water inventory. The Chief Engineer of the Water Rights Office represents the Province of Saskatchewan on the engineering committee of the International Joint Commission and on the Prairie Provinces Water Board.

Irrigation Development.—By the end of Mar. 31, 1958, 94,964 acres of topographic surveys and 169 miles of profile surveys were completed on irrigation projects; 303 miles of ditch were built and 186 miles maintained; 1,454 structures were installed and 74 maintained; and 7,490 acres were levelled.

Flood Control Development.—Topographic surveys of 146,436 acres and 6,389 miles of profile surveys were completed on drainage projects; 748 miles of ditch and 225 miles of road were built and 136 miles of ditch maintained; 37 miles of dyke were built and 783 structures installed in drainage systems.

Development of Under-utilized and Misused Lands.—A total of 61,015 acres of tame perennial forage crops were seeded, mostly for fodder production; 991 miles of fence and 72 watering sites were built or rebuilt in departmental, municipal or co-operative pastures; 750,000 trees were planted; and 97 conservation and development areas totalling 12,000,000 acres were established.

Community Pastures.—Through the Lands Branch of the provincial Department of Agriculture, the province has transferred title to 1,194,574 acres and leased without charge another 341,876 acres of land to PFRA for community pastures. Outside the PFRA program, the province has another 797,454 acres in 110 community pastures operated by co-operative associations, by municipalities or by the provincial Department of Agriculture; in 1957, 18 pastures operated by the province provided grazing for 17,395 head of cattle owned by 959 local farmers.

Development of Land for Cultivation.—Crown lands, either under cultivation or suitable for cultivation, are leased for a 33-year period. The province may either reimburse farmers in cash for the cost of clearing and breaking virgin land or the farmers may retain crop shares equivalent in value to costs sustained. To Mar. 31, 1958, the investment of the province for land clearing and breaking amounted to \$6,528,652, and included work done in six settlement projects involving initial clearing and breaking on about 200 farm units before the land was leased.

Alberta.—The Alberta Water Resources Act gives the Minister of the Department of Agriculture wide powers to investigate the water resources of the province and extensive surveys have been carried out to determine the distribution and extent of the available water supplied in the province and the most beneficial use for irrigation, water power and other purposes. The Water Resources Branch of the provincial Department of Agriculture

* Prepared by W. H. Horner, Deputy Minister, Saskatchewan Department of Agriculture.

administers the licensing of water power projects and the construction work in several irrigation projects. Irrigation projects are also licensed and water allocated for domestic and irrigation purposes. Other work includes administration of drainage districts, co-operation on the Peace River Dug-out Project and on river protection projects where flooding occurs. In more recent years much of this work has been carried out by the Federal Government in co-operation with the Government of Alberta.

Stream measurement is being done by the Hydrometric Service of the federal Department of Northern Affairs and National Resources, and irrigation surveys are carried out largely by the water development organization under the PFRA (*see* p. 408).

In 1958 the Province of Alberta completed the construction of the distribution system for the Western Block of the Bow River Development; the irrigable area is approximately 45,000 acres.

The figures given in Table 5 of land actually irrigated in Alberta in 1957 are only approximate because, while there are increases resulting from the creation of new pump irrigated areas, there are also decreases caused by soil re-classification and less water use, depending on natural precipitation. Seepage and alkali problems also have an effect on acreage quoted as irrigable. Figures for small private irrigation projects have been omitted because of their uncertain water supply.

Gross cash returns from the irrigable area are estimated at \$30,000,000 though this figure does not take into account the value of stockwater supplied through irrigation works. Nor does it include many other credit items that are difficult to evaluate such as the recreational use of water which, to these one-time semi-arid areas, is particularly important, and the value of fish taken from irrigation reservoirs which is known to be quite significant. Several communities receive their entire domestic water supply via irrigation canals.

5.—Major Irrigation Districts in Alberta, 1957

District	Classified Irrigable Area	Area Actually Irrigated in 1957
	acres	acres
St. Mary and Milk Rivers Development.....	259,861	78,665 ¹ 139,000 ²

¹ Old lands.

² New lands.

³ Estimate.

British Columbia.—About 20 p.c. of the arable land in British Columbia is under cultivation and nearly all the grazing area is being utilized. The 1,300,000 acres developed give a ratio of approximately one acre per person. Within this arable area there exists an estimated 211,000 acres of irrigated land and the total area of irrigable land in British Columbia is estimated at 400,000 acres.

About 75 p.c. of the irrigated area is made up of individual projects and the remainder is served by the larger irrigation projects listed in Table 6.

6.—Major Irrigation Projects in British Columbia, April 1959

Section 4.—Statistics of Agriculture*

The collection, compilation and publication of statistics relating to agriculture is a responsibility of the Dominion Bureau of Statistics. Valuable information obtained through the Censuses of Canada and partial-coverage surveys may be obtained in reports issued by the Bureau.†

The Bureau also collects and publishes primary and secondary statistics of agriculture on an annual and monthly basis. The primary statistics relate mainly to the reporting of crop conditions, crop and livestock estimates, values of farm lands, wages of farm labour and prices received by farmers for their products. The secondary statistics relate to the marketing of grain and livestock, dairying, milling and sugar industries and cold storage holdings.

In the collection of annual and monthly statistics, the federal Department of Agriculture and the provincial Departments of Agriculture, as well as such agencies as the Board of Grain Commissioners and the Canadian Wheat Board, co-operate with the Bureau. Also, many thousands of farmers throughout Canada send in reports voluntarily.

The figures (except for 1956 Census data) contained in this Section do not include estimates for Newfoundland. Agriculture plays a relatively minor part in Newfoundland's economy, commercial production of most agricultural products being quite small.

A review of agricultural production and trade covering the first half of 1958 is given in Subsection 1; details for the year 1957 are presented in Subsections 2 to 9.

Subsection 1.—Review of Agricultural Production and Trade, 1958

There was a steady improvement in the Canadian economy during 1958 which was shared by the agricultural industry. Following two almost unprecedented boom years, there had been a falling-off in trade activity paralleling the recession in the United States and leading to considerable unemployment generally. However, despite this situation, 1958 found farmers still in need of dairy farm help; the number of workers with agricultural jobs dropped by some 34,000 to average 688,000 per month in the first seven months of the year. This figure represented an increase of females and a decrease of males.

Farm cash income at \$1,300,000,000 for the first six months of 1958 was 9 p.c. higher than for the same period of 1957, an increase shared by all provinces. Farm expenditures for machinery, commodities and services were higher but that increase was counterbalanced to some extent by a slight gain in wholesale prices for farm products.

Field Crops.—Canada's 1958 *wheat* crop amounted to 368,700,000 bu., only slightly less than the previous year's production but sharply below the 1956 crop of 573,000,000 bu. Total supplies of wheat in the crop year 1958-59 amounted to 980,200,000 bu. The *oat* crop at 401,000,000 bu. was 20,400,000 bu. larger than in the preceding year while production of *barley* at 244,800,000 bu. was also above the 1957 level of 216,000,000 bu. Total supplies of oats and barley amounted to 555,900,000 bu. and 362,900,000 bu., respectively.

Feed grain grown in 1958 dropped slightly to 21,700,000 tons but was 20 p.c. higher than the previous ten-year average. This coincided with a decline in hay production as a result of summer drought and an increase in livestock numbers, two factors that promised to make inroads into the feed grains supply. In view of the smaller exports of feed grains to the United States where there was a bumper crop, it was considered fortunate that the livestock increase was in grain-consuming rather than roughage-consuming animals. Estimated net supply per animal was about 1.01 tons, down 9 p.c. from the 1957-58 season.

The combined fall and spring *rye* crop was estimated at 8,000,000 bu. giving total supplies for the crop year 1958-59 of 18,100,000 bu., slightly below those of recent years. The United States limited imports of Canadian rye to 3,255,000 bu. a year, starting July 1, and, with world supplies as they are, it is unlikely that new major markets will develop in the near future.

* Revised in the Agriculture Division, Dominion Bureau of Statistics.

† Copies obtainable from the Dominion Statistician or the Queen's Printer, Ottawa.

The production of *sugar beets* in 1958 was estimated at a record 1,345,000 tons. The Alberta crop accounted for 45 p.c. of the total and in Ontario production increased greatly. The national average farm price during 1957-58 was \$13.24 a ton.

The *dried pea* crop of 1,100,000 bu. in 1958 reflected the combined effect of reductions in both seeded acreage and yield. Imports amounted to 40,300 bu. and exports to 524,000 bu. in the 1957-58 crop year. Production of *dried beans* was 1,400,000 bu., Ontario being the chief grower. Exports in the 1957-58 crop year were 100,000 bu., down 24 p.c. from 1957, and imports were slightly lower at 139,100 bu.

The *soybean* crop of 6,600,000 bu. was about the same as in 1957, although Manitoba increased its planted area from 4,000 to 7,000 acres. Ontario, the other producer, had an acreage of 256,000. In the 1957-58 crop year, 146,000,000 lb. of oil and 653,000,000 lb. of oil meal were extracted. The average farm price was \$1.95 per bu. and soybean growers, for the first time, came under the support of the Agricultural Stabilization Board. Imports amounted to 10,800,000 bu. and exports, mostly to the United Kingdom, were 2,100,000 bu.

The *flaxseed* crop at 23,200,000 bu. was about 21 p.c. above the 1957 production. Although acreage sown was down by 24 p.c. the average yield increased from 5.5 bu. per acre to 8.7 bu. Total supplies in the 1958-59 crop year were estimated at 28,700,000 bu. Crushings in 1957-58 of 202,700,000 lb. of flaxseed yielded 72,200,000 lb. of linseed oil and 124,800,000 lb. of oil meal. Exports at 13,700,000 bu. were lower than in the previous year partly because of higher costs in relation to other vegetable oilseeds.

Despite limited precipitation in the Prairie Provinces and poor early season prospects, the acreage of wheat, barley and flax inspected for *seed registration and certification* was at record levels. Oats inspections were down 33 p.c. Seed of certified cereals, flax, corn, field peas and beans, and soybeans appeared sufficient to meet Canadian requirements and a surplus was available for export. Forage seeds production, with the principal exception of alsike clover and creeping red fescue, was lower than in 1957 and in general the market for forage seeds was stronger and prices to growers higher than in the previous year.

Livestock.—Farm cash income from the sale of livestock, livestock products and poultry in the January-to-September period of 1958 was 13 p.c. higher than in the comparable period of 1957; in fact, it was higher than for any comparable period since 1951. Livestock continued the upward trend that began five years before, but higher meat prices discouraged an increase in domestic consumption, and Canada continued to be a substantial net exporter of livestock and meat. The chief reason for this market buoyancy was the shortage of both feeder and slaughter cattle in the United States and the abundance of feed there.

Farm output of livestock for slaughter in Canada during 1958 totalled 12,229,000 head, an increase of 9 p.c. over 1957. Livestock exports totalled 720,000 head, compared to 407,000 head in 1957, or an increase of 77 p.c. Exports of red meats and offal (fancy meats) amounted to 148,295,000 lb. in 1958 compared with 106,234,000 lb. the previous year, an increase of 40 p.c.

Cattle numbers declined nearly 2 p.c. from 10,293,000 head at Dec. 1, 1957, to 10,112,000 head, the greatest decrease being in steers. Prices of all classes of cattle rose sharply early in the year. Good steers for slaughter ranged from a low of \$20.14 per cwt. (Toronto) in January to finish the year at a high average of \$26.17 in December. The range during 1957 had been from \$19.94 in April to \$17.36 in October. Stocker calves averaged \$20.17 (Toronto) in January and \$29.55 by December.

Hog production increased and commercial marketings reached 6,467,000 head by the end of December 1958, 20 p.c. more than in 1957 and 22 p.c. more than the ten-year average 1948-57. Prices averaged lower than a year earlier and in late October the Agricultural Stabilization Board began to purchase pork in order to prevent prices from dropping below support levels.

Supplies of mutton and lamb were heavier during 1958 despite reduced domestic output. Disappearance increased by nearly 3 p.c.

Dairying.—*Milk* production for 1958 was estimated at a record 18,000,000,000 lb., the increase over 1957 being accounted for by all provinces except Nova Scotia. The additional milk was principally used to make creamery butter, production of which also attained a new record at 336,000,000 lb. Domestic disappearance, however, declined and stocks at the end of the year were about 24,000,000 lb. larger than they were a year earlier.

In contrast, *cheddar cheese* production and disappearance was lower than a year ago. The export of about 15,500,000 lb. left end-of-year stocks smaller than in 1957. Production and disappearance of *evaporated milk* were almost in balance in 1958 at about 310,000,000 lb. and 307,000,000 lb. respectively, prices remaining unchanged for more than a year. *Dried skimmed milk* output at 187,000,000 lb. was by far the largest annual production in Canada's history and was estimated to exceed domestic consumption by about 76,000,000 lb. Of this, 60 p.c. was exported and the remainder added to stocks. *Fluid milk* sales were slightly larger in 1958 as a result of population increase but per capita sales declined.

Fruits and Vegetables.—Most *fruit* crops were larger in 1958 than in 1957; apples, apricots and raspberries were the exceptions. Prices in Ontario for fruits for processing were at 1957 levels or lower, except for strawberries for which the minimum was sharply higher. The apple crop, estimated at 15,400,000 bu., was 3 p.c. below 1957 but 10 p.c. above the 1952-56 average.

Commercial *vegetable* growers planted 195,000 acres in 1958, 5 p.c. less than in the previous year. In Eastern and Central Canada the season was later than usual but favourable weather conditions prevailed during the late summer in the important vegetable-producing sections of southwestern Ontario. As a result of relatively larger packs in 1957 and a consequent carryover, the acreages contracted for corn, peas and tomatoes for canning were lower in 1958.

Other Principal Farm Products.—The 1958 *tobacco* crop was estimated at 182,000,000 lb., green weight, compared with 165,000,000 lb. for 1957. Ontario flue-cured tobacco was calculated at 160,000,000 lb. as against 148,000,000 lb. in 1957. About 136,000 acres were planted to tobacco, 119,000 acres in southern Ontario which was 1,000 acres less than in the previous year. The Ontario Flue-cured Tobacco Growers' Marketing Board reduced the basic acreage allotment per farm by 15 p.c. after allowing a basic exemption per farm of 15 p.c. and allotting acreage to more than one hundred new farms. It is interesting to note that research has made possible the raising of tobacco in the Ottawa Valley of Ontario and in the Annapolis Valley of Nova Scotia; so far production in these areas is on a small scale.

Cigarette consumption in Canada increased from 1,678 per capita in 1956 to 1,817 in 1957 and further increases appear to have taken place judging from the release of 16,000,000,000 cigarettes for consumption in the first half of 1958.

The *potato* crop, estimated at about 38,000,000 cwt. for 1958, recorded a decline of nearly 9 p.c. from 1957.

The volume of *eggs* marketed through registered grading stations showed little change in 1958 as compared with 1957. Heavier marketings in the western provinces offset a decrease in Eastern Canada. The price pattern reflected this situation; producers in Eastern Canada received somewhat higher prices than in 1957 and prices in Western Canada were close to the levels of the previous year. Exports increased, particularly to Venezuela.

Wool prices declined severely in 1958 but, owing to the deficiency payment program under the Agricultural Stabilization Act and a small increase in production, producers received a higher return than in any year since 1952.

The 1958 *maple* crop, expressed as syrup, was 2,400,000 gal., 21 p.c. below that of 1957 but close to the average production for the years 1951-55. Almost 90 p.c. of this crop was produced in the Province of Quebec. Higher prices on farmers' markets reflected the reduced production. Exports of sugar were 6,200,000 lb. in 1958, about 15 p.c. higher than in 1957.

The *honey* crop in 1958 was estimated at 27,500,000; there were fewer beekeepers than in 1957 although more colonies were operated. Stocks at June 30, 1958, amounted to 10,000,000 lb., reflecting the large 32,000,000-lb. crop harvested in 1957.

Subsection 2.—Cash Income from the Sale of Farm Products, 1957

Income from the sale of farm products in 1957 was estimated at \$2,600,000,000, 2.7 p.c. less than the preceding year's estimated total of \$2,700,000,000. The decline may be attributed in the main to lower cash returns from the sale of cereal grains which were offset only in part by higher returns from the sale of livestock and livestock products. On a regional basis, farm cash income in the two central provinces, Ontario and Quebec, and the two most westerly provinces, Alberta and British Columbia, was about the same as in 1956; in all other provinces it was lower.

Field Crops.—Returns from the sale of field crops for 1957 were estimated at \$369,000,000, about 11 p.c. less than the 1956 estimate. In addition to Wheat Board participation payments (included in this estimate since 1944) the 1957 estimate included net cash advances amounting to almost \$25,000,000 made under the Prairie Grain Advance Payments Act.

The effects of the decline in cash returns from the sale of field crops was borne almost entirely by Prairie Province farmers and can be attributed to smaller marketings and lower prices for wheat, oats and barley. With the exception of tobacco, returns from all other field crops were only slightly lower than a year earlier and contributed little to the over-all drop of \$117,000,000 from field crops.

Livestock and Livestock Products.—Cash income from the sale of livestock and livestock products, including poultry, dairy products, eggs and wool, was estimated at \$1,600,000,000 for 1957, up \$51,000,000 from the 1956 estimate. This increase was attributed mainly to larger cattle marketings in Prince Edward Island, Quebec and particularly in the three Prairie Provinces, where two-thirds of the increase originated from the sale of cattle and calves. Income from dairy products increased by \$27,000,000 and from the sale of poultry by \$3,700,000.

Net Income of Farm Operators from Farming Operations, 1957.—After moving slowly upward for two years, farm net income dropped back in 1957 to the 1954 level of slightly more than \$1,000,000,000. This decline of 28 p.c. from the 1956 level was the result of lower net income to farmers in all provinces except British Columbia and Ontario where it increased by 4 p.c. Farm net income was about 25 p.c., 4 p.c. and 47 p.c. lower in 1957 than in 1956 for the Maritime Provinces, Quebec and the Prairie Provinces respectively. The increase in Ontario and British Columbia was almost sufficient to offset the

reduction in Quebec and the Maritime Provinces but the major portion of the decline, \$395,000,000 of the total of \$403,000,000, resulted from a smaller grain crop and smaller grain marketings in the Prairie Provinces compared with a year earlier.

In all provinces farm expenses and depreciation charges were lower in 1957 than in 1956, which tended to offset somewhat the effects of lower income.

Subsection 3.—Volume of Agricultural Production

A preliminary estimate places the index of physical volume of agricultural production for 1957 at 130.5 (1935-39 = 100), about 23 p.c. below the all-time high estimate of 169.2 for 1956. As stated previously, the decline in total agricultural production in 1957 from the high level of 1956 was largely attributable to the substantial reduction in output of grains in Western Canada. Somewhat lesser contributions to the decline in total production were smaller outputs of livestock and tobacco. Increased production was recorded for almost all the remaining items considered in the index.

Reduced total agricultural production took place in all provinces except Prince Edward Island and British Columbia. On a percentage basis, the reductions ranged from less than 3 p.c. in Nova Scotia to about 44 p.c. in Saskatchewan. Percentage increases were 11.4 p.c. in Prince Edward Island and just over 13 p.c. in British Columbia.

11.—Index Numbers of Physical Volume of Agricultural Production, by Province, 1948-57

(1935-39=100. Exclusive of Newfoundland)

NOTE.—For a description of this index, methods and coverage, see *DBS Quarterly Bulletin of Agricultural Statistics* for April-June, 1952. Figures for 1935-44 are given in the 1950 Year Book, p. 420, and for 1945-47 in the 1956 edition, p. 423.

Subsection 4.—Field Crops

Following the excellent growing season in 1956, prairie farmers experienced drought conditions in 1957. Saskatchewan, in particular, and Alberta received only scattered rains through most of the growing period and as a result crop production was well below the average of recent years. The Maritimes also suffered from dry conditions early in the season, although August and September rains improved the situation. In contrast, growing conditions were generally excellent during most of the summer in Quebec and Ontario. Conditions for crop production were excellent also in British Columbia. However, in the Peace River area of British Columbia and Alberta, heavy rains held up the harvest and a large amount of grain which remained in the fields over the winter could not be recovered. Hail losses in 1957 were extensive as many moderate to severe storms swept across the prairies. Of the 21 crops for which estimates were made in 1957, production was greater than the previous year for fall rye, corn for grain, soybeans, potatoes, rapeseed, sunflower seed, fodder corn and sugar beets. New production records were established for soybeans and rapeseed.

Marketings of the five major grains (wheat, oats, barley, rye and flaxseed) totalled 585,445,000 bu. in 1956-57 and 575,570,000 bu. in the 1957-58 crop year. These amounts were well below the record 1952-53 year when marketings reached 844,855,000 bu. but compared favourably with the ten-year (1946-47—1955-56) average of 571,076,000 bu. Combined exports of the same grains (including wheat flour, rye flour, rolled oats and oatmeal, malt, and pot and pearl barley) amounted to 389,045,000 bu. in 1956-57 and 441,170,000 bu. in 1957-58. Exports during the period were well above the ten-year average of 370,970,000 bu. Stocks of grain continued to mount in 1956-57 but, because of the small crop in 1957 and relatively high exports, disappearance during 1957-58 amounted to more than production and, as a result, stocks of grain were drawn down.

The gross value of production of principal field crops on Canadian farms in 1956, based on average prices received by farmers throughout the 1956-57 crop year, was estimated at \$1,870,444,000. On the basis of partial price returns and reflecting reduced crop production, the 1957 value decreased sharply to \$1,342,178,000. These amounts were well below the record-breaking year of 1952 when the total reached \$2,306,397,000 and the 1951 total of \$2,120,301,000. Estimates of the value of the 1957 crops, based on average prices received by farmers during the complete crop year will be published in one of the regularly scheduled DBS crop reports and in the *Quarterly Bulletin of Agricultural Statistics*.

12.—Acreages, Yields and Prices of Principal Field Crops 1953-57, with Five-Year Average 1945-49

(Exclusive of Newfoundland)

NOTE.—Most of the figures in this table have been revised since the publication of the 1957-58 Year Book.

Stocks of Grain in Canada.—Table 15 shows the stocks of Canadian grain on hand in Canada and in the United States on July 31 for the years 1952-57, with averages for the five-year periods 1940-44 and 1945-49. Stocks in Canada are separated into those in commercial positions and those on farms. Stocks on farms and in country elevators in the Prairie Provinces are given separately.

SUPPLY AND DISPOSITION OF PRINCIPAL GRAINS,*

CROP YEAR 1957-58

THOUSAND BUSHELS

	CARRYOVER 1956-57	+	1957-58 PRODUCTION	-	EXPORTS	-	DOMESTIC USE	=	CARRYOVER 1957-58
WHEAT	226,544	+	370,508	-	315,593	-	169,697	=	614,764

¹ Cows and heifers, two years old or over, kept for milk purposes.

The federal Department of Agriculture inspects all livestock in plants designated as inspected establishments under the Meat and Canned Foods Act. A statistical record is kept of these inspections and details are given in Table 18. Local wholesale butchering and slaughtering carried out by retail butchers and by farmers for their own use are not included. Actually the slaughtering and meat packing industry is concentrated in a comparatively small number of large establishments to facilitate greater efficiency and utilization of products; thus the figures of Table 18 are fairly inclusive. The slaughtering and meat packing industry is dealt with in its proper relation to all other manufacturing enterprises in Chapter XIV of this volume. On a gross value basis it normally ranks among the three largest manufacturing industries in Canada but it owes its importance to the value of raw products obtained from the farmer and the rancher rather than to the value added by the manufacturing process.

Subsection 6.—Dairying

Milk Production.—Milk production in 1958 amounted to 18,057,136,000 lb. an increase of 751,108,000 lb. over the previous year. The proportion of the total milk production used for factory-made dairy products increased to 58.4 p.c. from 57.2 p.c. in 1957. The proportion sold in fluid form was 30.4 p.c. in 1958 compared with 31.1 p.c. in 1957. Milk used for all purposes on farms (home consumed, manufactured and fed) was 11.2 p.c. in 1958 compared with 11.7 p.c. in 1957.

Butter, Cheese and Other Dairy Products.—Butter production in 1958 amounted to 349,995,000 lb., 31,848,000 lb. more than in 1957. Of the total, 336,085,000 lb. was creamery butter, 11,776,000 lb. dairy or farm-made butter and 2,134,000 lb. whey butter.

Factory cheese production in 1958 was estimated at 100,895,000 lb., a decrease of 7.5 p.c. from the 1957 estimate and 51.4 p.c. below the peak production of 207,431,000 lb. in 1942. Exports of cheese, mostly cheddar, amounted to 15,701,000 lb. in 1958 and 8,456,000 lb. in 1957 as compared with 135,409,000 lb. in 1945.

The over-all production of concentrated milk products increased to its highest level in 1958 and the production of ice cream was about 1,398,000 gal. higher than in 1957.

Domestic Disappearance of Dairy Products.—The estimated consumption of fluid milk and cream, on a milk basis, amounted to 5,100,215,000 pt. in 1958, 86,282,000 pt. higher than the 1957 consumption. The daily average consumption per capita was 0.84 pt. The estimated consumption of milk and cream is given by province in Table 26 and the domestic disappearance of all dairy products in Table 27.

26.—Estimated Consumption of Milk and Cream (expressed as Milk), by Province, 1955-58

NOTE.—The figures in this table have been revised since the publication of the 1957-58 Year Book.

¹ Includes Newfoundland for all manufactured dairy products.² Includes, in addition to the items listed, malted milk, cream powder, partly skimmed evaporated milk, sub-standard whole milk powder and sterilized cream.³ Includes milk by-products items not listed, i.e., condensed buttermilk, powdered buttermilk, sugar of milk, casein and powdered whey. Since the quantities used for human consumption and livestock feeding cannot be separated, per capita figures include both.⁴ Includes ice cream in terms of milk.

Subsection 7.—Fruits and Vegetables

Fruits.—Commercial fruit growing in Canada is confined almost exclusively to rather limited areas in the Provinces of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia. Nova Scotia production is centred mainly in the Annapolis Valley and New Brunswick production in the St. John River Valley and Westmorland County. The fruit growing districts of Quebec are the Montreal area, the North Shore area, the Eastern Townships and the Quebec City district. Ontario fruit is grown in all the counties adjacent to the St. Lawrence River and the Great Lakes as far west as Georgian Bay, the Niagara district being the most productive. In British Columbia the four well defined fruit areas are the Okanagan Valley, the Fraser Valley, the Kootenay and Arrow Lakes district and Vancouver Island. The climate elsewhere in Canada is not generally suitable for commercial tree-fruit culture. In most producing areas, particularly in the Annapolis Valley of Nova Scotia, the Niagara Peninsula of Ontario and the Okanagan Valley of British Columbia, fruit growing is either the principal or one of the most important forms of agriculture and is of paramount importance to the economy of those areas. Apples and small fruits are produced commercially in the provinces named but tender tree fruits and commercial vineyards are largely limited to Ontario and British Columbia.

Strawberries are grown commercially in all provinces for which tree-fruit statistics are prepared as well as in Prince Edward Island. However, this crop is produced over a somewhat wider area than are tree fruits. In Nova Scotia, for example, considerable

quantities of strawberries are grown in Colchester County and farther north as well as in the apple producing areas of the Annapolis Valley. In British Columbia most of the strawberries are grown in the Fraser Valley rather than in the predominantly tree-fruit producing area of the Okanagan Valley.

Raspberries are grown commercially in Nova Scotia, New Brunswick and Quebec but the bulk of the crop is produced in Ontario and British Columbia. The Fraser Valley of British Columbia is the most important producing area.

Wild blueberries are harvested on a commercial scale in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick and Quebec. This crop is indigenous to certain lands in these areas. Individuals who harvest the wild berries may undertake to burn the land from time to time for weed control and to effect pruning. Dusting is often carried out to control insects, and bees are sometimes introduced to secure better pollination. A large percentage of the crop is frozen and exported. Some blueberries are picked for sale in other provinces but no statistics of this trade are available. There is also some production of cultivated blueberries, particularly in British Columbia.

A marketing system has been developed for distributing fresh fruit from the specialized production areas to all parts of the country and a large proportion of the deciduous fruit consumed in Canada is grown domestically. Considerable quantities of apples, strawberries and blueberries are exported annually, with the United States as the most important export market for Canadian fruit.

Canning and processing industries have developed in the fruit growing districts and, although the importance of the processing market varies with different fruits, it provides a valuable outlet for substantial proportions of most Canadian-grown fruit crops. Some canned fruits are exported.

¹ Farm value (to pickers in the case of blueberries) for unpacked fruit.

Vegetables.—Estimates of acreage and production of commercial vegetables in Canada are prepared for all provinces except Newfoundland, Prince Edward Island and Saskatchewan. The Province of Ontario is the largest producer followed by Quebec and British Columbia. A wide variety of crops is grown in these three provinces while a somewhat smaller range of crops is produced in the Maritimes and in the Prairie Provinces.

Canning, freezing and processing of vegetables are carried on in the important producing areas. The estimates in the following tables cover output of commercial growers only and do not include any acreages or production of vegetables grown for home use on farms or elsewhere. Except as otherwise noted in footnotes, all statistics pertain to crops grown for the fresh market and for processing.

Subsection 8.—Other Principal Farm Products

Tobacco.—The chief tobacco-growing area of Canada is located in southern Ontario in the counties adjacent to Lake Erie. Most of the cigarette tobacco comes from this district. In Ontario in 1957, 120,652 acres of flue-cured or Bright Virginia type tobacco and 6,000 acres of Burley tobacco were harvested. These are the most important types grown in Canada though dark air-cured and fire-cured tobacco as well as cigar tobacco are grown on a limited scale. The only other important production comes from Quebec. In 1957, 5,661 acres of flue-cured tobacco, 3,300 acres of cigar tobacco and 825 acres of pipe tobacco were harvested in that province.

A study of Department of National Revenue reports on tax-paid withdrawals of tobacco products reveals changes in the smoking habits of Canadians during the past three decades. In 1922, the first year for which comparable figures are available, Canadian per capita consumption of cigarettes was 229, cigars 20, cut tobacco 1.3 lb., plug tobacco 1.1 lb. and snuff about 1.3 oz. By 1957 the annual per capita consumption of cigarettes had increased to 1,817, cigars had dropped to 17.6, cut tobacco went up to 1.6 lb. in 1954 but declined to 1.2 in 1957, and plug tobacco had declined considerably.

¹ Includes other types not specified.

Sugar Beets and Beetroot Sugar.—Sugar beets are grown commercially in Quebec, Ontario, Manitoba and Alberta and beet sugar factories are located in these provinces. In Quebec, commercial production centres in the St. Hilaire area of the Eastern Townships, where operations started in 1944. The sugar beet industry of Ontario is largely confined to the southwestern section of the province and factories are located at Wallaceburg and Chatham.

Processing of sugar beets in Manitoba began in 1940. In Alberta, where the industry has shown steady growth, sugar beets are produced under irrigation with yields averaging above those received in the other provinces.

Eggs.—The net production of eggs in 1957 was 446,476,000 doz. which was 42,165,000 doz. more than in the previous year. Total supply of eggs also showed a considerable increase, from 414,669,000 doz. in 1956 to 455,703,000 doz. in 1957. Domestic disappearance, which includes hatchery eggs, amounted to 432,905,000 doz. as compared with 403,110,000 doz. in the same comparison. Per capita consumption for the year 1957 was 25.4 doz.

⁴ Average value at farms for all purposes.

Wool.—Canada's wool requirements are met largely by imports which amounted to 47,331,000 lb. (greasy basis) in 1957 and 57,239,000 lb. in 1956. Exports amounted to 3,917,000 lb. in 1957 and 3,594,000 lb. in 1956. The apparent domestic consumption of wool shown in Table 36 is determined on the basis of production, exports and imports but does not take into consideration changes in stocks for which the data are not available. Differences in wool utilization between years are therefore probably less marked than indicated by these figures.

Honey.—Honey is produced commercially in all provinces of Canada except Newfoundland, Ontario being the largest producer. There is a considerable movement of honey from the Prairie Provinces to other parts of Canada. In recent years exports have been small, imports being higher than exports.

Honey statistics have been compiled on an all-Canada basis since 1924 and show that the largest recorded crop was in 1948 when 45,145,000 lb. were produced. Production in 1957 was 32,051,000 lb.

In order to facilitate storage, shipment and uniformity of quality, considerable quantities of Canadian honey are pasteurized. Beekeepers' marketing co-operatives are active in several provinces. Bees are kept in some of the fruit growing and greenhouse districts of the country chiefly for purposes of pollination.

Maple Sugar and Syrup.—Maple syrup is produced in the Provinces of Nova Scotia, New Brunswick, Quebec and Ontario. The bulk of the crop comes from the Eastern Townships of Quebec, a district famous both in Canada and the United States as the centre of the maple products industry. Virtually all of the maple products exported are sent to the United States with the larger proportion moving as sugar, although substantial quantities of syrup are also shipped.

Much of the syrup sold in Canada is marketed in one-gallon cans direct to the consumer from the producer but a considerable amount of both sugar and syrup is sold each year to processing firms.

Nursery Stock.—Statistics concerning the nursery industry in Canada for the eighteen-month period ended Dec. 31, 1957, are presented in Tables 40 and 41. All nurseries were asked to report quantities sold of stock propagated or imported during this period. Stock purchased from other nurseries in Canada was excluded to prevent duplication. A total of 269 nurseries reported shipments in 1957 as compared with 127 the previous season. Provincial distribution was as follows: Ontario 152, British Columbia 47, Quebec 27, Manitoba 15, the Maritime Provinces 13, Alberta 10 and Saskatchewan 5.

³ Includes Maritime Provinces for which insufficient information was reported.

Subsection 9.—Prices of Agricultural Produce

The monthly index of farm prices of agricultural products was designed to measure changes occurring in the average prices farmers receive at the farm from the sale of farm products. In comparing current index numbers with those before August 1957, certain points should be considered. Western grain prices used in the construction of the index before Aug. 1, 1957, are final prices for all grains. Since Aug. 1, 1957, only initial prices are available for western wheat, oats and barley. Any subsequent participation payments made on the 1957 crops will be added to the prices currently used and the index revised upward accordingly.

42.—Average Index Numbers of Farm Prices of Agricultural Products, by Province, 1950-57 and Monthly Indexes for 1956 and 1957

(1935-39=100)

NOTE.—A description of this index, its coverage and the methods used will be found in *DBS Quarterly Bulletin of Agricultural Statistics* for October-December 1946.

¹ No sales reported.

Subsection 10.—Food Consumption

Food consumption figures represent available supplies, including production and imports, adjusted for change of stocks, exports, marketing losses and industrial uses. All calculations are made at the retail stage of distribution, except for meats, for which the figures are worked out at the wholesale stage. The amount of food actually eaten would be somewhat lower than indicated because of losses and waste occurring after the products

reach the hands of the consumer. It should also be pointed out that there are minor inaccuracies in certain of the figures since statistics of storage stocks in the hands of retailers and consumers are not available.

All basic foods are classified under 13 main commodity groups. The total for each group is computed using a common denominator for the group, for example: milk solids (dry weight) in the dairy products group; fat content for fats and oils; and fresh equivalent for fruits. All foods are included in their basic form, that is, as flour, fat, sugar, etc., rather than in more highly manufactured forms.

The series in Table 45 represents the official estimates of yearly supplies of food moving into consumption, expressed in pounds per capita, for the years 1935-39 as an average for comparison with the years 1955, 1956 and 1957.

45.—Per Capita Supplies of Food Moving into Consumption 1955-57, with Average for 1935-39

¹ Excluding canned meats. ² Included with beef. ³ Includes commercial lard production and estimated lard equivalent of renderable pork fat available from all uninspected slaughter.

Section 5.—Agricultural Statistics of the Census*

Census of Agriculture statistics relating to farms, farm mechanization, electrification and area are included in this Section. More detailed information may be obtained from the *Census of Canada 1956*, Volume II.

For census purposes a farm is defined as a holding on which agricultural operations are carried out and which is three acres or more in size, or from one to three acres in size, and with an agricultural production in 1955 valued at \$250 or more. The holding may consist of a single tract of land or of a number of separate tracts held under the same or different tenures, and operated as a single unit. Where the farm was made up of several parts located in different municipalities, the 1956 Census reported the complete farm as one unit in the municipality where the headquarters was located. The same definition was used in the 1951 Census.

* Prepared in the Agriculture Section of the Census Division, Dominion Bureau of Statistics.

Farms Classified by Tenure and Condition.—Brief statistical information on the tenure and condition of occupied farm land as recorded at the 1951 and 1956 Censuses is given at pp. 455-456 of the 1957-58 Year Book. On the facing page is a graphical presentation showing the percentages of the farm land in each province under crop, improved pasture, summer fallow, woodland and other condition as at June 1, 1956; absolute figures will be found in the land classification table on p. 14 of this volume.

Number of Farms.—The number of farms in Canada at June 1, 1956, was 575,015, a decrease of 48,076 from the 623,091 farms recorded in the 1951 Census. As compared with 1951, all the provinces showed decreases in number of farms ranging from 5.8 p.c. in Alberta to 34.2 p.c. in Newfoundland.

47.—Number of Farms, by Province, Censuses of 1951 and 1956

Province or Territory	1951	1956	Percentage Change 1951-56
	No.	No.	
Newfoundland.....	3,626	2,387	-34.2

Yukon and Northwest Territories.....	4	22	+450.0
Canada.....	623,091	575,015	-7.7

Area of Farms.—The total area of occupied farm land in Canada was 0.1 p.c. less in 1956 than in 1951. Decreases in the Atlantic Provinces, Ontario, Quebec and British Columbia were slightly greater than increases in the Prairie Provinces.

48.—Area of Farms, by Province, Censuses of 1951 and 1956

Province or Territory	1951	1956	Percentage Change 1951-56

Farm Machinery.—The upward trend in the number of machines on farms in Canada continued through the 1951-56 period. For Canada as a whole, all types of machines included in the 1956 Census showed an increase in number and in farms reporting them.

49.—Farm Machinery, by Province, Censuses of 1951 and 1956

¹ Includes the Yukon and Northwest Territories.

Farm Electrification.—Nearly three-quarters of the farms in Canada reported electric power in 1956. Provinces were divided into two distinct groups—above and below the national average of 73.5 p.c. In the first group were Nova Scotia, New Brunswick, Quebec, Ontario, Manitoba and British Columbia in which the percentage of farms reporting electric power ranged from 81.9 p.c. in British Columbia to 89.1 p.c. in Ontario. The second group included Newfoundland, Prince Edward Island, Saskatchewan and Alberta where the percentages ranged from 39.7 p.c. in Prince Edward Island to 51.5 p.c. in Alberta.

50.—Farm Electrification, by Province, Census 1956

Section 6.—International Crop Statistics

Tables 51 and 52 are based on estimates published in Dec. 31, 1958 and Jan. 29, 1959, by the Foreign Agricultural Service, United States Department of Agriculture, and give the acreages and production of wheat and the production of oats and barley for the harvests of 1956 and 1957, with averages for the years 1950-54, in the leading countries of the world.

51.—Estimated Acreages and Production of Wheat Harvested in 1956 and 1957 in Specified Countries, with Average for 1950-54

Continent and Country	Acreages of Wheat			Production of Wheat

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Land is one of the bases of the Canadian economy and wise use of the land is the foundation of good forestry. In addition to providing the greatest amount of the most usable woods as economically as possible, good forestry aids in maintaining agricultural lands against drought and erosion, continuously protects water-catchment areas and assures supplies of water, furnishes cover for game and fur-bearing animals, and gives opportunity for recreation which only the forests can provide.

Section 1.—Forest Regions†

The forests of Canada cover a vast area in the north temperate climatic zone. Wide variations in physiographic, soil and climatic conditions cause marked differences in the character of the forests in different parts of the country; hence eight fairly well defined forest regions may be recognized. These regions, with the relative proportion of the total area of all forest regions occupied by each, are as follows:—

Region	Percentage of Forested Area	Region	Percentage of Forested Area
Boreal.....	82.1	Acadian.....	2.0
Great Lakes-St. Lawrence.....	6.5	Columbia.....	0.8
Subalpine.....	3.7	Deciduous.....	0.4
Montane.....	2.3		
Coast.....	2.2	TOTAL.....	100.0

Boreal Forest Region.—The Boreal Region comprises the greater part of the forested area of Canada, forming a continuous belt from the Atlantic coastline of Newfoundland westward to the Rocky Mountains and northwestward to Alaska. The white and the black spruces are characteristic tree species; other prominent conifers are tamarack ranging throughout the region, balsam fir and jack pine in the eastern and central portions, and

* Sections of this Chapter that deal with forestry and the federal forestry program were revised in the Forest Economics Section, Forestry Branch, Department of Northern Affairs and National Resources. Provincial forestry programs were prepared by the forestry officials of the respective provincial governments. Sections dealing with forest and allied industries, except as otherwise noted, have been revised in the Forestry Section, Industry and Merchandising Division, Dominion Bureau of Statistics.

† A more detailed discussion of forest regions is given in Bulletin No. 89, *A Forest Classification for Canada* by W. E. D. Halliday, a publication of the Forestry Branch, Department of Northern Affairs and National Resources, Ottawa. Accounts of variations in Canadian physiography and climate are included in the special article on The Climate of Canada, appearing at pp. 23-51 of this volume.

alpine fir and lodgepole pine in the western and northwestern parts. Although the region is primarily coniferous there is a general admixture of broadleaved trees such as the white birches and the poplars; these are important in the central and south-central portions, particularly where the region grades into the Grassland Formation of the prairies. In turn the proportion of barrens (non-forested rock, muskeg and tundra) increases in the northern parts until the region finally merges into the Tundra Formation. In the southern parts of the eastern portions of the region there is considerable intrusion of species from the Great Lakes-St. Lawrence Forest Region, such as the white and the red pines, yellow birch, sugar maple, black ash and eastern white cedar.

Subalpine Forest Region.—Coniferous forest found on the higher slopes of the mountains east of the Coast Ranges in British Columbia is known as the Subalpine Region. It extends northward to the divide between the drainage of the Skeena, Nass and Peace Rivers and that of the Stikine and Liard Rivers. The characteristic species are Engelmann spruce, alpine fir and lodgepole pine. There is a close relationship with the Boreal Region, from which the black and the white spruces and aspen intrude, more particularly in the northern parts. There is also some entry of Douglas fir from the Montane Forest, as well as western hemlock, western red cedar and amabilis fir from the Coast Forest. Other species found are western larch, whitebark pine and limber pine.

Montane Forest Region.—This region occupies a large part of the interior uplands of British Columbia, part of the Kootenay Valley and a small area on the east side of the Rocky Mountains. It is a northern extension of the typical forest of much of the western mountain system in the United States, and comes in contact with the Coast, Columbia and Subalpine Forests. Ponderosa pine is a characteristic species of the southern portions, to which it is restricted. Douglas fir is found throughout but more particularly in the central and southern parts. Lodgepole pine and aspen are generally present, the latter being well represented in the north-central portions. Engelmann spruce and alpine fir from the Subalpine Region become important constituents in the northern parts, together with white birch. The Boreal white spruce also enters here. Extensive bunch grass and sage brush communities of the Grassland Formation are found in many of the river valleys.

Coast Forest Region.—This is part of the Pacific Coast forest of North America. Essentially coniferous, the Coast Region consists principally of western red cedar and western hemlock, with Douglas fir in the south and Sitka spruce in the north. Amabilis fir and yellow cedar occur widely and, together with mountain hemlock and alpine fir, are common towards the timberline. Western white pine is found in the southern parts. Broadleaved trees such as black cottonwood, red alder and broadleaf maple have a limited distribution in this region. Arbutus and garry oak occur in Canada only on the southeast coast of Vancouver Island and the adjacent mainland. These are species that have entered from the Montane Forest in the United States.

Columbia Forest Region.—A large part of the Kootenay River valley, the upper valleys of the Thompson and Fraser Rivers, and the Quesnel Lake area of British Columbia contain a coniferous forest closely resembling that of the Coast Region. Western red cedar and western hemlock are the characteristic species of this Columbia Region. Associated with these are Douglas fir, which is of general distribution, and, in the southern parts, western white pine, western larch and grand fir. Engelmann spruce from the Subalpine Region is important in the upper Fraser Valley and is found to some extent at the upper levels of the forest in the remainder of the region. Towards lower elevations in the west and in parts of the Kootenay Valley, the forest grades into the Montane Region and in a few places into the Grassland Formation.

Deciduous Forest Region.—A small portion of this forest, widespread in the eastern United States, is found in southwestern Ontario between Lakes Huron, Erie and Ontario. Here with the broadleaved trees common to the Great Lakes-St. Lawrence Forest Region, such as sugar maple, beech, white elm, basswood, red ash, white oak and butternut, are

scattered a number of other broadleaved species which have their northern limits in this locality. Among these are the tulip-tree, cucumber-tree, papaw, red mulberry, Kentucky coffee-tree, redbud, black gum, blue ash, sassafras, mockernut and pignut hickories, and scarlet, black and pin oaks. Black walnut, sycamore and swamp white oak also are largely confined to this region. Conifers are few, mainly scattered white pine, tamarack, red juniper and hemlock.

Great Lakes-St. Lawrence Forest Region.—Along the Great Lakes and the St. Lawrence River valley is a forest of a very mixed nature, characterized by the white and the red pines, eastern hemlock and yellow birch with certain dominant broadleaved species common to the Deciduous Forest Region, such as sugar maple, red maple, red oak, basswood and white elm. Other species with wide range are the eastern white cedar, the largetooth aspen and, to a lesser extent, beech, white oak, butternut and white ash. Boreal species, such as the white and the black spruces, balsam fir, jack pine, poplar and white birch, intrude from the north, and in the east, red spruce from the Acadian Forest becomes abundant in certain areas.

Acadian Forest Region.—The greater part of the Maritime Provinces contains a forest closely related to both the Great Lakes-St. Lawrence and the Boreal Regions. The characteristic species is red spruce, with which are associated balsam fir, yellow birch and sugar maple, with some red pine, white pine, beech and hemlock. Other species of wide distribution are the black and the white spruces, red oak, white elm, black ash, red maple, white birch, wire birch and the poplars. Eastern white cedar and jack pine, however, are restricted almost entirely to the western half of the region.

Section 2.—Forest Resources

The forested area of Canada is estimated at 1,612,593 sq. miles, and about 60 p.c. of that area is capable of producing merchantable timber. Of this productive area, 720,421 sq. miles are now accessible for commercial operations and the remainder, at present beyond the reach of economical transportation facilities, contains much valuable timber that will be brought progressively into commercial development as demand requires its use and as transportation becomes available. The great areas of forest considered commercially non-productive are nevertheless of significant value to the country in providing valuable protection for drainage basins and shelter for game and fur-bearing animals. The total forested area of Canada, classified by type of growth and by province is given in Table 1, p. 14.

There are more than 150 tree species in Canada of which 31 are conifers, commonly called 'softwoods'. About two-thirds of these softwoods and 10 p.c. of the large number of deciduous or 'hardwood' species are of commercial importance. Approximately 83 p.c. of the volume of merchantable timber is made up of softwood species. The dominant species existing in each forest region are given in Section 1. Detailed information is contained in Forestry Branch Bulletin No. 61, *Native Trees of Canada*,* published by the Department of Northern Affairs and National Resources.

The predominant part played by the lumber and other forest products industries in the development of Canada has resulted in a widespread tendency to evaluate the forests in terms of timber alone. A growing realization of the economic importance of the non-timber values, however, is bringing about increasing recognition of the true value of the forests and is thus developing a broader concept of forestry.

* Obtainable from the Queen's Printer, Ottawa, price \$1.50.

¹ Ten inches D.B.H. and over (suitable for saw timber).² Four to nine inches D.B.H. (units of 85 cu. feet).

Tenure of Forest Land.—Corporations and private individuals own 10 p.c. of the productive forest land of Canada and 90 p.c. is in the possession of the Crown in the right of the federal or the provincial governments. Rights to cut Crown timber under lease or licence have been granted on 20 p.c. of the productive forest land; the remainder comprises unalienated productive forest areas and small areas of logged lands that have reverted to the Crown.

Woodlots on the 575,000 farms across Canada comprise about 5 p.c. of the total accessible productive forest. These small wooded tracts ranging in size from three or four acres to 200 or more acres are among the most accessible forests in Canada. Further, the woodlots of Eastern Canada are, in general, highly productive because they lie in the southern parts of the country and frequently occupy soils that are considerably higher in quality than those typical of the northern forests.

Section 3.—Forest Depletion

General information on forest depletion and increment as well as statistics on forest fires and fire losses are presented in this Section. The scientific control of the influences that account for wastage, such as forest fires, insect pests, etc., is dealt with in Section 4.

The average annual rate and cause of depletion of reserves of merchantable timber during the ten years 1947-56, together with annual data for 1956 and 1957, are given in Table 3. Of the total depletion of the forests in the ten-year period, 93 p.c. was utilized and 7 p.c. was destroyed by fire. (Information on the extent of damage caused by agencies other than fire, such as insects, disease and natural mortality, is not available.) The average annual utilization of 3,146,846,000 cu. feet comprised 46 p.c. logs and bolts, 39 p.c. pulpwood, 12 p.c. fuelwood, and about 3 p.c. miscellaneous products. About 6 p.c. of the total utilization was exported in the form of logs and bolts and pulpwood.

The accessible portion of the productive forests of Canada, covering an area of 720,421 sq. miles, constitute the reserve from which forest production will be obtained for many years to come. The supply of merchantable timber on this area is estimated at 585,788,000 cu. feet and the utilization in 1957 of 3,096,000,000 cu. feet therefore represented 0.5 p.c. of the accessible productive volume. However, it should be noted that utilization does not occur evenly throughout the accessible productive forest area but is concentrated on the relatively small area of occupied forest land (land under lease, licence or private ownership). Thus overcutting may occur on many of these occupied areas, emphasizing the need for orderly management of all commercial forests if the forest industries are to maintain a dominant position in the Canadian economy.

The more efficient utilization of cut timber is an important factor related to forest depletion, for there is little doubt that in the past too high a percentage of the sawn log was discarded. However, changes of great significance have taken place recently in the uses of wood, permitting the utilization of sizes, qualities and species previously considered unmerchantable. The development and manufacture of rayon, cellophane and other products of the cellulose industry have extended the use of wood and the increasing production of plastic-wood products, fibre board and laminated wood has resulted in greater use of inferior grades of wood and species of trees and therefore in the more complete utilization of forest resources and the elimination of much waste.

¹ Excludes Newfoundland.

² The figure for depletion does not include wastage caused by agencies other than fire, such as insects, diseases, and natural mortality, for which no reliable estimates are available. It represents an average annual depletion of 7 cu. feet per acre on the accessible productive forest area; a much higher rate of depletion occurs on the more accessible occupied productive forest lands.

Forest Fire Statistics.—During 1957 the number of forest fires within the provincial boundaries of Canada was 5,950 compared with 5,486 in 1956 and an annual average of 5,227 for the period 1947-56. Though there were more fires in the later year, the total area burned was much smaller than in the previous year or in the average ten-year period, and more than half the loss was in small timber. As a result, the value of the loss in 1957 was only about one-tenth of the loss in 1956. About 32 p.c. of the forest fires in 1957 were caused by camp fires and smokers, 15 p.c. by railways and 14 p.c. by lightning. Fires in the federally administered Yukon and Northwest Territories were more numerous in 1957 than in the previous year but caused much less forest damage.

Section 4.—Forest Administration, Research and Conservation

Subsection 1.—Federal Forestry Program

Administration.—The Federal Government is responsible for the protection and administration of the forest resources of the Yukon and Northwest Territories and of other federal lands such as the National Parks, forest experiment stations, military areas and Indian reserves. The Federal Government also administers the Canada Forestry Act which provides, among other things, authority for the operation of forest experiment stations and forest products laboratories.

The Act also authorizes the granting of federal assistance to the provinces to enable them to improve the management of their own forests. Under the Federal-Provincial Agreements signed under authority of the Act, seven of Canada's ten provinces have undertaken a forest inventory with federal financial assistance, and six provinces have reforestation agreements. The history of the Federal-Provincial Agreements and their relation to the Canada Forestry Act is described in a special article appearing in the 1956 Year Book, pp. 459-466. In 1957 the Federal Government broadened the implementation of the Canada Forestry Act by providing financial assistance to the provinces for forest fire protection. A total of \$5,000,000, available over a five-year period, may be applied to capital expenditures, such as the cost of fire protection equipment and improvements, and of forest access roads, trails and buildings required for forest fire protection.

The Forestry Branch of the Department of Northern Affairs and National Resources has been continuing work on the aerial forest mapping of federally administered lands and other territories. For example, forest inventory maps have been prepared from air photographs for portions of the Yukon and Northwest Territories and data have been collected on the ground to support the interpretation of the photographs. The development of instrumental aids in forest photography and in interpretation is being continued by this Branch.

Forestry Research.—In the field of forestry the chief responsibility of the Federal Government is to carry out research in problems affecting the forests of Canada and their development, conservation and more effective utilization. To this end, forest research and forest products research facilities have been expanded greatly throughout the country during the past five years. The Forestry Branch of the Department of Northern Affairs and National Resources conducts research in forest economics, silviculture, management, forest ecology, tree physiology, tree breeding, forest inventory methods, forest fire protection, and in forest products. An extensive program of research is under way on the 186 Forest Experiment Stations in operation across the country (*see* p. 15) and on other lands, where an increasing proportion of the research in silviculture and forest management is done in co-operation with provincial forest services and wood-using industries.

Research in forest economics is concentrated on problems associated with the production of wood in the forest, land use, land tenure, taxation, forest legislation and administrative techniques, forest management, forest labour and the valuation of forest lands. Economics research also involves continued study of the broad developments in the forest industries.

Research in silviculture and management is concentrated mainly in (a) assessing the factors responsible for success or failure in securing natural regeneration following practical cutting methods and different treatments of seed beds, (b) comparing different methods of seeding and planting, and (c) determining the effects of different methods of harvest cutting on the development of residual trees and stands. Studies are made of growth and yield and of successional changes in most of the important forest types. Techniques used in mensuration are constantly under review and study; new methods are tested and developed. Application of silvicultural techniques as well as research in regulation of cut and in methods of protection are aimed at determining how forests may be maintained at the highest levels of production. The relationships between forest growth and site are being studied with a view to the assessment of long-term productivity.

The requirements of light and temperature that will produce optimum conditions for growth and development are being determined for the seedlings of many important species of trees. The physiological processes of growth and reproduction are under investigation in a limited number of species. The tree breeding program is directed towards selecting and developing superior strains and improving techniques for propagating new strains through artificial or controlled pollination.

Forest fire protection is a vital problem and is therefore a major concern of federal authorities. In forest fire research the federal Forestry Branch is working towards full co-operation with the provincial forest services in achieving the best methods of forest fire protection. The leading contributions of the Branch have been in the field of fire danger measurement and in the development of equipment and techniques for fire fighting. The more important studies being undertaken at present include development of methods and techniques for classifying fuel types and mapping them, development of methods of rating the severity of fire seasons and of determining the efficiency of fire-protection associations and testing of equipment, such as back-pack tanks and hose, used in fire suppression.

Research in forest inventory methods is of increasing importance because of greatly expanded programs of forest inventories being conducted in most provinces and in the northern territories. Data from air photographs are correlated with field work to develop new techniques of timber estimating, which is being facilitated by the use of stand volume tables. Various methods of field sampling are being investigated and compared. Research is continuing in methods for measuring tree images and tree shadows to determine heights, crown widths, canopy density and other data from photographs taken in different seasons of the year under various conditions. The use of large-scale photography of sample areas is also being investigated and studies are being made in the identification of species and sub-types. Construction of suitable photogrammetric and other scientific apparatus includes equipment required by the forestry tricamera method of air photography which has been developed to provide maximum forestry information at minimum cost, and the shadow height calculator which facilitates the determination of tree heights from shadows in air photographs. Studies in the development and use of new equipment are at present being directed to a considerable extent to testing the application of the relascope and wedge prism as instruments suitable for providing data for inventory purposes and in studies of growth of stands.

Forest Products Research.—The Forest Products Laboratories of Canada, a Division of the Forestry Branch of the Department of Northern Affairs and National Resources, conducts forest products research in its laboratories at Ottawa and Vancouver. This research is aimed at supplying the basic and practical knowledge required for the best possible utilization of Canada's forest resources and the provision of goods of satisfactory quality to the ultimate consumers. Research includes the determination of the physical, mechanical and chemical properties of wood and their relation to adaptability in use; studies of the factors affecting the quality of wood and of manufactured wood products; determination of the factors that cause wood waste in logging and manufacturing; research and investigation on the preservative treatment and painting of wood and on the use of wood for the manufacture of wallboards, alcohol, turpentine, and extractives; studies to determine possible new economic and more valuable uses for woods; and research aimed at determining methods and means for the practical and economical utilization of all wood substance available from the annual timber harvest. Additional work includes the application of laboratory findings to the standardization of lumber grades, development of structural forms and practices, and the improvement of timber specifications in the building codes of Canada. By means of numerous technical publications and through other channels continuous effort is devoted to the widespread dissemination of research results. To assure that research programs are kept abreast of industrial requirements, the Forest Products Laboratories maintain close co-operation with similar organizations in other countries, as well as with the provinces and the forest-based industries generally.

Pulp and Paper Research.—The Pulp and Paper Research Institute of Canada, with laboratories at Pointe Claire and Montreal, Que., is a corporation supported jointly by the Federal Government, the Canadian pulp and paper industry, and McGill University. It carries out research in the whole broad field of pulp and paper processing, from the growth and harvesting of the forests through the various chemical and mechanical manufacturing processes to the properties of end-products, including the improved utilization of both liquid and solid wastes. Further details are given at pp. 474-476.

Forest Biology.—Research on forest insects and diseases is carried out by the Research Branch of the Department of Agriculture which maintains regional laboratories and field stations in all principal forested regions of Canada. The forest insect and disease survey is a Canada-wide project conducted by the Branch in co-operation with the provincial forest services and forest industries, the primary objective of which is to maintain an annual census of forest insect and disease conditions, and to detect and predict the occurrence of outbreaks. Results of the survey are made immediately available to the owners and operators of forest lands for use in planning salvage programs, directing control operations or other measures to reduce damage. An important secondary objective of the survey is extension of knowledge of the insects and fungi affecting forest trees, including their life histories, ranges of distribution and host-parasite relationships.

The research programs of the regional laboratories are designed to lead to comprehensive understanding of the biology and ecology of the more destructive forest insects and fungi, and the causes of fluctuations in abundance or severity of damage in time and place. Problems under intensive study include insect defoliators, leaf diseases, sucking insects, stem cankers, bark- and wood-boring beetles, trunk and root decays, tip- and root-boring insects, and diseases of tree seedlings in forest nurseries. A recent development is the initiation of investigations of virus diseases of forest trees. Laboratory research on development, physiology, nutrition and taxonomy complements the field ecological studies of insects and fungi in the forest environment. Problems of broad national importance in insect pathology, cytology and genetics, bioclimatology and chemical control are investigated by Branch sections which are appropriately staffed and equipped for research in these special fields.

The Research Branch also carries out experiments in control, utilizing cultural techniques, chemicals and biological control agents, including parasites, predators and insect pathogens. Technical advisory services are provided in evaluating possibilities of eradication or control, or other applications of research results. Recent examples include recommendations for reduction of seedling losses in forest tree nurseries through cultural techniques and chemical applications; the co-operative organization of cull surveys to improve forest inventories; consultation with local authorities on the Dutch elm disease problem in New Brunswick, Quebec and Ontario, designed to limit spread and damage through control of the disease vectors and sanitation procedures; and technical co-operation with provincial governments and industrial agencies in the organization of spraying operations against the spruce budworm in New Brunswick and Quebec, and the black-headed budworm and ambrosia beetles in British Columbia.

Subsection 2.—Provincial Forestry Programs

All forested land in provincial territory, with the exception of the minor portions in National Parks, forest experiment stations, military areas and Indian reserves (see Table 2, p. 15), is administered by the respective provincial governments. The forestry program of each province is outlined below.

Newfoundland.—Geographically, the Province of Newfoundland has two separate regions—the Island and Labrador on the mainland. The productive forested land of the Island is estimated at 12,758 sq. miles and of Labrador at 17,747 sq. miles, a total of 30,505 sq. miles. Only 578 sq. miles are classified as farm woodlots. Most of Labrador's forests are leased but are as yet virtually untouched.

A large part of the forests in the interior of the Island are leased, licensed or owned by paper companies, but a three-mile wide belt along most of the coastline is retained as unoccupied Crown land for the purpose of providing firewood, construction material, fencing material, etc., for the local population. Within this coastal forest belt every household has legal right to cut 2,000 cu. feet of wood a year for domestic use. This form of cutting is generally without any control or restrictions but a policy is being introduced whereby cutting in certain 'management areas' is controlled by forest officers.

Commercial timber cutting on unoccupied Crown lands has been by permit since 1952; permits for amounts up to 120 cords per person are issued by the field staff but permits for larger quantities must be approved by the government. The number of large permits varies from 10 to 25 each year and usually cover stands damaged by wind, fire or insects. Unoccupied Crown land is divided into 21 Forest Inspector Districts averaging 281 sq. miles in size. The Island is also divided into three Forest Regions each with a Supervisor who is in charge of Inspectors and is responsible to the Deputy Minister of Resources.

The lack of roads into the remote forests makes fire prevention difficult. Twenty-three well-equipped forest fire depots with radiotelephones are scattered along the coast, and 14 lookout towers, also equipped with radiotelephones, cover a large portion of the forested area. One aircraft, equipped with water-dropping tanks, is stationed at Gander throughout the fire season; it patrols isolated forests and transports fire fighting equipment and crews when necessary. A helicopter is also used at times for this purpose. The forest fire staff, including permanent Inspectors, is approximately 110. The two paper companies maintain their own fire protection organizations.

Forest research for Newfoundland is performed by the Forestry Branch of the federal Department of Northern Affairs and National Resources. No reforestation is done in the province.

Prince Edward Island.—The Forestry Division of Prince Edward Island, formed under the Department of Industry and Natural Resources in 1951, became part of the Department of Agriculture in 1955.

Almost all of Prince Edward Island's woodland is privately owned, so that the Forestry Division is mainly concerned with planting, woodlot management and fire protection. A small nursery has been established jointly with the Federal Government to deal with the Island's needs and many people take advantage of seedlings, supplied by this Division at reasonable cost, to restock barren areas. The Federal Government pays half the cost of reforesting waste lands.

In proportion to its size, Prince Edward Island exports a great deal of pulpwood. This export, combined with the fuelwood and lumber cut each year, led the Forestry Division to inaugurate a program designed to educate the owner in the proper care and management of his woodlot.

Fire protection does not constitute too great a problem. Wooded areas are scattered in patches throughout the province and since a network of roads makes all woodlots accessible, equipment can be brought to the scene of a fire quickly and easily.

Research is limited mainly to reforestation problems and these are studied in the provincial nursery.

Nova Scotia.—Forest administration in Nova Scotia is conducted by the Department of Lands and Forests which, in co-operation with other government agencies, the forest industry and the public, endeavours to protect and rejuvenate provincial forests. The Department employs a professional staff of 25, in addition to a large complement of rangers, surveyors, and fieldmen.

Of the province's total area of 21,425 sq. miles, a recently completed Provincial Forest Inventory classified about 15,080 sq. miles as forested. This inventory excluded Cape Breton Highlands National Park and areas to the north of the Park. Crown holdings constitute only about 20 p.c. of the province's total area.

An active reforestation program has been encouraged since 1926. Each year, seedlings from the forest nurseries are transplanted to burned-over areas of Crown lands. Conservative cutting is promoted through the requirements of the Small Tree Conservation Act. Standing timber on Crown lands is offered for sale through public tender, and logging is supervised by the District Foresters of the Department of Lands and Forests.

Responsibility for the forest fire control program rests with the same Department. Fire prevention messages are presented through the media of the press, radio and television. Early warning of fires is facilitated by a detection system consisting of 27 towers, five of them privately owned, and an aerial patrol. Integration of the detection system and the suppression force is aided by radio and telephone communications. Three experienced fire suppression crews located at strategic places as well as local fire ranger personnel are available to fight fires. Equipment is supplied from caches and depots established throughout the province.

Access roads into Crown land timber areas are being constructed under Dominion-Provincial Agreements. These are valuable for protection purposes as well as for management programs.

The forest industry consists of about 600 sawmills, one pulp and paper mill, and two pulp mills. Establishment of a third pulp mill is now being surveyed and studied. Together with the pulpwood export trade, pit prop production, and the box and barrel industry, these mills account for the major part of the annual wood use, equivalent to about 1,375,000 cords.

Forest research is conducted by Federal Government agencies and the Nova Scotia Research Foundation. Investigations concern stand improvements, cutting and manufacturing methods, production efficiency and costs in sawmilling, regeneration, insect and disease activities, and tree physiology.

New Brunswick.—More than 80 p.c. of the area of New Brunswick is classed as productive forest of which the Crown, in right of the province, owns about 40 p.c. About 2 p.c. is owned by the Federal Government and the remainder is privately owned. A provincial inventory, part of the national forest inventory, is under way, the results of which will indicate the nature and extent of the forests of the province. The productive forest area is estimated at 23,808 sq. miles and the total volume of wood in merchantable sizes at 16,900,000,000 cu. feet; of the latter, coniferous species make up 71 p.c. and deciduous species 29 p.c. The New Brunswick Forest Development Commission in its report submitted in June 1957 indicated that production of forest industries could be doubled in value within two decades and recommended sweeping changes in provincial government policy.

Protection from forest fires, the first requirement for forest conservation, is mainly the responsibility of the Forest Service which also carries out duties in connection with game protection, colonization and the administration of provincial Crown lands. A large-scale aerial spraying program to protect balsam fir and spruce from the spruce budworm has been carried on since 1952 by a Crown company sponsored by the federal and provincial governments and representatives of the forest products industries.

Timber licences issued by the province authorize operators to cut and remove forest products in accordance with forest management plans and cutting permits. Stumpage dues are paid to the province when products are cut by the licensees.

New Brunswick does not maintain a provincial forest research organization. There is, however, extensive co-operation between the province and the federal Forestry Branch in conducting forest research. The University of New Brunswick also has undertaken a small number of forest research projects in co-operation with the National Research Council, the Provincial Government, and other interested institutions.

Quebec.—The commercial forests of the Province of Quebec cover an area of 220,275 sq. miles extending from its southern borders to latitude 52° north, between the frontier of Labrador in the east, and the Eastmain River Basin in the west. Of this total, 88,023

sq. miles are classed as occupied productive forest land, 21,842 sq. miles of it privately owned, 225 sq. miles federal Crown forests and the remainder provincial Crown land on which leases and permits have been granted. Approximately 132,000 sq. miles of the latter are vacant lands. About two-fifths of the annual cut in the forests of Quebec comes from privately owned lands.

The limits reserved for forest industries are administered by the Department of Lands and Forests and the technical work such as inventory, reforestation, superintendence of cutting, control of culling, verification of plans for development, collecting of stumpage dues, etc., is the responsibility of the Forest Service. These limits are either leased by auction after public notice has been given, or assigned under a special law. The price of the licence is fixed by auction or by Order in Council subsequent to specific legislation. The government reserves the right to dispose of the water powers situated on the limits leased.

A tree-felling permit, which is valid for one year, is renewable if the holder has complied with the conditions imposed; it may be transferred with the authorization of the Minister of Lands and Forests. The lessee of a limit must pay a ground rent in addition to the price of licence and must forward, three months before the cutting begins, a plan of the operations. Wood cut must be measured by a licensed culler and at the end of the operations the limit-holder must produce a sworn statement of quantities cut.

The Forest Service endeavours to promote the use of silvicultural methods among the owners of wooded farm lots and small forest areas.

Quebec's forest protective system comprises three organizations: the Protective Service, the protective associations and the non-affiliated lease holders or owners. The Protective Service is a government body established within the Department of Lands and Forests in 1924 to enforce legislation and regulations governing forest fire protection and to protect vacant Crown lands, township reserves and colonization territories. The protective associations, of which there are six, are syndicates of lease holders and owners who have availed themselves of their right to form an association to satisfy the law which compels them to protect their limits or private forests of 2,000 acres or over. Members assume operating expenses in proportion to the area owned by each but the Department assumes half the costs of fire fighting incurred by the associations. The third group is composed of lease holders and of owners who prefer to discharge their obligations personally as far as forest protection is concerned. They enjoy the same privileges and their obligations are the same as those imposed upon the associations.

To perpetuate the forestry program of the province, the Department has established a number of nurseries, the first at Berthierville in 1908. This nursery has three sections: one wooded with a variety of valuable species of mature age, one serving agricultural purposes, and another devoted to forestry experiments and the cultivation of trees for reforestation or ornamentation. More recently the Grandes Piles nursery and the Gaspé nursery were organized and there are also nurseries in the following counties: Abitibi-East, Témiscamingue, Saguenay, Îles de la Madeleine, Rimouski, Roberval, Rivière du Loup, Témiscouata and Chicoutimi. Their object is the preparation of plants for reforesting nearby districts. 'Floating' nurseries supervised by the engineers of the Forest Extension Bureau and intended especially for growing reforestation plants for private properties, are located at Pont Rouge, Sherbrooke, Scott, St. Hyacinthe, Victoriaville and Mont Joli. The plants are supplied free of charge on request. A dynamic reforestation program is now under way in the province, with an ultimate objective of 10,000,000 plants yearly on private grounds.

The Bureau of Silviculture and Botany and the Forestry Products Laboratory, both subsidized by the Department, are actively engaged in scientific research work in the forestry field. The Bureau studies the possibilities of utilizing spoil-heaps of gold and asbestos mines, tests the fertility of soils in the spruce groves, classifies forests according to type of vegetation, and studies growth and yields of stands in the timber limits by means of permanent research spots. The Forestry Products Laboratory, located at the Duchesnay Forestry Station, examines developments in the field of chemical conversion of wood and in the use of forestry by-products.

Ontario.—Accumulative improvements in organization and technical advances in forest management and forest protection have been achieved under the long-term policy of the Ontario Department of Lands and Forests. The object within view is a permanent balance between forest growth and forest harvesting—a high, sustained yield of forest products in perpetuity. The immediate benefits of the long-range programs are represented by the improvement in fire control. Although, because of increased forest travel by sportsmen and summer vacationers, there was a large increase in the number of fires in 1957—1,641 as compared with an annual average of 1,389 in the preceding ten years—the area destroyed was limited to 46,500 acres compared with an average during the preceding ten years of 203,500 acres, a reduction from 147 to 28 acres per fire.

Most of the forest fires (85 p.c.) were caused by human carelessness, but the value of timber destroyed on Crown lands in 1957 was estimated at only \$463,000 (\$2,870,000 in 1956), this relatively low amount being apparently the result of continuing improvement in fire detection and suppression. Over 300 lookout towers are supplemented by aerial patrols and hundreds of two-way radios provide efficient communications. Land, water and air transport permit rapid concentration of trained fire fighting crews well supplied with modern equipment, much of it developed within the Department. An important innovation during the past year was the dropping of water from aircraft to check fires.

With improved protection against fires, insects and diseases, greater benefits are expected from the increasing rate of reforestation. During the year ended Mar. 31, 1958, 9,500,000 nursery-produced forest trees were planted on Crown lands, 4,500,000 were planted on areas managed in co-operation with municipalities and conservation authorities, and 12,500,000 were supplied to private land owners. With the expansion of five nurseries and the development of eight new nurseries, production is expected to reach 60,000,000 trees by 1962 or 1963.

An important part of the Ontario program is the stimulus given to natural regeneration of forest trees. New developments include the improvement of the forest seed bed; cutting methods that increase the natural seed supply and promote survival of seedlings; and herbicides which are sprayed from aircraft to free valuable young conifers from the competition of worthless shrubs. After ten years of experimentation, scientists in the Department's Division of Research have developed a white pine that is expected to be highly resistant to the blister rust disease. A fast-growing hybrid of poplar and aspen has also been developed. Many more investigations of tree strains, diseases, pests and soils are being continued.

To place Crown forest lands directly under professional management, 81 Crown Management Units have been formed (as of Mar. 31, 1958). Special mention may be made of the Petawawa Management Unit as the first of a series of projects to rehabilitate the pineries of the Ottawa-Huron area. In various districts, advanced forestry is being practised in pilot units to develop procedures and train personnel for 'stand' improvement all across the province.

In addition, master plans for areas totalling 85,000 sq. miles have been received from industrial licensees whose management operations and cutting practices are subject to governmental approval. Mills are limited to a size proportionate to the raw material readily available; the maximum cut allowed any unit in one year is 85,000,000 feet. Crown timber dues have increased steadily from \$11,396,460 in 1952 to \$14,431,008 in the year ended Mar. 31, 1958.

Under agreements with 107 large operators (over 50 sq. miles) and 316 smaller operators, wasteful practices are defined and prohibited. The integrated operations now required ensure that no part of the tree is wasted—a telephone pole, a railway tie, a mine timber, pulpwood and other products may all come from the same tree.

Looking ahead to the expanded forest regeneration program of the coming years, the majority of licensees have promised their co-operation in following Departmental standards and specifications. The approximately 300 foresters employed by private industry in Ontario will materially assist Departmental foresters (who now number 182) in the continuous improvement of provincial forests.

Manitoba.—The forests of Manitoba are administered by the Forest Service, a Branch of the Department of Mines and Natural Resources. The Service is headed by a Provincial Forester and the province is divided into four Forest Districts—Northern, Southern, Eastern, and Western—each with a District Forester in charge. The Whiteshell Forest Reserve, which is an important recreational area, is also supervised by a Forester. Each Forest District is subdivided into Forest Ranger Districts of which there are 40, each in charge of a Forest Ranger.

The cutting of mature timber is governed by timber sale, licensed timber berth, pulpwood lease, or timber permit. Timber sales are disposed of by public auction and cover periods of from one to seven years; timber berths cover certain areas granted before 1930, the date of the transfer of the natural resources from the Federal Government to the province; pulpwood leases are granted over an area of 2,748 sq. miles; and timber permits are granted to settlers and small operators at appraised rates for a period of one year or less.

An inventory of the forest resources of the province was completed in 1956 as part of the conservation plan. On the basis of this inventory and other information, working plans with annual allowable cuts on a sustained-yield basis have been brought into operation in the more accessible areas.

Fire protection, also part of the conservation plan, is one of the most important activities of the Forest Service. Fires are detected by air patrol, lookout tower and road patrol and rapid communication is maintained within the Service by radio and telephone. The Air Service transports men and equipment to fires in areas beyond the reach of roads. The main air base is at Lac du Bonnet and summer air bases are maintained at The Pas, Norway House and Thicket Portage. The total area under fire protection is about 97,000 sq. miles.

Regeneration of the forest is mainly dependent on natural means although 4,000,000 trees were planted during the past five years as part of the Federal-Provincial Agreement (see p. 465). The Pineland Forest Nursery is operated at a point near Hadashville to supply planting stock for denuded areas of Crown land and to furnish farmers with shelter-belt and woodlot seedlings.

The province has no forestry research organization but co-operates with several federal services which maintain two research areas.

The Department of Natural Resources Conservation Branch distributes information covering all aspects of the Department's resource management programs. A large part of the Branch work, particularly during the summer, is devoted to publicizing the activities of the provincial forest management program. Film and lecture tours are conducted, pamphlets distributed and training and assistance for field staff provided, all with the objective of making the public aware of the great value of the provincial forests, and of the need for their wise use and protection.

The Department of Natural Resources co-operates fully with federal authorities in investigating and controlling forest damage resulting from insects and diseases.

Saskatchewan.—The forests of Saskatchewan cover 117,750 sq. miles, or 54 p.c. of the total land area of the province. The provincial forests, which account for 88 p.c. of the total forest land, are administered by the Forestry Branch of the Department of Natural Resources, under authority of the Forest Act. It is the responsibility of the Forestry Branch to devise policy that will regulate all phases of forest activity so that the people of Saskatchewan may benefit from this resource in perpetuity. Cutting of white and black spruce and jack pine timber on Crown land for commercial purposes is the exclusive right of the Saskatchewan Timber Board, a Crown corporation.

The policy determined by the six divisions of the Forestry Branch—Administration, Fire Control, Inventory, Management, Silviculture and Research—is carried out on a regional basis under the supervision of a regional superintendent who is directly responsible to the Regional Administration Branch of the Department of Natural Resources. This Branch implements the policies conceived by program branches such as the Forestry

Branch. However, the Forestry Branch provides liaison between the Administration and the Regions for implementation of new forest practices and procedures and assesses the results.

The detection, suppression and prevention of forest fires is the responsibility of the Fire Control Division of the Forestry Branch. The Division maintains a network of 85 lookout towers equipped with two-way radio facilities. In periods of high hazard, four aircraft are kept on constant patrol over areas not under tower surveillance.

To aid conservation, the great expanse of forest area has been divided into smaller, more accessible units. A system of roads and fire guards has been developed to facilitate movement of fire fighting personnel and allow the caching of fire fighting tools at strategic locations in the forests, as well as at conservation officers' headquarters. Standby crews are ready to move quickly and heavy equipment is available when needed; a group of 16 fire fighters, organized in 1948, is maintained primarily to parachute on fires in remote areas, and to combat the blaze until other personnel can reach them.

Alberta.—The 161,473 sq. miles of provincial forests in Alberta are administered by the Forests Division of the Department of Lands and Forests at Edmonton. The Division is composed of five forestry Branches under a Director of Forestry: Administration, Forest Protection, Forest Management, Forest Surveys, and Radio.

The Administration Branch supervises all branches, maintaining general control over revenue and expenditure, deals with personnel and conducts a Forestry Training School which offers in-service training for forest officers and other employees.

Protection of the forests is in the charge of the Forest Protection Branch and all field personnel. For ease of administration, the forested area has been divided into seven Divisions, each responsible for the forest within its boundary. These Divisions in turn are composed of Ranger Districts in which all activities are supervised by the district forest officer responsible to his divisional superintendent. The divisional staffs include an assistant clerk, radio technician, radio operator and seasonal help such as lookout-men, standby fire fighting crews and labourers. These employees are responsible for fire prevention, detection and suppression and the supervision of logging and milling operations, timber cruising, and construction and maintenance of forestry projects.

Timber matters dealt with by the Forest Management Branch include setting the standard of timber, setting and supervising methods of cutting, ensuring efficient operation of mills, collection of Crown dues, and implementation of forest management plans. Much of the field work in connection with these duties is accomplished through the divisional staffs.

The Forest Surveys Branch is the technical forestry branch and its main charges include forest management planning, the forest inventory, and forest cover map-making for timber sale and fire damage evaluation purposes. Temporary cutting control plans have been completed for those areas south of the 57th parallel, and management plans are being prepared for the Slave Lake region. All timber will eventually be disposed of according to management plan under a system of sustained yield.

Development and maintenance of communications is the function of the Radio Branch. Central stations are maintained at Edmonton and Calgary with smaller stations located at divisional headquarters, lookout towers and Ranger Districts. A number of portable and mobile stations located in forest divisions form a comprehensive communications network.

Conservation of 9,000 sq. miles of forest comprising the Rocky Mountains Forest Reserve is administered by a joint provincial-federal agency, the Eastern Rockies Forest Conservation Board with offices at Calgary (*see* p. 108). The area is composed of three forests which are subdivided into Ranger Districts. The Superintendent in charge of each forest is responsible to the administrative officer in Calgary; his decisions are based on policies formed by the Board which comprises one federal and two provincial members. This Reserve includes the headwaters of the main prairie river system.

Research in general is carried out by the Forestry Branch of the federal Department of Northern Affairs and National Resources (which maintains the Kananaskis Experiment Station) and by the Science Service of the federal Department of Agriculture.

British Columbia.—The productive forest land of British Columbia in 1958 was inventoried at 208,411 sq. miles and in addition there were 5,154 sq. miles of forest land classed non-productive. Of the productive area, immature timber occurred on 95,739 sq. miles; 84,275 sq. miles carried matured timber with a total volume of 318,000,000,000 cu. feet; 28,397 sq. miles, including areas of recent burn, cut-over or windfall not yet re-stocked, were unclassified.

For administrative purposes, the province is divided into five Forest Districts with regional headquarters at Vancouver, Prince Rupert, Prince George, Kamloops and Nelson. Further decentralization of authority is effected by subdivision of the Forest Districts into Ranger Districts. There are approximately 25 Ranger Districts in each Forest District. Twelve directional, servicing, or policy-forming divisions constitute the head office of the Forest Service at Victoria.

Vigorous efforts are being made to bring British Columbia's forest resources under sustained-yield management and the forest industries are making definite progress toward total utilization of their raw materials. The problem is urgent despite the fact that, with a present annual cut of approximately 1,100,000,000 cu. feet, the total inventory would appear sufficient to support present needs in perpetuity. More than one-half of the present cut comes from the Coast (Wet Belt) forests which also comprise the majority of the privately owned, leased or licensed forests. This area is being overcut at the present time, whereas large areas of northern forest land remain untouched.

Several systems of timber disposal are in effect. The most publicized is the Tree Farm Licence which constitutes a contract between the government and a company or individual whereby the latter agrees to manage, protect and harvest an area of forest land for the best possible return, in exchange for the right to the timber crop on the area in perpetuity. Provincial Forests, Public Working Circles, and Sustained Yield Units are the governmental equivalent of the Tree Farm Licence with the timber, when it is ready for cutting, being disposed of by public auction. Management, silviculture, road-building and protection on such areas are the responsibility of the Forest Service. Other tenures of lesser importance are Tree Farms, Farm Woodlot Licences, and Timber Sales.

Protection of the forest, particularly from fire, is still a major problem although the public is becoming more cautious. Improved fire fighting techniques, the use of aircraft for patrol and transportation, employment of helicopters, and a gradually expanding system of lookouts were steadily cutting down fire losses until the disastrous 1958 fire season, which was the worst on record. Close liaison with the Science Service of the federal Department of Agriculture, which maintains laboratories in Vernon and Victoria, provides information about insect and fungal enemies of the forest.

Subsection 3.—The Pulp and Paper Research Institute of Canada*

The Pulp and Paper Research Institute of Canada is a centre of research and learning concerned with virtually every aspect of the production and use of pulp and paper products. It was established in 1913 as a branch of the Dominion Forest Products Laboratories and in 1927 was re-organized under the joint sponsorship of the Canadian Pulp and Paper Association, the Federal Government and McGill University. The Institute staff carries out applied research in the fields of woodlands operations and pulp and paper mill operations, and fundamental research in support of these fields. The graduate students work towards master's and doctorate degrees in physical chemistry, wood chemistry, chemical and mechanical engineering and postgraduate students are trained in fundamental research

* Prepared by Mr. Rielle Thomson, Information Manager, Canadian Pulp and Paper Association, Montreal, Que.

fields of interest to the pulp and paper industry. The Institute has, since 1927, occupied a building on the McGill campus erected by the pulp and paper industry and in 1958 a new building was completed at Pointe Claire on the western outskirts of Montreal by the Government of Canada in lieu of its annual financial grants. The building cost \$2,225,000 and houses Institute staff and facilities formerly located in temporary quarters. One wing contains laboratories typical of a college chemistry building, another wing contains laboratories for engineering research, and a third provides administrative offices. Facilities include laboratories for pulp and paper testing and for chemical, physical, radio-chemical, chemical engineering and mechanical engineering research including: hydraulics; a pilot plant for chemical pulping, pulp and chip refining, and waste liquor pyrolysis; a library on pulp and paper and related subjects; photographic and microscopic services; and a woodlands research department. At present the Institute has a permanent staff of about 160.

The Institute's research activities comprise a basic program, contract research, and technical services. The basic program is supported by assessments from the Maintaining Membership (some 40 companies, representing more than 100 mills and about 90 p.c. of the total production of the Canadian industry), by a basic grant from the Canadian Pulp and Paper Association, and by appropriations from McGill University (primarily for student work). It comprises research of interest to the industry broadly, as distinct from that which is the concern only of a single company or of a small segment of the industry.

The projects in the basic program range from studies of the growing seedling in the forest to the converted pulp and paper product. The emphasis, however, is primarily on fundamental and exploratory studies. The Institute is regarded as a centre for broad long-range and uninterrupted studies of basic principles which individual pulp and paper companies would find difficult to justify in terms of immediate applied objectives. Moreover, the Institute is a centre of highly specialized equipment and manpower which individual companies would not be in a position to keep occupied on a continuous basis.

In addition to its permanent staff, the Institute, in co-operation with McGill University, has some 25 graduate students working on fundamental projects in the background of pulp and paper technology, which also serve as their thesis topics. The head of the Institute's Wood Chemistry Division, who is also the E. B. Eddy Professor of Industrial and Cellulose Chemistry at McGill, directs graduate student work on such subjects as the behaviour of the materials of which wood is made—cellulose, lignin, resins, sugars, and other carbohydrates. The head of the Institute's Physical Chemistry Division, also a Research Associate in the McGill Chemistry Department, directs graduate student work in the physical chemistry of fibres, e.g., the forces which cause cellulose fibres in a water suspension to mat together to form paper. The head of the Institute's Chemical Engineering Division, also Associate Professor of Chemical Engineering at McGill, directs graduate students in such chemical and mechanical studies as the friction losses occurring when pulp flows through pipelines.

The Institute also undertakes contract research projects for individual companies or groups of companies in the pulp and paper or allied fields. The larger of these co-operative contracts have been concerned with problems of particular segments of the Canadian pulp and paper industry, such as the investigation into the causes of corrosion in alkaline pulping equipment, and the current project investigating the rapid deterioration of paper machine wires.

A further function of the Institute is to provide a broad range of technical information services to the industry and, to some extent, to other industries and the public. It maintains a specialized library for this purpose which supplies bibliographies, abstracts, translations, and critical reviews to the scientific staff and the industry.

In addition to its own program, the Institute co-operates with outside agencies in special projects. It maintains close liaison with the National Research Council and, in the past, has carried out joint projects with the Applied Chemistry Division and other Divisions of that organization. The researches it conducts fall generally into six broad classifications: mechanical pulping, chemical pulping, paper making, process control, waste utilization, and woodlands research.

Section 5.—Forest and Allied Industries

This Section is concerned with the many industries employed in the felling of timber in the forest and its transformation into the numerous utilitarian shapes and forms required in modern living. The basic industries provide the raw material for sawmills, pulp and paper mills and for a wide range of secondary industries that convert the products of the basic industries into more highly manufactured goods such as veneers and plywoods, sash and doors, furniture, and a vast range of industries using wood in any form in their processes. These industries, especially the pulp and paper industry and the lumber industry, contribute substantially to the value of the export trade of Canada and thereby provide the exchange necessary to pay for a large share of the imports purchased from other countries, particularly the United States.

Subsection 1.—Woods Operations

In connection with operations in the woods, the forests provide not only the raw materials for the sawmills, pulp mills, veneer mills, wood distillation, excelsior and other plants, but also the logs, pulpwood and bolts for export in the unmanufactured state, and fuel, poles, railway ties, posts and fence rails, mining timber, piling and other primary products that are finished in the woods ready for use or export. A number of minor forest products help swell the total, such as Christmas trees, cascara bark, balsam gum, resin, etc.

Estimates of woods operations attempt to give *actual* production figures for all items and are based chiefly on provincial Forest Service data for volume. Value, as presently estimated, excludes transportation costs, which formed a large part of the consumption values utilized in former calculations.

7.—Value of Woods Operations, by Product, 1952-56

¹ In estimating the annual drain on Canada's forest resources, certain converting factors have been used, each of which represents in cubic feet the quantity of merchantable wood used to produce one unit of the material in question. The factor for logs and bolts for the British Columbia coastal region is 175 and for the remainder of Canada 200. Other factors: pulpwood 85, fuelwood and wood for distillation 80, poles and piling 15, round mining timber 95, hewn railway ties 5, fence posts 1.2 and fence rails 1.

² Converted to rough cords and included with pulpwood.

³ Chiefly Christmas trees but also includes balsam gum, cascara bark, etc.

¹ Includes value of forest products other than wood.

Subsection 2.—The Lumber Industry

The manufacture of sawn lumber is the second most important industry in Canada depending on the forest for its raw materials.

The total number of sawmills, tie, shingle, lath, veneer, stave, heading and hoop mills and mills for cutting-up and barking or rossing of pulpwood, reports of which were compiled for 1956, was 6,629 as compared with 7,333 in 1955. Mills sawing less than 15,000 ft. b.m. are excluded but account for less than one-half of one per cent of the total lumber production. Employees numbered 57,078 and wages and salaries amounted to \$153,809,204. Logs, bolts and other materials and supplies of the industry were valued at \$350,745,728, the gross value of production was \$639,414,360 and net value \$279,710,804.

Lumber production in Canada reached its maximum in 1955 at 7,920,033,000 ft. b.m. decreasing to 7,739,603,000 ft. b.m. in 1956. Average value of lumber produced increased almost steadily from a low point in 1933 to 1951; decreases in the next three years of 2.8 p.c., 4.7 p.c. and 1.5 p.c., respectively, were followed by increases of 2.6 p.c. and 1.9 p.c. in 1955 and 1956.

Lumber Exports.—Exports of planks, boards and square timber are given in Chapter XXI on Foreign Trade.

Subsection 3.—The Pulp and Paper Industry

The manufacture of pulp and paper has been the leading industry in Canada for many years and the postwar development of the industry has more than kept pace with the vast industrial growth of the nation. Pulp and paper stands first among all industries in net value of shipments, in exports, in total wages paid and in capital invested. It is the largest consumer of electric energy and the largest industrial buyer of goods and services, including transportation, in the land. The industry has a newsprint output about four times that of any other country and provides over 50 p.c. of the world's newsprint needs. Canada is one of the world's greatest woodpulp exporters and stands second only to the United States as a producer of pulp.

There are three classes of mills in the industry. In 1957, 31 were making pulp only, 25 were making paper only and 72 were combined pulp and paper mills.

The industry includes several forms of industrial activity: operations in the woods with pulpwood as a product, the manufacture of pulp and paper of all kinds, and the manufacture of paperboards. Some of the important pulp companies operate sawmills

to utilize the larger timber on their limits to the best advantage, and some lumber manufacturers divert a portion of their spruce and balsam logs to pulp mills. Less than 13 p.c. of the pulpwood cut in Canada is exported in raw or unmanufactured form and a large portion of such exports is cut from private lands.

13.—Production, Consumption, Exports and Imports of Pulpwood, 1947-56

NOTE.—Table compiled on a new basis; figures not comparable with those published in the corresponding table of previous Year Books.

¹ Given in terms of rough or unpeeled wood.

² Newfoundland included from 1949.

Pulp Production.—The manufacture of pulp, the second stage in this industry, is carried on by mills producing pulp only and also by paper manufacturers operating pulp mills in conjunction with paper mills to provide their own raw material. Such mills usually manufacture a surplus of pulp for sale in Canada or for export. Spruce, supplemented by balsam fir in the east and by hemlock in the west, is the most suitable species for the production of all but the best classes of paper.

The preliminary preparation of pulpwood is frequently carried on at the pulp mill but there are also a number of cutting-up and rossing mills operating on an independent basis, chiefly for the purpose of saving freight on material cut at a distance from the mill or on material intended for export. Pulpwood is measured by the cord (4' by 4' by 8' of piled material). One cord of rough pulpwood contains approximately 85 cu. feet of solid wood, and one cord of peeled pulpwood 95 cu. feet.

Of the total 1957 pulp production, 86 p.c. was made in combined pulp and paper mills by companies manufacturing paper. The remainder was made for sale in Canada or for export by mills making pulp only. Over 53 p.c. was groundwood pulp and about 17 p.c. unbleached sulphite fibre, these being the principal components of newsprint paper. Bleached sulphite, bleached, semi-bleached and unbleached sulphate, soda fibre, semi-chemical, other grades and groundwood and chemical screenings made up the remainder. A considerable market has developed for screenings in connection with the manufacture of rigid insulating boards.

The manufacture of 10,425,295 tons of pulp produced in 1957 entailed the use of 13,367,088 cords of rough pulpwood valued at \$361,151,710 and the equivalent of 1,091,805 rough cords of other wood (i.e., sawmill chips, slabs and edgings, sawdust, butts, cores, etc.) valued at \$20,828,204. The total value of materials used in the manufacture of pulp was \$456,222,811.

¹ Includes production in British Columbia, Manitoba, New Brunswick, Nova Scotia and, from 1949, Newfoundland.

Pulp Exports.—The chief market for Canadian newsprint and pulp is the United States. Prior to World War II this market alone absorbed about 85 p.c. of the pulp exports and 80 p.c. of the newsprint exports. In 1945 the proportions were 76 p.c. and 83 p.c. respectively and in 1957, 81 p.c. and 85 p.c.

World Newsprint Statistics.—Since 1913 Canada has led the world in the export of newsprint. Figures for the leading producing countries for the two latest years available are given in Table 21; 1939 figures are included for comparative purposes. The six countries listed accounted for 73 p.c. of the estimated world production in 1957, Canada contributing about 45 p.c.

¹ Figures differ slightly from DBS figures given in Tables 18 and 20, because of different bases of calculation.

Statistics of the Combined Pulp and Paper Industries.*—The manufacture of pulp, the manufacture of paper and the manufacture of products made of paper may, under certain conditions, be treated as three industries for they are frequently carried on in separate plants by entirely independent companies. The manufacture of basic stock and the converting of this paper into stationery and other highly processed paper products are often combined in one plant. This conversion of paper within the pulp and paper industry represents only a small part of Canada's production of converted paper and boards, the bulk of which is still made in special converting mills classified in other industrial groups.

The presence of these different combinations in one mill makes it difficult to separate many of the statistics relating to the manufacture of pulp, basic paper and converted paper products. All converting operations carried on in paper mills in this industry are attributed to the particular industrial group of converting plants to which they properly belong. Including manufacturing operations as far as the basic paper-making stage, there were altogether 128 mills in operation in 1957. The employees numbered 65,940 and their salaries and wages amounted to \$307,627,849, as against \$297,571,944 the previous year. If the pulp made for their own use in combined pulp and paper mills is disregarded, the total value of materials and supplies used in the industry as a whole amounted to \$617,175,797 in 1957 compared with \$625,205,442 in 1956; the selling value of factory shipments to \$1,411,934,462 in 1957 and \$1,453,441,726 in 1956; and value added by manufacture to \$693,475,562 in 1957 and \$736,346,393 in 1956.

The pulp and paper industry is one of the leading single manufacturing industries in Canada. In 1957 as in 1956 it was first in selling value of factory shipments, in value added by manufacture, in employment and in salaries and wages paid. The manufacturing stages only of the industry are considered in these comparisons, no allowance being made for capital invested, men employed, wages paid or primary products sold in connection with the woods operations. These form an important part of the industry as a whole but cannot be separated from woods operations carried on in connection with sawmills and other industries. In world trade, pulp and paper are generally Canada's main commodities—newsprint alone, over a considerable period, has brought Canada more export dollars than wheat, nickel or any other single commodity.† The United States market absorbs annually over 80 p.c. of all pulpwood exports and over 80 p.c. of the pulp and the paper shipments of Canada.

Subsection 4.—The Veneer and Plywood Industries‡

The production of hardwood plywood in Canada is confined largely to the eastern provinces. Changes in manufacturing methods applied to hardwood plywood resulted in its adaptation to many uses, particularly to attractive wall finishes for homes and other buildings, flush doors, radio and television cabinets and other home and office furniture.

Softwood plywood is produced almost entirely in British Columbia. Douglas fir is most commonly utilized because of the availability of large diameter logs of this species from which large sheets of clear veneer can be obtained. The use of synthetic resin adhesives is responsible for this product that has become almost indispensable to the construction industry—for wall panels, concrete forms, roofing, sheeting and house sub-floors; for construction of silos, cribs and caissons; for box-car linings, bus bodies, trailers, power-driven and other types of watercraft; for box panels and crate linings, case goods and core-stock for furniture; for plywood-faced doors and for many other items.

The heating of glued veneers in moulds by high-frequency electric fields (dielectric heating) permits the manufacture of shaped plywood which is now being used for furniture, radio cabinets and similar products. The possibilities of this development are becoming more widely appreciated.

* See Chapter XIV for further particulars regarding the pulp and paper and paper-converting industries.

† For reasons given in Section I, Part II of the Foreign Trade Chapter, gold is excluded from Canadian trade statistics.

‡ Prepared by the Forest Products Laboratories, Forestry Branch, Department of Northern Affairs and National Resources, Ottawa.

Veneers of Canadian manufacture are not confined to species native to Canada. A number of imported woods of special decorative value are veneered successfully and provide the furniture industry with a wide choice of finishes. Exports of veneer and plywood produced in Canada increased in value from \$969,256 in 1938 to a high of \$30,103,676 in 1955, but declined to \$29,020,281 in 1956 and to \$22,335,667 in 1957.

Subsection 5.—The Wood-Using Industries

The wood-using group comprises thirteen industries,* other than sawmills and pulp mills, using wood as their principal raw material. Most of these industries obtain from the sawmills the wood they transform into planed and matched lumber, boxes, barrels, furniture, caskets and other manufactured or semi-manufactured products but the veneer and plywood and excelsior industries usually manufacture their products direct from logs and bolts.

This wood-using group does not include every industry into which wood enters as a raw material but only those producing commodities where the chief component is wood. There are a number of industrial groups in which wood is an important raw material as in the manufacture of agricultural implements, musical instruments, etc., and others such as the manufacture of machinery in which wood is necessary but only in comparatively small proportions.

Wood is used indirectly in the manufacture of all-metal products such as wooden patterns and wooden foundry boxes in making metal castings. Wood in the form of barrels, boxes and other containers also enters into the distribution of commodities of all kinds.

In 1957 the wood-using group, comprising 4,520 establishments, gave employment to 76,175 persons and paid out \$225,493,899 in salaries and wages. The gross value of its products was \$779,482,475 and the net value \$348,083,054.

* Furniture; sash, door and planing mills; veneer and plywood; hardwood flooring; boxes, baskets and crates; wood-turning; coffins and caskets; cooperage; woodenware; lasts, trees and wooden shoe findings; beekeepers' and poultrymen's supplies; excelsior; and other wood-using industries.

The importance of secondary industry in providing employment will be appreciated when it is noted that the number of employees in the wood-using group was more than 76,000, as compared with sawmills with approximately 51,000 employees and pulp and paper with about 66,000 in 1957.

Totals.....\$	205,535,641^r	247,810,786^r	273,494,141	246,623,490

Subsection 6.—The Paper-Using Industries

The paper-using group comprises three industries* engaged primarily in manufacturing commodities of paper and paperboard. Establishments engaged in printing, publishing, bookbinding and the allied graphic arts also consume large quantities of these materials but under the standard industrial classification adopted by the Dominion Bureau of Statistics in 1948 they are grouped separately.

Some paper-using establishments purchase paper as a raw material from the pulp and paper industry and merely subject it to some form of treatment to fit it for further manufacture in some other industry. This occurs in the manufacture of coated, sensitized or corrugated paper. Other firms purchase paper and subject it to some treatment to fit it for a definite final use such as in the manufacture of asphalt roofing or waxed wrapping paper. Another large group uses paper and paperboard as a raw material for conversion into paper bags, boxes, envelopes, laminated wallboard and other commodities.

The manufacture of containers and packages of various kinds has grown very rapidly since ways have been found of converting tough and cheap paper stocks into strongly made boxes which are replacing wooden crates and packing cases. Small attractive paper containers for use in the retail trade are growing in favour and constitute an important branch of the paper-using industries.

Composition roofing and sheathing, consisting of paper felt saturated with asphalt or tar and in some cases coated with a mineral surfacing, is being increasingly used as a substitute for metal roofing, wooden shingles and siding materials. Wood-fibre building boards, some of which are produced by lamination in the paper-using industries, are now used extensively in construction, especially for insulating purposes, replacing lumber and wood lath.

The growth of the paper-using industries in Canada since 1923 reflects these developments. In 1923 the 152 establishments in this group employed 6,870 persons, distributed \$7,442,102 in salaries and wages and produced goods valued at \$31,760,948. In 1957 these industries comprised 454 plants, provided employment for 28,343 persons whose earnings totalled \$95,658,442 and produced products worth \$453,784,723.

* Paper boxes and paper bags; roofing paper; miscellaneous paper goods.

Subsection 7.—Printing, Publishing and Allied Industries

The printing trades group is made up of five closely related industries: printing and publishing, comprised of publishers who operate printing plants; printing and bookbinding, including general or commercial printers and bookbinders; lithographing, comprised of plants specializing in that process; engraving, stereotyping and electrotyping, including photo-engraving; and trade composition or typesetting for printers. A sixth industry covering publishers of periodicals who do not print their own publications has been included since 1949. Although strictly speaking these publishers are not manufacturers, they are closely related to the printing trades which produce the plates, cuts, etc., and print newspapers, magazines, directories, yearbooks, almanacs, house organs and other periodicals for them.

In 1957 the manufacturing printing trades employed 68,248 persons whose earnings totalled \$259,128,560. Their output was valued at \$660,810,350 and the raw materials used and services received cost \$212,362,067.

Periodicals valued at \$270,206,914 accounted for about 40 p.c. of the value of printed matter and other products, daily newspapers alone contributing \$194,901,935. The value of periodicals is made up of \$201,637,619 received from advertising and \$68,569,295 received from subscriptions and sales of publications. In addition, the 1,623 publishers in the sixth industry reported revenues of \$47,937,549 from advertising and \$14,196,040 from sales of publications.

NOTE.—The interpretation of the symbols used in the tables throughout the Year Book will be found facing p. 1 of this volume.

Section 1.—Canada's Mineral Industry 1957-58*

Canada's mineral industry attained a record value of production in 1957. The total of \$2,190,322,392 represented a gain of \$105,400,000 over that of the previous year, though the increase was far less than those of other postwar years. In any event, 1957 brought many vital achievements. Important mineral discoveries were made, newly constructed rail lines linked several mining communities with civilization, advances in technology pointed the way to improved procedures in mining and milling and, generally speaking, the year was one of continued growth and development for the mineral industry. Nevertheless, trouble spots appeared as 1957 drew to a close. A substantial drop occurred in the demand for copper, lead and zinc, bringing severe declines in their market prices and forcing a number of base-metal mines to close and others to abandon development programs. In 1958 the United States, the industry's most important customer, imposed a 1.7-cent-a-pound duty on copper imports and severe quotas on imports of lead and zinc. For nickel, the era of premium prices came to an end and, by March 1958, the country's leading producer had cut back production. The petroleum industry also faced a marketing problem when the United States instituted oil import quotas on its west coast refineries. Asbestos miners were faced with a recession on one side of the Atlantic and stepped-up competition from producers abroad. As a result, the value of Canada's total mineral production for 1958 fell 3 p.c. behind that of the previous year.

However, despite its difficulties, the industry showed encouraging signs of strength. Uranium production, valued at \$45,700,000 in 1956, soared to \$136,000,000 in 1957 and to an estimated \$290,000,000 in 1958. Natural gas output expanded as pipelines brought the fuel to more Canadian communities. In fact, most companies looked ahead to better times. In northern Manitoba a major program was under way in 1957 and 1958 to bring new nickel mines into production. Dozens of companies were carrying out exploration

* The introduction and Subsection 1 of this Section were prepared under the direction of Dr. Marc Boyer, Deputy Minister of the Department of Mines and Technical Surveys, by John W. MacLeod of the Editorial and Information Division.

work in the Mattagami and Chibougamau areas of Quebec. In the Quebec-Labrador area Canadian and American interests were involved—to the extent of over \$700,000,000—in what will, in a decade or so, become the country's largest iron mining area. In Saskatchewan some 25 companies held land for development of rich potash deposits extending across the central part of the province; one mine was in production by the end of 1957.

While the short-term prospects for some minerals were still somewhat clouded at the end of 1958, most mining executives believed that the worst of the downturn was over; that whatever the next few years might bring, the long-range outlook remained as promising as ever; that a world bent on a high standard of living, industrial expansion and the conquest of outer space would, in the years ahead, require unprecedented quantities of metals, industrial minerals and fuels.

Subsection 1.—Metals*

In contrast with the spectacular gains of previous years, the value of Canada's metallic mineral production in 1957 levelled off at \$1,159,579,226 and in 1958 fell to an estimated \$1,142,140,007. The main cause of the decline was the drop in demand and market prices for base metals.

Nickel.—In 1957 there was an increase in the world supply of nickel, a rise in stocks held by both producers and consumers. Defence demands were reduced and the era of premium nickel prices came to an end. As a result, several companies abandoned development plans and by March 1958 The International Nickel Company of Canada Limited, the country's leading producer, had announced its first production cutback. Total 1957 production rose to 187,958 tons valued at \$258,977,309 compared with 178,515 tons at \$222,204,860 in the previous year. However, 1958 brought a marked decline in both volume and value, production for the year reaching 139,041 tons at \$196,733,985.

Ninety-five per cent of Canada's nickel production came from the Sudbury area of Ontario and the remainder from Manitoba and the Northwest Territories. In 1957, International Nickel operated at capacity for the eighth successive year, mining 16,000,000 tons of ore and increasing its nickel deliveries to 145,025 tons. But in March 1958 the company cut production by 10 p.c. and by July was operating at about two-thirds capacity. A development of major importance was the introduction by International Nickel of a new process for the recovery of nickel by the direct electrolysis of nickel matte. This method also permits recovery of cobalt high-purity sulphur and selenium.

For Falconbridge Nickel Mines Limited, whose seven Sudbury-area mines accounted for 2,005,439 tons of ore, 1957 was a record year and operations in 1958 were close to capacity. On the other hand, Nickel Rim Mines Limited, on the east rim of the Sudbury basin, shut down its mine in 1958 pending an increase in prices. The previous year it had milled 342,565 tons of nickel-copper ore bearing about 1,336 tons of nickel. Sherritt Gordon Mines Limited, with two producing nickel-copper mines and a concentrator at Lynn Lake, Man., and a refinery at Fort Saskatchewan, Alta., produced 10,033 tons of nickel in 1957 and continued to operate close to capacity the following year. North Rankin Nickel Mines began production of nickel-copper concentrate at Rankin Inlet, N.W.T., some 320 miles north of Churchill, Man., and in 1957 accounted for about 979 tons of nickel. Western Nickel Limited at Hope, B.C., constructed a mill and produced its first shipment of nickel concentrates early in 1958 but ceased operations when mining became uneconomical.

The most important exploration-development news in nickel in 1957-58 came from Manitoba, where International Nickel had under way a major program to bring its Thompson and Moak Lake mines into production by late 1960. A 30-mile railway spur was completed from the Canadian National Railways' Hudson Bay line to the town of Thompson in the autumn of 1957. In the Sudbury area of Ontario the company worked

* The figures for 1957 in this Subsection are final but those for 1958, as well as some pertaining to individual companies in both years, are subject to revision.

to bring its Crean Hill mine into production and began construction of a concentrator at Leveck but later curtailed both projects as the market weakened. In 1957, Falconbridge Nickel Mines carried out extensive pre-production development at its Onaping, Fecunis and Boundary mines in the Onaping area near Sudbury. The company put a new 2,000-ton mill into operation at Fecunis and early the following year blew in a new smelter. The Kenora area of Ontario also became the scene of considerable underground development work, but most of these operations were suspended before the end of the year.

Other areas of exploratory interest in 1957-58 included the Ungava area across northern Quebec, particularly the property of Raglan Nickel Mines Ltd.; the Coppermine River area of the Northwest Territories, where International Nickel and Sherritt Gordon undertook extensive diamond-drilling; and the Noranda district, where spasmodic drilling was carried out. New Manitoba Mining and Smelting Company Limited made considerable progress in the development of its property southwest of Cat Lake but was subsequently forced to discontinue the work.

Copper.—In 1957 and 1958 Canadian copper mining was hurt by declining prices. The world surplus that developed in 1956 continued to grow in 1957 and toward the end of the year producers were taking steps to curtail output. In fact, low prices forced a number of low-grade producers to suspend operations and by the end of 1958 the value of copper production had declined an estimated \$29,000,000 from that of the previous year. The market was further weakened by a 1.7-cent-a-pound duty imposed by the United States on its copper imports.

Canadian copper production in 1957 (359,109 tons) exceeded the record 1956 level* by 4,249 tons. In value, however, it dropped 29 p.c. to \$206,897,988 and in 1958 fell to approximately \$178,000,000. In 1957, International Nickel was the chief Canadian producer, Hudson Bay Mining and Smelting Co. Limited, was second and Noranda Mines Limited, third. The 323,590 tons of refined copper produced that year came from the two copper refineries, one operated by International Nickel at Copper Cliff, Ont., and the other by Canadian Copper Refiners Limited at Montreal East, Que., a subsidiary of Noranda Mines Limited.

Six smelters for the reduction of copper and copper-nickel were operated in Canada. Plants at Copper Cliff and Coniston in Ontario were used by International Nickel. The smelter of Noranda Mines Limited processed ores from the company's Horne mine and concentrates from most of Eastern Canada. Gaspé Copper Mines Limited, with a smelter at Murdochville, Que., treated ore concentrates from Tilt Cove, Nfld., as well as its own. Other plants were operated by Hudson Bay Mining and Smelting Co. Limited and Falconbridge Nickel Mines Limited.

Ontario produced 171,703 tons of copper in 1957, nearly all from the Sudbury area. International Nickel continued large-scale operations at its five producing Sudbury mines. Company deliveries of refined copper in 1957 amounted to 140,405 tons, or about 40 p.c. of Canadian mine production. In the same area Falconbridge Nickel Mines Limited, with six producing mines, produced 12,614 tons of copper and Nickel Rim 570 tons of concentrate. Two new copper-zinc producers came into operation during the year, both in the Manitouwadge area; Willroy Mines Limited commenced shipments from its 1,000-ton-a-day concentrator in July and Geco Mines Limited began producing at the rate of 1,800 ore tons a day in September.

Quebec's copper production fell from 122,300 tons in 1956 to 112,409 tons the following year, owing chiefly to reduced output at Gaspé Copper Mines and to the closing down of several smaller mines. The main producers were Noranda Mines whose Horne mine produced 25,968 tons of copper and Gaspé Copper at Murdochville producing 17,693 tons. Other Noranda-area producers in 1957 were Waite Amulet Mines Limited (9,939 tons), Lyndhurst Mining Company Limited (1,671 tons), Quemont Mining Corporation Limited (11,334 tons) and Normetal Mining Corporation Limited (8,168 tons). Producers in the Val d'Or area were East Sullivan Mines Limited (7,897 tons), Golden Manitou Mines Limited (2,788 tons), and Rainville Mines Limited (2,234 tons) which closed down in

March 1958. Campbell Chibougamau Mines Limited, on Merrill Island in Lake Chibougamau produced 13,883 tons of copper for the year ended June 30, 1957, and 5,636 tons during the last six months of the year. Other copper producers in the area were Opemiska Copper Mines (Quebec) Limited (8,555 tons), and Anacon Lead Mines Limited (942 tons). Elsewhere, Quebec Copper Corporation Limited in southeastern Quebec and Weedon Pyrite and Copper Corporation Limited south of Quebec City together produced some 4,000 tons of copper. (The former company closed its mine in April 1958.) Early in 1958 Merrill Island Mining Corporation, a copper-gold producer at Doré Lake, opened a 650-ton mill and Campbell Chibougamau opened its new Cedar Bay mine in the same area.

Hudson Bay Mining and Smelting Company, with a copper-zinc mine, concentrator and smelter at Flin Flon on the Manitoba-Saskatchewan boundary, produced 44,344 tons of copper in 1957. Sherritt Gordon Mines Limited, with two nickel-copper mines and a concentrator at Lynn Lake, Man., had an output of 4,748 tons.

Among British Columbia's producers in 1957 were The Granby Consolidated Mining, Smelting and Power Company Limited and Britannia Mining and Smelting Company Ltd., both of whose mines were later closed because of low prices. Several other properties in British Columbia also suspended operations.

Other copper producers in 1957 included: North Rankin Nickel Mines Limited, N.W.T., (265 tons), Buchans Mining Company, Nfld., (4,149 tons), and Maritimes Mining Corporation at Tilt Cove, Nfld. (3,142 tons). Early in the year Heath Steele Mines Limited, with a copper-lead-zinc property in New Brunswick, inaugurated a mine and plant rated at 1,500 tons of ore a day but a year later cut production by two-thirds.

Copper exploration and development were severely tempered in 1957 and 1958 by the uncertainty of the market. In British Columbia, Western Nickel Mines Limited opened a mill for nickel-copper concentrates early in 1958; Granduc Mines Limited continued to develop its property northwest of Stewart but, discouraged by low copper prices, stopped work early in 1958; and elsewhere in the province limited amounts of diamond-drilling were carried out. Hudson Bay Mining and Smelting Co. undertook development work at its Coronation mine in Saskatchewan and at its Chisel Lake and Stall Lake mines in Manitoba. Development work of interest also took place on nickel-copper properties at Thompson, Moak Lake, and Cat Lake, and in the Sudbury area (*see* Nickel). Most of the exploration interest in copper in 1957-58 centred about the Mattagami region of western Quebec where a number of promising finds were made including the copper orebodies of New Hosco Mines Limited and Kennco Explorations (Canada) Limited.

Lead and Zinc.—Canadian lead and zinc mining in 1957 and 1958 was seriously hampered by falling prices and by quotas imposed by the United States to hold its imports of lead and zinc to 80 p.c. of the 1953-57 average. In 1957 lead prices fell from 15½ cents a pound to 10½ cents; production dropped 4 p.c. in volume to 181,484 tons and 13.5 p.c. in value to \$50,670,407, with a further decline to \$42,095,560 in 1958. Zinc output in 1957 was 413,740 tons valued at \$100,042,533, a decline of 8,893 tons worth \$25,394,811 from the previous year. The estimated production for 1958 was 428,638 tons valued at \$93,100,167.

British Columbia's mines accounted for more than half of Canada's lead and zinc production in 1957-58. The principal producer was The Consolidated Mining and Smelting Company of Canada Limited (Cominco), operators of the Sullivan mine and 11,000-ton Kimberley mill, the Bluebell mine and 500-ton Slocan mill, the H.B. mine and 1,000-ton Salmo mill, and the Tulsequah mine and mill. Concentrates from all Cominco mines and those from other mines in British Columbia, Yukon and some foreign areas were treated in the company's smelter at Trail. In 1957 Cominco mined 3,273,613 tons of ore, about 378,000 tons less than the previous year, and by mid-year the declining base-metals market forced the company to close its Tulsequah mine and curtail its operations at the Sullivan open pit. By June 1958 Cominco had reduced its lead production rate about 20 p.c.

Other important British Columbia producers included Canadian Exploration Limited (35,000 tons of lead-zinc ore a month in 1957), Reeves MacDonald Mines Limited (405,531 tons for the year), Britannia Mining and Smelting Company Ltd. (849,212 tons of copper-zinc ore for the year), Sheep Creek Mines Limited (500 tons of lead-zinc ore a day), Yale Lead and Zinc Mines Limited (180 tons of lead-zinc-silver ore a day), ViolaMac Mines Limited (1,700 tons of ore a month) and Sunshine Lardeau Mines Ltd. (28,176 tons of lead-zinc-silver ore for the year). Of these, Britannia and Sunshine Lardeau closed early in 1958.

United Keno Hill Mines Limited was the most important producer in Yukon, having milled 159,885 tons during its fiscal year ended Sept. 30, 1957. Low lead-zinc prices forced Galkeno Mines Limited to close late in the year and its property and 220-ton mill were acquired by United Keno Hill.

In 1957 Hudson Bay Mining and Smelting Co. Limited, Canada's second largest zinc producer, mined about 1,377,571 tons of copper-zinc ore from its Flin Flon property on the Manitoba-Saskatchewan boundary and 73,346 tons from its Schist Lake mine a few miles to the southeast. In 1958 the electrolytic zinc plant at Flin Flon, which processes ores from all company properties, continued to operate close to rated capacity of 190 tons a day.

In Ontario, zinc concentrates were produced mainly by Geco Mines Limited and Wilroy Mines Limited, both of which came into production late in 1957. Their zinc output in 1958 was approximately 45,200 tons.

In Quebec, low zinc prices in 1957 forced Barvue Mines Limited in Abitibi East to close its mine and others to curtail production. The principal sources of zinc concentrates were mines of the Noranda-Val d'Or district whose 1957 production of the metal was: Quemont Mining Corporation Limited, 16,190 tons; Normetal Mining Corporation Limited, 15,987 tons; Golden Manitou Mines Limited, 18,618 tons; Waite Amulet Mines Limited, 8,384 tons; and West MacDonald Mines Ltd., 14,500 tons. East Sullivan Mines Limited, which milled 905,241 tons of copper-zinc ore in 1957, closed its zinc circuit in February of the following year. Quebec's main lead producer was New Calumet Mines Limited, on Calumet Island, which in 1957 mined 142,324 tons of zinc-lead-silver ore containing about 1,979 tons of lead. Minor amounts were produced by Golden Manitou and Barvue Mines.

In New Brunswick, Heath Steele Mines Limited, 32 miles northwest of Newcastle, opened a 1,500-ton mill in February 1957 and produced zinc, lead and copper concentrates until March 1958, when low prices forced it to close.

Buchans Mining Company Limited, of Newfoundland, Canada's second largest source of lead in 1957, produced concentrates containing 26,584 tons of lead and 37,716 tons of zinc, a level it maintained in 1958.

One of the main development projects in 1957 and 1958 took place at the Snow Lake deposits of Hudson Bay Mining and Smelting Co. Limited, 70 miles east of Flin Flon. This included sinking a shaft at Chisel Lake, constructing a transmission line and starting work on a 50-mile railroad. Production is scheduled to begin in 1960. Meanwhile, the company continued to develop its Coronation mine 13 miles southwest of Flin Flon. Many projects begun in 1957 were deferred until prices improved. Consolidated Sudbury Basin Mines Limited brought its zinc-copper-lead deposits 15 miles northwest of Sudbury to the production stage but went no further. Brunswick Mining and Smelting Corporation Limited carried on with pilot-mill testing of its zinc-lead-copper ores 12 miles southwest of Bathurst and continued to develop its No. 12 mine and work out plans for mill, smelter and railway facilities; but the project ground to a halt as base-metal prices fell. Elsewhere in New Brunswick spasmodic diamond-drilling and geological mapping were carried out but, for the most part, the price decline caused development programs to be sharply curtailed.

In Quebec, the six-company Mattagami Syndicate diamond-drilled an aerial electromagnetic anomaly near Watson Lake, 100 miles north of Senneterre, and outlined a large deposit bearing mainly zinc and copper values (*see Copper*).

Iron Ore.—In 1957, a slackening in United States steel production and a 15-p.c. gain in ore stocks on both sides of the international border caused a levelling-off in Canadian shipments of iron ore. By the end of 1958, production had declined some \$46,000,000 from the previous year, though prospects for the future looked brighter as the United States steel industry began to recover.

Production in 1957 fell slightly from that of 1956 to 22,272,174 short tons valued at \$167,221,425, and in 1958 to 15,878,481 short tons at \$121,437,285. Quebec, the leading producer (8,872,948 short tons of iron ore at \$65,805,057) registered an increase both in production volume and in value in 1957. Newfoundland's production (8,174,779 short tons at \$57,898,102) levelled off slightly and Ontario's (4,867,105 short tons at \$41,317,629) showed a decline. Preliminary figures for 1958 show further declines in all three provinces.

In 1957, Iron Ore Company of Canada, based at Schefferville, Que., and operating in Newfoundland (Labrador) and New Quebec, shipped 12,435,712 long tons (2,240 lb.) of direct-shipping ore. Noranda Mines Limited, with mines in Quebec's Noranda area and a sinter plant at Port Robinson, Ont., accounted for 40,952 long tons of iron-oxide sinter. And Quebec Iron and Titanium Corporation, with a mine at Allard Lake and a smelter at Sorel, shipped 167,437 long tons of remelt iron. In 1957, Dominion Wabana Ore Limited, Bell Island, Nfld., sent out 2,879,019 long tons of heavy-media concentrates.

Ontario's iron ore output in 1957 was 691,098 short tons or \$2,859,617 below the 1956 level. Producers were: Marmoraton Mining Company Limited, Marmora (452,710 long tons of pelletized magnetite concentrate); Clarken Development Limited, 16 miles west of Millbridge Station in Hastings county (41 long tons of magnetite concentrate); Algoma Ore Properties Limited, mines and sinter plant near Jamestown (1,600,630 long tons of iron-oxide sinter); Steep Rock Iron Mines Limited, Steep Rock Lake near Atikokan (2,370,770 long tons of direct-shipping ore); and The International Nickel Company of Canada Limited, with mines in the Sudbury area and plant at Copper Cliff (113,099 long tons of iron-oxide pellets).

The volume of production in British Columbia dropped by 12,612 short tons in 1957 to 357,342, but the value increased by \$9,790 to \$2,200,637. Producers, whose shipments consisted of magnetite concentrate, were: Texada Mines Limited, Texada Island (178,572 long tons); Argonaut Mine Division of Utah Company of the Americas, Quinsam Lake, Vancouver Island (70,929 long tons); and Empire Development Company Limited, Elk River deposit, near the north end of Vancouver Island (an estimated 75,000 long tons).

Despite the uncertainty of the market, the exploration and development of iron-bearing properties in 1957-58 remained at a healthy level—especially in Quebec-Labrador. Iron Ore Company of Canada gave particular attention to the Wabush Lake area, where its holdings were estimated at over 1,000,000,000 tons of concentrating-grade ore. In the same area Wabush Iron Company Limited carried out preliminary surveys and late in 1958 accepted contracts for the construction of a 42-mile railway.

Quebec Cartier Mining Company made definite plans to mine its Lac Jeannine deposit where a specularite-bearing iron formation will provide some 20,000,000 tons of iron ore annually. In 1957 the company completed 160 miles of a truck-access road northward from Shelter Bay to its Mount Reed property and the following year called for bids for the construction of a 187-mile railroad from Shelter Bay, a hydro-electric power dam and other surface facilities. The company, along with others, continued to investigate claims in the Mount Reed and Mount Wright areas a few miles north and east of Lac Jeannine.

At Hopes Advance Bay in the Ungava Bay area, Ungava Iron Ores Company carried out extensive drilling and mapping. Plans called for three producing mines, with production scheduled for 1963. Near Shawville, Que., the Hilton mines made their first shipment of high-grade iron-oxide pellets early in 1958 and later opened a beneficiating plant rated at 600,000 tons a year. Other areas of active exploratory interest in Quebec included Montgolfier township, 60 miles north of Taschereau; Albanel Lake, 100 miles northeast of Chibougamau; and an area 35 miles inland from Hudson Bay. In the autumn of 1958,

a sharp reduction in the demand for titanium-rich slag forced Quebec Iron and Titanium Corporation to suspend smelting operations at Sorel. The company had completed its sixth electric furnace the year before and had two more under construction.

Developments in Ontario in 1957-58 centred mainly around the Michipicoten and Steep Rock Lake areas. Algoma Ore Properties Limited began producing siderite ore from the Sir James open-pit mine and continued the underground development at its Helen and Victoria mines. Steep Rock Iron Mines completed a new concentration plant (with another to be ready early in 1959) and continued to develop the new Hogarth underground mine and the "G" open pit. Caland Ore Company Limited carried on its dredging of the east arm of Steep Rock Lake. In the same area Canadian Charleson Limited began construction of a gravity separation plant for treating hematite-bearing gravels and by October 1958 had made its first shipment. Annual capacity was rated at 250,000 tons of iron-ore concentrate. In November 1957, Anaconda Iron Ore Company Ltd. was formed to purchase the iron ore claims of Lake Superior Iron Limited and others about 32 miles north of Nakina.

In British Columbia, 1957-58 brought a legal battle over the province's Mineral Property Taxation Act, passed in October 1957. The ruling, which would impose a tax of 50 cents a ton on shipments of iron ore, was successfully appealed in the Supreme Court of British Columbia but was to be considered again before the province's Court of Appeals. Several companies took an interest in British Columbia's iron in the two-year period. Among them, The Consolidated Mining and Smelting Company of Canada Limited studied the possibility of producing pig iron and steel from pyrrhotite tailings at its Kimberley concentrator, and Nimpkish Iron Mines Limited was incorporated as a private company to operate an iron property on Vancouver Island.

Gold.—For the gold mining industry, 1957 was a year of rising costs and reduced earnings. The premium on the Canadian dollar in relation to that of the United States continued to reduce the mint price of gold, which by August reached a low of \$33.06 per oz.t. Thus the value of Canada's gold production for the year fell to \$148,757,143 though the volume (4,433,894 oz.t.) was actually greater than that of 1956. Earnings for 1958, however, showed a slight improvement (4,534,455 oz.t. at \$154,065,491) and prospects for the future—attributed in no small measure to the Emergency Gold Mining Assistance Act—appeared somewhat brighter.

Almost 60 p.c. of Canada's gold comes from Ontario, where the 1957 output of 2,578,206 oz. t. valued at \$86,498,811 was 64,294 oz. t. higher than the 1956 level. Increases occurred mainly in the Larder Lake, Patricia and Thunder Bay districts with declines in Porcupine, Kirkland Lake, Sudbury and Matachewan. In 1958 all Ontario's gold mining areas except Sudbury showed production gains. The Porcupine district in 1957 had 13 auriferous-quartz mines in operation, of which Hollinger Consolidated Gold Mines Limited, McIntyre Porcupine Mines Limited and Dome Mines Limited were the three leading producers. Aunor Gold Mines Limited and the Hollinger-Ross mine at Holtre maintained production at about the level of the previous year while decreases of varying degrees were shown at Preston East Dome Mines Limited, Broulan Reef Mines Limited and the adjoining Hugh-Pam Porcupine Mines Limited, Pamour Porcupine Mines Limited, Coniaurum Mines Ltd., Delnite Mines Limited, Hallnor Mines Limited and Paymaster Consolidated Mines Limited.

Kerr-Addison Gold Mines Limited, Canada's largest gold producer, which operates in the Larder Lake district, increased its output by 44,000 oz. t. or by 9 p.c. In the Patricia area, the chief producers of 1957 were Campbell Red Lake Mines Limited and Madsen Red Lake Gold Mines Limited, both of which showed improved annual output along with New Dickenson Mines Limited, Cochenour Willans Gold Mines Limited and Pickle Crow Gold Mines Limited. On the other hand, Kirkland Lake's production continued downward, output from the seven gold mines in the district dropping by 3 p.c. Producers in 1957 were Lake Shore Mines Limited, Wright-Hargreaves Mines Limited, Macassa Mines

Limited, Kirkland Minerals Corporation Limited, Sylvanite Gold Mines Limited, The Teek-Hughes Gold Mines Limited and Upper Canada Mines Limited. In the Thunder Bay district both MacLeod-Cockshutt Gold Mines Limited, the chief producer, and Leitch Gold Mines Limited increased milled tonnage slightly.

Quebec's 1957 output declined by 29,164 oz. t. to 1,006,895 oz. t. valued at \$33,781,327. Only 11 auriferous-quartz mines were producing. In the Cadillac-Malartic district, the province's main gold-producing area, East Malartic Mines Limited registered an increase in output of 21 p.c. and Canadian Malartic Gold Mines Limited increased its production 15 p.c. With the closing of Sullivan Consolidated Mines Limited, however, the Bourlamaque-Louvicourt district had a 6-p.c. decrease but Lamaque Gold Mines Limited, Quebec's largest gold mine, increased production by approximately 3 p.c., and Bevecon Mines Limited by 17 p.c. In Noranda-Duparquet-Belleterre, Eldrich Mines Limited shipped 8,600 tons of gold ore a month to the smelter of Noranda Mines Limited for use as flux. Elder Mines Limited also shipped to Noranda for the same purpose. Gold from Quebec's base-metal mines in 1957 decreased 1,352 oz. t. to 406,545. The following year Sullivan Consolidated Mines Limited was reopened and production for the entire province rose 5.4 p.c.

Northwest Territories production in 1957 fell 12,651 oz. t. to 340,018 (valued at \$11,407,604) and finally to 335,720 oz. t. in 1958. The chief producers were: Giant Yellowknife Gold Mines Limited and the Con and Rycon mines of The Consolidated Mining and Smelting Company of Canada Limited, whose 1957 production eased slightly, and Consolidated Discovery Yellowknife Mines Limited, which that year had a 12-p.c. increase and the greatest gold production in its history.

In 1957 British Columbia, reversing a downward trend under way since 1948, showed an increase of more than 32,421 oz. t. over its 1956 output. This was a reflection of a 41-p.c. increase at Bralorne Mines Limited, the province's leading gold mine. The other producers were Pioneer Gold Mines of B.C. Limited in the Bridge River area and The Cariboo Gold Quartz Mining Company Limited in the Wells area. The 1958 output of the province was slightly lower.

Manitoba's production dropped by 224 oz. t. to 120,008 oz. t. valued at \$4,026,268. Output from the mine of Nor-Acme Gold Mines Limited at Snow Lake, the main auriferous-quartz source, held at the level of the previous year but in 1958 the mine was forced to close. Minor amounts (totalling less than \$6,000,000 in 1957) of gold are produced, largely as a by-product of base-metal mining, in Yukon, Saskatchewan, Alberta, Newfoundland and Nova Scotia.

Exploration and development work lagged somewhat in 1957 with no new mines coming into production, but interest rose noticeably in 1958 partly owing to the prospects of increased returns under the Emergency Gold Mining Assistance Act. Government financial assistance to gold mines facing abnormally high operating costs was extended to the end of 1960 and increased by 25 p.c. Some of the programs under way are mentioned below.

In Ontario's Porcupine district, Broulan Reef Mines Limited continued a major development program at depth; Delnite Mines Limited were opening three new levels and Aunor Gold Mines Limited increased its mill rate and were working on a new block of levels between 2,125 and 2,900 feet. In the Kirkland Lake camp, Wright-Hargreaves completed the sinking of its No. 6 shaft and was developing six new levels; and Upper Canada Mines Limited were shaft-sinking to the 4,825-foot horizon to provide eight new levels. In the Red Lake district, Robin Red Lake Mines Limited undertook a drilling program and New Dickenson Mines Limited deepened its shaft to open four additional levels.

In Quebec, Canadian Malartic Gold Mines Limited and Barnat Mines Ltd. carried out diamond-drilling programs, the latter reporting the discovery of an important ore zone at its 900-foot level. Other development work was undertaken by East Malartic Mines Limited, Sigma Mines (Quebec) Limited, Malartic Gold Fields Limited and Norlartic Mines Limited.

Bralorne Mines Limited, in the Bridge River area of British Columbia, pushed development of the 77 and 79 veins at depth, and The Cariboo Gold Quartz Mining Company Limited and Tofino Mines Limited also undertook development work.

In the Northwest Territories, Giant Yellowknife Gold Mines Limited, the principal producers, were installing a new roaster unit and baghouse to improve recovery of precious metals and planning to deepen the central shaft and increase the mill rate. The Consolidated Mining and Smelting Company planned to deepen the winze at the Con mine and were working new claims to the north of the Rycon mine. Consolidated Discovery Yellowknife Mines Limited began shaft-sinking, with four new levels to be developed, and Akaitcho Yellowknife Gold Mines Ltd. undertook a mapping and diamond-drilling program.

Silver.—About 60 p.c. of Canada's silver production is derived from lead-zinc and silver-lead-zinc ores, most of which are mined in British Columbia and Yukon. Fine silver is produced by The Consolidated Mining and Smelting Company of Canada Limited at Trail, B.C., from the refining of lead and zinc ores; by Canadian Copper Refiners Limited, Montreal East, Que., in refining blister copper; by Deloro Smelting and Refining Co. Ltd., Deloro, Ont., from the refining of silver-cobalt ores; by The International Nickel Company of Canada Limited, Copper Cliff, Ont., from the refining of nickel-copper ores; and by Hollinger Consolidated Gold Mines, Limited, Timmins, Ont., and the Royal Canadian Mint, Ottawa, Ont., in refining gold bullion.

Cutbacks at base-metal mines, the source of most of Canada's silver, tended to hold back production in 1957, but their effects were offset by the opening of new mines in Ontario and New Brunswick. The year's output of 28,823,298 oz. t. valued at \$25,182,915 remained close to the 1956 level. In 1958, however, there was a sharp improvement as production rose to 31,311,378 oz. t. valued at \$27,200,192.

In Yukon's Mayo district, Canada's largest single source of silver, United Keno Hill Mines Limited produced about 5,694,850 oz.t. in the fiscal year ended Sept. 30, 1957, derived mostly from the Hector and Calumet mines. Milling at Galkeno Mines Limited, a neighbouring property, was suspended late in the year as the market for base metals fell.

Of mines operated by The Consolidated Mining and Smelting Company of Canada Limited, the Sullivan at Kimberley, B.C., is the principal producer of silver. The company's silver recovery from its own ores and those of custom shippers amounted to 10,877,532 oz.t. in 1957. Other British Columbia producers were Torbrit Silver Mines Limited near Alice Arm; Highland-Bell Limited at Beavertell; Silver Standard Mines Limited, near Hazelton; ViolaMac Mines Limited, in the Slocan district; Sunshine Lardeau Mines Ltd., at Camborne; Western Exploration Co. Ltd., at Silvertown; Yale Lead and Zinc Mines Limited, at Ainsworth; and Sheep Creek Mines Limited, near Invermere. Giant Mascot Mines Limited, near Spillimacheen, ceased operations in June when their Silver Giant lead-zinc deposit was mined out. Some silver was obtained from two large copper producers—The Granby Consolidated Mining, Smelting and Power Company Limited, near Princeton (closed in April 1957 when the ore was exhausted), and Britannia Mining and Smelting Company Ltd. (closed in March 1958 because of low copper and zinc prices).

About 65 p.c. of Ontario's silver output comes from mines of the Cobalt-Gowganda area. The principal producers—Siscoe Metals of Ontario Limited, Silver-Miller Mines Limited, Castle-Trethewey Mines Limited, Langis Silver and Cobalt Mining Company Limited, Nipissing-O'Brien Mines Limited, and Cobalt Consolidated Mining Corporation Limited—ship their ores mainly to the refinery of Deloro Smelting and Refining Co. Ltd. At Copper Cliff, International Nickel recovered 1,450,000 oz. t. of silver in 1957 as a by-product in the treatment of nickel-copper ores. At Manitouwadge, Geco Mines Limited and Willroy Mines Limited, two new copper-zinc producers, went into operation late in the year. Other sources of silver were Jardun Mines Limited, near Sault Ste. Marie, Falconbridge Nickel Mines Limited, Coldstream Copper Mines Limited and numerous lode-gold mines.

Quebec's output of silver comes mainly from its copper ores. The principal producers in 1957 were Noranda Mines Limited, Golden Manitou Mines Limited, Normetal Mining Corporation Limited, Quemont Mining Corporation Limited, Barvue Mines Limited, New Calumet Mines Limited, Gaspé Copper Mines Ltd., East Sullivan Mines Limited, Waite Amulet Mines Limited, Campbell Chibougamau Mines Ltd. and Opemiska Copper Mines (Quebec) Limited.

Heath Steele Mines Limited, the only producer in New Brunswick, recovered silver from its base-metal operations but was forced to curtail its operations sharply in 1958. Buchans Mining Company Limited of Newfoundland also obtained silver from base-metal concentrates.

Development work involving silver values has been mentioned under the headings of Copper and Lead and Zinc. Projects of interest in 1957 and 1958 involved the Chisel Lake area, under development by Hudson Bay Mining and Smelting Co. Limited; the base-metal property of Consolidated Sudbury Basin Mines Limited; the zinc-silver-lead deposit of The Coniagas Mines Limited at Bachelor Lake, Que.; the drilling program undertaken by the Mattagami Syndicate at Watson Lake; and the zinc-lead-copper deposits near Bathurst which, for a time, were under study by Brunswick Mining and Smelting Corporation Limited, and by Nigadoo Mines Limited. Unfortunately the continuing slump in the base-metals market has forced some of these projects to be curtailed.

Uranium.—Uranium production registered spectacular gains in 1957-58. Annual output of the oxide soared from 2,281 tons at \$45,732,145 in 1956 to 6,635 tons at \$136,304,364 the following year; and preliminary figures for 1958 of 14,118 tons at \$290,228,356 show a continuation of the upward trend.

Ontario was the leading producer, its 1957 output of 3,985 tons accounting for about 60 p.c. of the Canadian total. During the year the two established Elliot Lake producers, Pronto Uranium Mines Limited and the Quirke Lake mine of Algom Uranium Mines Limited, operated at full capacity and were joined by five new mines. Coming into operation were Algom's Nordic mine, Consolidated Denison Mines Limited, the Buckles mine of Lake Nordic Mines Limited and Can-Met Explorations Limited. By the end of 1958 another five Elliot Lake mines reached the production stage: Northspan's Panel and Spanish American mines and those of Stanleigh Uranium Mining Corporation Limited, Milliken Lake Uranium Mines Limited and Stanrock Uranium Mines Limited. Thus Elliot Lake, capable of supplying some 13,000 tons a year, became the largest uranium-producing camp in the world.

In the Bancroft district, Bicroft Uranium Mines Limited was the only producer at the beginning of 1957 but was later joined by Faraday Uranium Mines Limited and Greyhawk Uranium Mines Limited, and in June 1958 by Canadian Dyno Mines Limited, bringing the total to four mines and three mills.

Saskatchewan's 1957 production of 2,231 tons valued at \$44,561,832 came from seven mines on the north shore of Lake Athabasca. Eldorado Mining and Refining Limited, Rix Athabasca Uranium Mines Limited, National Explorations Limited and Gunnar Mines Limited had been in production for several years; the others were Lorado Uranium Mines Limited (which opened a custom mill in August 1957), Cayzor Athabasca Mines Limited and Lake Cinch Mines Limited. In 1958 the area's three mills worked close to or beyond capacity. Eldorado's mill operated at 1,950 tons a day, Gunnar's at 2,000 and Lorado's at 600 tons a day.

Production of uranium oxide in the Northwest Territories in 1957 amounted to 419 tons. Eldorado Mining and Refining Limited continued to produce a precipitate and concentrate at its Port Radium mine, sending them to the company's refinery at Port Hope, Ont. In mid-1957 Rayrock Mines Limited began producing precipitate at its mine on Sherman Lake and operated a mill rated at about 150 tons a day.

In May 1958 Canada and the United States announced that surplus uranium stocks could be sold by mines to countries such as West Germany and Switzerland where bilateral agreements had been completed (ensuring that the uranium would be used only in peaceful projects). It is of technological interest that, during the year, uranium metal was produced for the first time in Canada by Eldorado Mining and Refining Limited.

Platinum.—Canada is also a leading producer of platinum metals. These occur in small amounts in the nickel-copper ores of Ontario's Sudbury district and are recovered in unrefined form from smelting and refining operations. International Nickel is the chief producer, recovering the metals at the company's refinery near London, England. Falconbridge Nickel Mines Limited, also operating nickel-copper mines near Sudbury, refines platinum metals at Kristiansand, Norway. Output of platinum in 1957 was at a postwar high of 199,565 oz.t. valued at \$17,835,124 and output of palladium, rhodium, iridium, ruthenium and osmium amounted to 216,582 oz.t. at \$7,896,209.

Titanium.—Canada's titanium industry is based almost entirely on the production of titanium-dioxide slag, the raw material used in the manufacture of pigments. The sole producer is Quebec Iron and Titanium Corporation, which, at Allard Lake, mined record quantities of ilmenite (an iron-titanium oxide) and, at Sorel, reached a new high in the production of slag. The company expanded its facilities considerably in 1957 but the following year was forced to curtail operations as the demand for titanium-dioxide pigments eased.

Cobalt and Tungsten.—Cobalt is found in the ores of the Sudbury area and is recovered by International Nickel and Falconbridge Nickel Mines Limited in the form of cobalt oxide or electrolytic cobalt. Other producers include Deloro Smelting and Refining Co. Ltd., which in 1957 processed ores from the Cobalt-Gowganda area of Ontario, and Sheritt Gordon Mines Limited, Fort Saskatchewan, Alta. Canadian production in 1957 reached a record 3,922,649 lb. valued at \$7,784,423.

Canadian production of tungsten in 1957 came from Salmo, B.C., where it was mined in the form of the oxide, scheelite. Shipments in 1957 totalled 1,921,483 lb., worth \$5,279,275, but were considerably lower in 1958 when demand for the metal slackened.

Selenium, Molybdenum and Magnesium.—Selenium is derived from the refining of blister copper by Canadian Copper Refiners Limited at Montreal, operating the largest selenium metal-and-salts plant in the world, and by International Nickel at Copper Cliff, Ont. Production in 1957 totalled 321,392 lb. valued at \$3,535,312.

Molybdenite Corporation of Canada Ltd., with a mine about 25 miles northwest of Val d'Or, Que., remained the sole producer of molybdenum in 1957. Shipments amounted to 783,739 lb. at \$1,166,557.

Canadian magnesium is produced by two companies from the minerals dolomite and brucite—Dominion Magnesium Limited mines a dolomitic limestone at Haley, Ont., and Magnesium Company of Canada Limited mines a brucite limestone at Wakefield, Que. Production for 1957 came to approximately 16,770,371 lb. valued at \$5,254,896.

Canada also produces small quantities of antimony, bismuth, cadmium, calcium, indium, tellurium and tin, largely as by-products in the refining of base metals.

Subsection 2.—Industrial Minerals*

Despite the recession in industrial activity and a number of labour strikes that affected production, the total dollar value of industrial minerals produced in Canada reached an all-time high of \$472,281,000 in 1958. Among the minerals and mineral products that reached new highs in tonnage or in value, or both, were salt, pyrite and pyrrhotite, nepheline syenite, sodium sulphate, sulphur, clay products, cement, lime, sand and gravel, and stone.

* Prepared under the direction of Dr. Marc Boyer, Deputy Minister of the Department of Mines and Technical Surveys, by M. F. Goudge, Chief of the Industrial Minerals Division, Mines Branch.

An event of outstanding importance was the initial production of potash from the vast deposits of Saskatchewan. Elemental sulphur was also produced in greatly increased amount and is now available in quantity for export. By the development of these basic resources Canada's production base is broadened and the country's position strengthened both in export markets and in the domestic manufacturing industries.

Potash.—An event of international importance was the initial production of potash in Saskatchewan late in 1958 by Potash Company of America Limited from its property at Patience Lake, 14 miles east of Saskatoon. Another company—International Minerals and Chemical Corporation (Canada) Limited—is sinking a shaft to the potash beds near Esterhazy in southeastern Saskatchewan and expects to be in production in 1960.

Potash Company of America reached the potash bed at a depth of 3,330 feet and found the character and quality of the potash to be equal to that indicated by core drilling. No difficulty is being experienced in the mining operations. The first potash has been successfully milled and operations are to be steadily increased until the output of fertilizer-grade material reaches 600,000 tons annually.

This development culminates years of investigation that began shortly after Imperial Oil Limited first reported the discovery of potash in 1943 during exploratory drilling for petroleum. A Canadian company—Western Potash Limited (now Continental Potash Corporation Limited)—was the first to start shaft sinking but, after reaching a depth of 1,675 feet in April 1958, work was stopped for lack of funds. The total amount being expended by the two other companies is expected to be between \$50,000,000 and \$60,000,000.

Commercial production of potash is being obtained at only two other places on this Continent—at Carlsbad, New Mexico, from bedded deposits, and at Searles Lake, California, from brine. The Carlsbad deposits, which have been the Continent's main source of potash, are approaching depletion and most of the major operating companies there have acquired properties along the Saskatchewan potash belt, now believed to be the largest and the richest source of potash in the world.

The deposits occur near the top of a great bed of rock salt of Devonian age that underlies most of the prairies. The potash is at depths of from 2,550 to 7,000 feet, but is nearest the surface (2,550 to 3,500 feet) along a belt 35 to 50 miles wide and nearly 400 miles long that extends diagonally across Saskatchewan from the Manitoba border north of Moosomin, to the Alberta border near Manito Lake. Potash of economic grade is not known to extend into Alberta but it does extend for at least 15 miles into Manitoba. The predominant potash mineral is sylvite (KCl) but in the vicinity of the Quill Lakes some beds of carnallite, the double salt of potassium and magnesium, over 30 feet thick have been found. Beds of intermixed sylvite and rock salt (referred to as sylvinite) over 10 feet thick and containing the equivalent of more than 25 p.c. of K_2O are common, and some beds containing the equivalent of 40 p.c. of K_2O are reported. The thickness and richness of the potash beds exceeds anything known elsewhere.

As a result of exploration and the data obtained from about 200 drilled wells, most of the activities of the 17 companies at present investigating the potash belt are concentrated in two main areas. The first of these extends from west of Saskatoon to the Quill Lakes. In this area Potash Company of America Limited is producing. The second area is south of Yorkton in the eastern part of the province. Near Esterhazy in this district, International Minerals and Chemical Corporation (Canada) Limited is sinking a shaft to the deposits which here are 3,000 feet beneath the surface. To these two main areas of activity may be added a third near Unity where Continental Potash Corporation Limited has holdings.

In an attempt to do away with the necessity of sinking a shaft costing from \$3,000,000 to \$4,000,000 through soft, crumbling and wet sedimentary rocks, one company is experimenting with a method of recovering the potash by a solution method. This method, if successfully worked out, would cheapen the cost of the potash and enable recovery to be made from the more deeply buried beds not considered of economic interest at the present time.

As results of exploratory drill holes become available, the estimates of the tonnage of high-grade potash that can be economically extracted are continually being raised. The most recent estimate is about 6,500,000,000 tons and this includes only material that is in beds 5 to 10 feet thick, grades 25 p.c. K_2O equivalent or better, and is recoverable by room-and-pillar mining which leaves 60 p.c. of the potash in the pillars. If a grade of 20 p.c. K_2O or better is considered, the estimate is increased to 8,000,000,000 tons, and if the deeply buried material is taken into account the estimates enter the realm of fantasy. It would seem that the availability of the Saskatchewan deposits has forever allayed any fear of a shortage of this indispensable mineral.

Sulphur.—Preliminary statistics indicate that in 1958 for the fourth year in succession a new record was set for production of sulphur in all forms in Canada. Production in that year amounted to 950,000 tons compared with 918,727 tons in the previous year.

The recent increase in plant capacity to produce elemental sulphur has been outstanding and production plans for the immediate future will make Canada one of the world's major producers. There are now 10 plants producing this all-important industrial raw material—one in British Columbia, four in Alberta, one in Saskatchewan, three in Ontario, and one in Quebec. The plants in Western Canada, where the greatest potential production is, all recover sulphur from sour natural gas. Those in Ontario recover sulphur along with other products from pyrite and pyrrhotite, and as a co-product in the refining of nickel. The plant in Quebec obtains elemental sulphur from waste gases of oil refineries and a chemical plant. In addition, sulphur in the forms of sulphuric acid and liquid sulphur dioxide is being recovered from smelter fumes and from pyrite and pyrrhotite.

The major source of Canadian elemental sulphur will be the sour natural gas of Western Canada. Some of the largest gas fields yield gas of this type, that is, gas containing a relatively high content of sulphur in the form of hydrogen sulphide. This hydrogen sulphide is toxic and corrosive and must be removed from the gas before it is fed to gas transmission lines. In this process the elemental sulphur is obtained. The content of hydrogen sulphide is as high as 37 p.c. in some of the gas fields and constitutes over 70 p.c. in one field not yet in production.

At the end of 1958, plants capable of producing 1,000 long tons of sulphur from natural gas were in operation in Western Canada, with others in course of construction. It is possible, if the present plans of gas transmission companies are carried out, that 1,000,000 tons of elemental sulphur will be produced annually from natural gas in Western Canada by 1961. However, much of this production must seek export markets since it is greatly in excess of current Canadian requirements and since transportation costs prevent it from competing with imports from the southern United States and Mexico in the main sulphur markets of Eastern Canada.

The newest source of pure elemental sulphur is that obtained as a by-product in the new process of direct electro-refining of nickel matte used by International Nickel at its Port Colborne, Ont., refinery. In view of the scale of operations at the refinery, a substantial quantity of sulphur will be available in the near future. International Nickel in co-operation with Texas Gulf Sulphur Company is also operating a pilot plant at the new iron-ore recovery plant at Copper Cliff, Ont., with the object of recovering elemental sulphur from the sulphur-rich gas.

The plants at Cutler and Port Robinson, Ont., operated by Noranda Mines Limited for the production of sulphur dioxide, elemental sulphur and sintered iron oxide from pyrite and pyrrhotite, are at present being run in such a way as to produce a maximum of sulphur dioxide and a minimum of sulphur because of the great demand for sulphuric acid from the fertilizer and uranium industries.

The new plant of Laurentide Chemicals and Sulphur Limited at Montreal is producing 100 long tons of sulphur a day from waste gases from oil refineries and a chemical plant. The sulphur is being sold mostly in a molten state to various industries in the Montreal area. Deliveries are made by insulated tank trucks.

Materials of Construction.—The record activity in construction during 1958 resulted in a great demand for materials of construction and the mineral industries supplying these operated at record levels.

Preliminary estimates show that nearly 168,000,000 tons of sand and gravel valued at \$97,500,000 were used in 1958. This tonnage was exceeded by that of no other mineral substance produced in Canada, and the value was exceeded by only six other mineral products. This great production came from some 8,000 pits scattered across the country. Part of the production consisted of manufactured sand made directly from limestone, sandstone, and other rocks, which must pass the strictest of specifications for use in concrete and is being used in ever-increasing amounts. It costs more than natural sand and it must be made adjacent to the structures in which it is to be used in order to keep transportation costs to a minimum. Most of the nearly 3,000,000 tons of sand used as fine aggregate in concrete for the St. Lawrence Seaway and Power Project was manufactured sand.

Crushed stone for use as aggregate in concrete was also produced in record amount in 1958 when an estimated 40,517,000 tons valued at \$57,700,000 was marketed. This production came from more than 500 quarries.

Gypsum was the only mineral connected with the construction industry to show a decline in production in 1958 but, even so, value was well up over the previous year; 4,043,364 tons valued at \$8,302,037 were produced in 1958 compared with 4,577,492 tons valued at \$7,745,105 in 1957. The reason for the decline in production was a prolonged strike at the quarries of the largest producer at Windsor, N.S. This is also an area where cost of production is low and that accounts for the increase in value per ton. The quarries in Nova Scotia are among the largest in the world. Almost all the production is shipped by boat to gypsum plants along the Atlantic coast of the United States where it is made into various products. Gypsum is also quarried in Newfoundland, New Brunswick, Ontario, Manitoba and British Columbia. The principal products made are wallboard, wall plaster, sheathing board, lath and tile. The use of gypsum has developed phenomenally in the past few years.

The Portland cement industry, which has plants in all provinces except Nova Scotia and Prince Edward Island, also achieved a record production in 1958 of 6,068,977 tons valued at \$95,869,547. The industry has expanded threefold since the end of World War II but, even so, was unable until 1957 to supply all the domestic demand and large imports were necessary. In 1958 imports were only nominal and were greatly exceeded by exports. Two new companies entered the Canadian Portland cement industry in 1958. These were Lafarge Cement of North America Limited at Vancouver, with a plant designed to produce 1,300,000 bbl. per year, and Lake Ontario Portland Cement Company at Picton, Ont., with a plant rated at 1,800,000 bbl. a year. Canada now has what is probably the highest per capita output of cement of any country, indicative of the high level of industrialization in this country.

Sales of clay products made from domestic clays totalled \$42,611,899 in 1958, the highest on record. In addition products valued at \$20,656,000 were made from imported clays. About 200 plants scattered through all provinces except Prince Edward Island, are engaged in making clay products in this country. The products include brick, tile, ceramic pipe, pottery, porcelain and certain types of refractories. A program of modernization in effect throughout the industry has been speeded up in the past year or two in order to take advantage of natural gas as fuel for kilns.

An industry closely allied to the clay products industry is that engaged in the manufacture of light-weight aggregates made from clay, shale, slag, perlite and vermiculite. When used with cement they give concrete and plasters that are only one-half to two-thirds the weight of the conventional products and thus by reducing the weight of structures in which they are used, such as bridges and tall buildings, they enable important savings to be made in the structural steel frameworks. The light-weight aggregate industry has

developed most rapidly on the prairies where ordinary aggregates such as stone and gravel are not plentiful, but there are a number of important plants in Eastern Canada and in 1958 large new plants were under construction in Quebec and British Columbia.

The lime industry had a record production in 1958 when 1,612,761 tons valued at \$20,439,311 were marketed. Although lime is important as a structural material its uses for chemical purposes have become paramount and now only 10 to 15 p.c. of the output goes into construction. A major factor in the increase in sales of lime in 1958 was the demand from the Ontario uranium industry.

Asbestos.—Sales of asbestos fibre decreased to 942,135 tons valued at \$96,168,029 in 1958 from record sales of 1,046,086 tons valued at \$104,489,431 in the previous year. Capacity to produce asbestos is still growing, however, and during the latter half of 1958 three new mills came into production in the Eastern Townships of Quebec which will have the capacity to increase the industry's output by 13 p.c. and the world's output by nearly 9 p.c. These new mills are the 5,000-ton-per-day mill of Lake Asbestos of Canada Limited at Black Lake, the 3,000-ton mill of National Asbestos Mines Limited, and the 2,500-ton mill of Carey Canadian Mines Limited, both at Thetford Mines. The latter mill replaces that of the former Quebec Asbestos Corporation which ceased production when the new mill was in full operation.

In other parts of Canada, outside the main asbestos-producing area of Quebec, developments were also going forward. In Newfoundland \$1,000,000 or more is to be spent in readying for production a large chrysotile asbestos deposit in the Baie Verte district of the Burlington Peninsula on the east coast. Reserves are estimated at 23,300,000 tons. This development is being undertaken by Advocate Mines Limited, and is being financed jointly by Canadian Johns Manville Company Limited, Patino Limited of Canada, Amet Corporation Incorporated, and Financière Belge de l'Asbestos Ciment S. A. Johns Manville is to manage and operate the project. The other firms are large users of asbestos in Europe and elsewhere.

Production of asbestos by Cassiar Mines Limited at Cassiar in northern British Columbia continues to increase rapidly. The company has acquired control over three additional deposits of chrysotile in northern British Columbia and Yukon and will be undertaking development work on them in the near future. Another discovery of asbestos was made in the Dease Lake district of British Columbia at the close of the year.

Salt.—In keeping with the growth of the chemical industry of which it is a very important raw material, the production of salt has increased rapidly in the past few years, having nearly doubled since 1953. The 1958 production was a record 1,863,866 tons valued at \$15,482,850. Exports to the United States of 406,563 tons also constituted a record. Prior to 1955 exports of salt from Canada were very small, but in that year Canadian Rock Salt Company began the production of rock salt from a new mine at Ojibway, Ont., at the rate of 500 tons per hour, most of which was exported by boat to the United States. Exports were further increased in 1958 when concentrated brine from the same company's property was exported to the Detroit area through a pipeline buried in the bed of the Detroit River. Another salt mine will be operated at Pugwash, N.S., by Malagash Salt Company, a subsidiary of Canadian Salt Company, Montreal, when shaft-sinking difficulties have been overcome. Dominion Tar and Chemical Company Limited of Montreal, through its subsidiary Sifto Salt Limited, is sinking a shaft near Goderich, Ont., with the intention of mining a 20-foot bed of pure rock salt found in that locality. Thus rock salt is becoming by far the most important product of the industry. Prior to 1955 all of the salt produced in Canada with the exception of the output of the Malagash Salt Company in Nova Scotia was obtained by introducing water to deeply buried salt beds and pumping up the resultant brine which was used as such by nearby industries or the salt was recovered from it by evaporation. Rock salt is a much cheaper product than evaporated salt and it or the brine is the preferred raw material for salt-using chemical industries engaged in making caustic soda, chlorine and other products.

Salt is produced in Nova Scotia, Ontario, Manitoba, Saskatchewan and Alberta, though only in Nova Scotia and Ontario is it being mined. There are twelve plants operated by seven firms in the Canadian industry.

Fluorspar.—Until 1956, fluorspar mining was a flourishing industry in Newfoundland and Ontario. Over 55 p.c. of the production was exported to the United States chiefly for stockpiling purposes. Stockpiling needs are now filled and value of production dropped from \$3,407,582 in 1956 to \$1,552,255 in 1958. Imports of low-cost fluorspar from Mexico have displaced much of the Canadian fluorspar in the domestic market and what was formerly the largest producer—St. Lawrence Corporation of Newfoundland Limited—closed down its mine at St. Lawrence, Nfld., in 1957. The other large producer—Newfoundland Fluorspar Limited—is a subsidiary of Aluminum Company of Canada and operates to supply the requirements of the parent company. The third producer Huntingdon Fluorspar Mines Limited at Madoc, Ont., produces small quantities of high-grade fluorspar for metallurgical purposes.

Spodumene.—Production of lithia concentrates from spodumene by Quebec Lithium Corporation at Val d'Or, Que., was valued at \$2,643,950 in 1956, rose to \$2,827,143 in 1957 and dropped to \$2,030,000 in 1958. Almost the entire output of the company was sold under contract to Lithium Corporation of America at Bessemer City, North Carolina, for processing for use by the United States Atomic Energy Commission. Following the slowing down in purchases from the United States, the Canadian company plans experimentation in a large pilot plant at Val d'Or with the object of processing spodumene concentrates into lithium chemicals and of developing its own sales outlets direct to consumers.

Uses for both lithium minerals and for fluorspar are expanding. In particular, much is being heard of the use of liquid fluorine as a fuel in a new rocket engine where it is hailed as a major breakthrough in chemical fuels for rockets, displacing boron for the purpose. Its use in quantity as a high-energy propellant is claimed to be close at hand.

Subsection 3.—Petroleum and Natural Gas*

As a result of decreased demand for petroleum and its products, development of Canada's petroleum resources slackened towards the end of 1957 for the first time since the 1947 Leduc discovery. Interest in natural gas development, however, softened the downward trend in the industry. Nevertheless, during the first three-quarters of the year more petroleum and natural gas were produced than ever before and reserves of both commodities continued to rise. At the end of 1957 reserves of crude oil and natural gas liquids totalled 3,269,114,000 bbl., an increase of 139,810,000 bbl. over the previous year. Natural gas reserves increased by 500,000,000,000 cu. feet to over 25,000,000,000,000 cu. feet at the end of 1957. Crude oil has, since 1953, maintained the lead in annual production value among all minerals produced in Canada. Natural gas will add appreciably to this total, beginning in 1958 when the two major gas transmission lines were completed, connecting the gas sources in the West to markets from the Pacific to as far east as the province of Quebec. Production of crude oil was a record in 1957 but the increase over the previous high in 1956 was only 5 p.c.; production in 1958 was about 8 p.c. lower than in 1957.

The size and rate of recent growth of crude oil production in Western Canada is indicated by the following data:—

<i>Item and Date</i>	<i>Alberta</i>	<i>Saskatchewan</i>	<i>Manitoba</i>	<i>British Columbia</i>
NUMBER OF OIL FIELDS—				
December 1954.....	65	30	6	0
December 1955.....	74	37	11	1
December 1956.....	86	46	12	2
December 1957.....	89	39	12	4

* Prepared under the direction of Dr. Marc Boyer, Deputy Minister of the Department of Mines and Technical Surveys, by R. A. Simpson, Mineral Resources Division. A survey of oil and gas pipelines will be found in the Transportation Chapter.

<i>Item and Date</i>	<i>Alberta</i>	<i>Saskatchewan</i>	<i>Manitoba</i>	<i>British Columbia</i>
NUMBER OF OIL WELLS—				
December 1954.....	5,068	1,094	284	3
December 1955.....	6,138	1,655	554	4
December 1956.....	7,390	2,414	736	9
December 1957.....	8,015	3,240	846	20

Expenditures in Western Canada on exploratory and development activities totalled almost \$550,000,000 in 1957. At the end of the year land held totalled 215,000,000 acres, 42 p.c. of which was in Alberta, 25 p.c. in Saskatchewan, 17 p.c. in the Territories, 13 p.c. in British Columbia and the remainder in Manitoba.

Geophysical activity declined in 1957, as it has each year since 1953, and amounted to 1,338 crew months. Work in Alberta accounted for 69 p.c., Saskatchewan 20 p.c. and Manitoba 11 p.c. Altogether, 3,057 wells were drilled—1,911 oil wells, 187 gas wells and 972 dry holes. An average of 204 rigs operated in Western Canada during the year and the average depth of well drilled was 4,700 feet.

Details of oil and gas field activities by province during 1957 and the first half of 1958 follow. Some production estimates for the year 1958 are included.

British Columbia.—The development of the northeastern section of British Columbia is being continued at a rapid rate and, although the chief search at present is to prove more gas reserves, oil is being found. Reserves of natural gas in this area have been placed at over 4,000,000,000 cu. feet. Ninety-two wells were drilled in British Columbia during 1957—11 were successful oil wells, 41 successful gas wells and 40 were dry holes. At the end of the year the province had four oil fields as compared with two in 1956 although production continued to come only from the Boundary Lake and Fort St. John fields. One gas field, the Dawson Creek field, was discovered during the year.

Alberta.—Production of crude oil in Alberta in 1957 amounted to 137,492,316 bbl., more than 6,000,000 bbl. less than in 1956. This was the first time since 1947 that output did not exceed that of the previous year, and the downward trend continued in 1958 when the total was estimated at 112,300,000 bbl.

Development drilling declined a marked 37 p.c. in 1957. Drilling in the huge Pembina field, which in 1956 accounted for almost half of the province's total number of wells, added only 286 wells, to bring the field total to 1,974 wells. The near drilling-out of this field was the major factor in the decline in development drilling; other oil fields rapidly developed during the year included the Keystone, Innisfail, Willesden Green, Harmattan, Sturgeon Lake South and other fields where fewer than 20 successful wells were drilled.

Although development was down from earlier years, exploratory drilling increased by 10 p.c. Of the 113 successful exploratory wells, 21 were new field discoveries. Of the many oil discoveries, the most significant were those in the Virginia Hills, about 120 miles northwest of Edmonton, and at Innisfail, 60 miles north of Calgary. The Virginia Hills discovery was the first well ever to find commercial oil in the Slave Point formation and touched off the exploration which later resulted in further Slave Point discoveries at Swan Hills, Edith Lake, and Kaybob in the area northwest of Edmonton and south of Lesser Slave Lake. The D-3 discovery at Innisfail was followed by extensive development work and was designated a field in November. Also of importance was the Joffre D-2 pool in which 20 wells were drilled during the year.

During 1957, 125 successful gas wells were completed, 70 of them being exploratory and the others development wells. At the end of the year Alberta had 584 gas wells capable of production and 766 capped gas wells. Of the successful exploratory wells, several were significant. The more important discoveries, in terms of reserves, were made in the Calgary, Carson Creek, Keystone, Lambert Creek, Lovett River, Pine Creek and Stolberg areas.

The most significant step-out of a previously discovered pool took place in the Waterton-Castle River area. Following the discovery of gas in the Mississippian formation in 1956, two nearby 'wildcat' wells, one at Castle River and one at Gladstone Creek, were successfully completed in the same horizon in 1957. More recently, two further exploratory tests indicate success and the possibility of a gas field rivalling Pincher Creek in importance. The discovery of the Pine Creek and Waterton reserves account for over one-half of the increase attributed to new discoveries. Reserves of natural gas were raised to 21,100,000,000 cu. feet in 1957 and by Mar. 31, 1958, established reserves had been raised to 22,500,000,000 cu. feet or the equivalent of 23,300,000,000 cu. feet when converted to a common heating value of 1,000 B.t.u. per cu. foot.

A number of Alberta's fields produce condensate gas and during 1957 the daily capacity of natural gas processing facilities was increased from 401,000,000 to 521,000,000 cu. feet. The number of processing plants in operation increased from 10 in 1956 to 12 in 1957, with five more under construction. In addition, the Pincher Creek plant doubled its capacity in 1958 to 120,000,000 cu. feet daily when it was linked with the Trans-Canada pipeline, and total plant capacity to process 'wet' gas then reached 862,000,000 cu. feet daily.

Saskatchewan.—Production of crude oil in Saskatchewan in 1957 totalled 36,861,089 bbl. and in 1958 an estimated 46,500,000 bbl., the latter figure being almost double the 1956 production. This increase, particularly in a period when the national output was down, can be attributed to the preferred geographical location of the province, compared with Alberta, in relation to markets in Ontario and central United States. Drilling activity continued at a rapid rate and in 1957, for the first time, Saskatchewan had more oil well completions than Alberta, bringing in a total of 893 new wells. There were 33 oil discoveries, most of which served to extend field boundaries or to fill in non-producing parts of established areas. The important Midale oil discovery in southeastern Saskatchewan in 1953 has led to the finding by May 1958 of a total of 18 fields in this area. These fields are being developed on the northern rim of the Williston Basin, a large structural feature with its centre in North Dakota. Oil occurs in limestone of Mississippian age at depths from 3,100 to 5,400 feet, the average being approximately 4,100 feet. Increased production of light gravity crude made up over 13,000,000 bbl. of the 16,000,000-bbl. increase in annual production.

Producing fields on the west side of the province are in the vicinities of Lloydminster, Kindersley and Swift Current. With the exception of the comparatively small Smiley field, all are either heavy or medium gravity crude oil fields. Oil fields in these areas produce from sandstone formations of Lower Cretaceous and Jurassic ages and the average well depth is 3,000 feet. Production of medium gravity crude accounted for over 3,000,000 bbl. of the increase of the 1957 production over 1956, while production of heavy gravity crude was down by over 500,000 bbl.

All natural gas reserves are in fields on the west side of the province and occur predominantly in formations of Cretaceous age. Five gas discoveries were made in 1957 and 12 field development wells were drilled. Saskatchewan's natural gas resources are much smaller than those of Alberta or British Columbia and all are reserved for use within the province.

Manitoba.—Oil production in Manitoba was up slightly in 1957 with 6,089,743 bbl. of crude oil being produced. During the year 224 wells were drilled, 127 of which found oil and 97 were dry. Of the 224 wells, 153 were development wells drilled mostly in the North Virden, Virden-Roselea and Daly fields which accounted for almost 85 p.c. of the provincial production. The testing of the Devonian and older formations in the area east and north of the Mississippian truncation, which was begun in 1956, was continued but without success. The 1958 total production was down slightly at an estimated 5,900,000 bbl.

Yukon and Northwest Territories.—The small production from the Northwest Territories comes from the Norman Wells field on the Mackenzie River, 90 miles south of the Arctic Circle. Crude oil from this field supplies a small refinery located there. Only

four wells were drilled in the Northwest Territories, one of which found gas and three were dry holes. All were in the area southwest of Great Slave Lake. The drilling of one well in Yukon was suspended. Production in 1957 amounted to 420,844 bbl. and in 1958 to an estimated 471,000 bbl.

Eastern Canada.—Drilling in Ontario continued at the same rate as in previous years; 421 wells were drilled, 46 of which found oil, 162 found gas and 213 were dry. Only two discoveries were made, the remainder being development wells, but these were not significant. Production of crude oil amounted to 623,666 bbl. which increased to an estimated 770,868 bbl. in 1958. A total of 14,400,000,000 cu. feet of natural gas was produced. The continuing search for natural gas led to eight discoveries during the year. Development drilling brought in an additional 154 successful gas wells.

In New Brunswick, production of crude oil amounted to 19,401 bbl. in 1957. Two wells were drilled, one of which found natural gas and the other was dry. Gas production accounts for 85 p.c. of the value of production from the province's single oil and gas field at Stoney Creek. Oil production decreased to approximately 15,400 bbl. in 1958.

Two wells were drilled in the St. Lawrence Lowlands between Montreal and Quebec in 1957, both of them unsuccessful.

Petroleum Refining and Marketing.—There was no change in the number of operating petroleum refineries in Canada in 1957 although two refineries were under construction, both scheduled for completion late in 1958. The 43 plants across the nation had a total capacity of 761,895 bbl. a day. The rate of growth of the refining industry is shown in the following tabulation.

PETROLEUM REFINING THROUGHPUT CAPACITY, BY REGIONS

Region	1939		1950		1957	
	Barrels per Day	P.C.	Barrels per Day	P.C.	Barrels per Day	P.C.

The progress made in the marketing of Canadian crude oil in Canada is indicated by the following figures.

PERCENTAGES OF CANADIAN CRUDE OIL RECEIVED AT REFINERIES

Region	1939	1947	1950	1957
	p.c.	p.c.	p.c.	p.c.
Maritime Provinces.....	—	—	—	—
Quebec.....	—	—	—	—
Ontario.....	0.4	0.5	1.0	86.1
Prairie Provinces and N.W.T.....	37.0	99.5	99.0	100.0
British Columbia.....	—	—	—	100.0
CANADA.....	17.0	8.5	24.4	53.2

Crude oil delivered from domestic oil fields to refineries in Canada totalled 126,914,237 bbl. in 1957; 111,706,671 bbl. were imported to supply the refineries in the Maritimes and Quebec, although a small percentage was delivered to refineries in Ontario.

All exports of Canadian crude oil, except small shipments totalling 92,000 bbl. to Japan, went to the United States. The total amount of crude oil delivered out of Canada for foreign use was 55,674,228 bbl. The State of Washington took 49.4 p.c., California 12.9 p.c. and Minnesota, Wisconsin and Michigan together, 37.7 p.c. In mid-1957, the United States imposed 'voluntary' import restrictions on crude oil entering areas east of the Rocky Mountains. In December, the remainder of the United States was also brought into the program but, since demand had been low for Canadian crude from all its traditional United States markets, the import restrictions had no immediate effect.

Natural Gas Marketing.—The domestic market for natural gas exceeded the original estimates of both the major gas transmission pipelines in Canada. Both were planning programs to increase capacities earlier than had been contemplated. Other companies were requesting permission to move large quantities of natural gas southward from Alberta, although surplus reserves had not reached sufficient proportions to meet the requirements of the envisaged plans. Nevertheless, increased interest in Canadian natural gas, particularly for export to the United States, served to accelerate exploration.

Subsection 4.—Coal*

Although there appeared to be a stabilizing trend in the coal industry during 1955 and 1956 the increasing conversion to oil and gas by the railways, various industries and commercial and household consumers, aided by the generally milder winter and recession in 1957, resulted in further reverses to the industry.

In 1957 the industry recorded its greatest loss of the past seven years, production dropping to 13,189,155 tons—11.6 p.c. from 1956 and 31.1 p.c. from the record of 19,139,112 tons in 1950. With the exception of the depression years of 1931 to 1933, the 1957 production was the lowest since 1912. Of the 1957 output 68.6 p.c. was bituminous coal, 14.3 p.c. subbituminous and 17.1 p.c. lignite. Nova Scotia contributed about 43 p.c. of the total, Alberta 24 p.c., Saskatchewan 17 p.c., British Columbia and Yukon over 8 p.c. and New Brunswick just over 7 p.c. Every province showed a decrease in production. Whereas Nova Scotia, New Brunswick, Saskatchewan, British Columbia and Yukon showed, collectively, a decrease of almost 6 p.c. compared with 1956, Alberta's output decreased by 27 p.c.; bituminous coal, most of which goes to the railways, accounted for 68 p.c. of this decrease.

The apparent total consumption of coal in Canada decreased from 36,313,144 tons in 1956 to 31,516,119 tons in 1957, a drop of 13.2 p.c. Whereas in 1956 over 61 p.c. of the coal consumed was imported, in 1957 the percentage was down to somewhat less than 60, of which about 81 p.c. was bituminous coal used in Central Canada. Coal imports decreased by almost 14.2 p.c. from 1956, while the indigenous production decreased by only 11.6 p.c. Coal sales made by retail fuel dealers decreased 14.0 p.c. from 1956, railway coal decreased by over 40 p.c., and coal used for industrial purposes increased about 1.0 p.c. Thus though sales of coal for household, commercial and railway purposes are continuing to yield to liquid and gaseous fuels, industrial coal consumption is slowly increasing.

The consumption of briquettes, of which about 77 p.c. are made from bituminous coal, decreased sharply from 879,208 tons in 1956 to 467,825 tons in 1957. About 61 p.c. of the amount marketed (73 p.c. of the Canadian output) was used by railways in Western Canada mainly as locomotive fuel. However, the railway market for this type of fuel was reduced from 620,000 tons in 1956 to 287,000 tons in 1957. On the other hand, household and commercial consumption showed an increase from 159,208 tons to 180,768 tons despite increased competition from oil and gas.

Although the coal industry's economic position has been weakened, greater efforts are being made not only to maintain but to improve its competitive position in the market by reducing costs of production, improving quality, and tailoring the types and grades of coal to suit varied consumer requirements. Mechanization of underground mining is progressing especially in eastern collieries where most of the coal is mined mechanically. The Dosco "miner" is used in practically all the mines of the Dominion Coal Co. Ltd., on longwall faces, and other machines of the ripper type suitable for room and pillar mining are also employed. In addition, a boring type miner was introduced in one of the smaller mines in Nova Scotia. Continuous mechanical mining is being experimented with

* Prepared under the direction of Dr. Marc Boyer, Deputy Minister of the Department of Mines and Technical Surveys, by E. Swartzman, Fuels Division of the Mines Branch.

on western Canadian bituminous coal. However, because of technical and engineering problems associated with the steepness of coal seams and the friability of the coals, such mining methods have not yet been established.

Strip mining, practised in all provinces except Nova Scotia where suitable conditions for such mining are practically non-existent, also aids in reducing costs. Almost 35 p.c. of Canada's 1957 output was produced by this method. The whole of Saskatchewan's lignite output was strip mined, almost 81 p.c. of New Brunswick's, about 44 p.c. of Alberta's and 15 p.c. of British Columbia's. On an average the output per man-day in strip mining increased from 13.3 tons in 1956 to 14.5 tons in 1957, compared with an increase from 2.8 tons to 2.9 tons for underground mining. The over-all output per man-day increased by over 2 p.c.

In an effort to produce better quality coals of greater versatility the industry continues to direct attention to the use of modern methods of cleaning, drying, dust- and freeze-proofing and briquetting. Additional facilities for cleaning and drying various sizes of coal, including fines, have recently been installed at various collieries in both Eastern and Western Canada.

Assistance given to the coal industry by the federal Department of Mines and Technical Surveys is covered at pp. 513-514 under Federal Government Aid.

Details on coal in the respective coal-producing provinces follow.

Nova Scotia and New Brunswick.—Nova Scotia produces high-volatile and medium-volatile bituminous coking coals in the Sydney, Cumberland and Pictou areas and some non-coking bituminous coal in the Inverness area. Production in 1957 was somewhat lower than in 1956, amounting to 5,685,770 tons valued at \$9.300 per ton. Many of the operations have been mechanized in order to reduce production costs. The Dominion Coal Co. Ltd. plan to establish a very large central cleaning plant for their output in the Sydney area, and the Four Star Collieries Ltd., in the Broughton area, are also planning the establishment of a cleaning plant to beneficiate their coal. When these are completed, over 80 p.c. of Nova Scotia's coal production will be beneficiated by modern methods of cleaning.

New Brunswick coal output comes mainly from a single thin seam of high-volatile bituminous coal in the Minto area. Output decreased from 988,266 tons in 1956 to 976,597 tons in 1957 valued at \$8.386 per ton. In 1955 the first mechanical coal-cleaning plant for cleaning 2 x 0-in. slack was established in this area. As a result of its success from a technical and coal-marketing viewpoint, a second plant to clean 6 x ½-in. coal was placed in operation in 1957. These two plants allow for the cleaning of over 34 p.c. of the total output of New Brunswick. Both plants are equipped with modern mechanical and thermal drying machines.

Much of the output of the two provinces is used locally for industrial and domestic purposes. The remainder, amounting in 1957 to about 43 p.c. of the output, was shipped to Central Canada for commercial, industrial and railway use. The quantity used for thermal power production increased substantially during the year.

Saskatchewan.—This province produces only lignite coal from the Bienfait and Roche Percée fields in the Souris area. Production decreased slightly in 1957, amounting to 2,248,812 tons as against 2,341,641 tons in 1956. The coal was valued at \$1.956 per ton at the mine. Approximately 51 p.c. of the production was shipped to Manitoba and about 14 p.c. to Ontario for industrial, commercial and household use. With the extensive developments in progress for the production of thermal power in Saskatchewan and Manitoba, it is expected that lignite production will increase sharply.

The output of briquettes, which are made from carbonized lignite and used entirely for household and commercial purposes, increased slightly to 40,935 tons in 1957.

Alberta.—Almost all types of coal are produced in Alberta including a growing tonnage of semi-anthracite from the Cascade area. Medium-volatile bituminous coking coal is produced only in the Crowsnest area and output was seriously curtailed during 1957.

Lower-rank bituminous non-coking coals are produced in the Lethbridge and Coalspur areas and in several other areas of the foothills. The coal in the Drumheller, Edmonton, Brooks, Camrose, Castor and Carbon areas is subbituminous and that in the Tofield, Redcliff and several other areas is on the border of subbituminous and lignite. All these lower-rank coals were used mainly for household and commercial purposes but their industrial use is increasing, especially in thermal power production.

Production declined in the province from 4,328,787 tons in 1956 to 3,156,546 tons in 1957. Since the discovery of the Leduc oil field in 1947, coal output has dropped by almost 61 p.c. About 60 p.c. of the 1957 output was subbituminous coal. The production of bituminous coal decreased by about 39 p.c. and that of subbituminous coal by about 17 p.c. Average value of bituminous coal was \$6.466 per ton and subbituminous \$4.864. During 1957 a large producing mine was closed down in the Lethbridge area.

The output of briquettes, which are made from the semi-anthracite and low-volatile bituminous coals of the Cascade area and the medium-volatile bituminous coals of the Crowsnest area, was sharply reduced to 269,147 tons in 1957 compared with 525,202 tons in 1956.

Of the total production of all the coals mined only about 2.2 p.c. was shipped to Central Canada to be used mainly for commercial purposes. About 7.8 p.c., consisting to a large extent of subbituminous coal, was shipped to Manitoba, 21.5 p.c. to Saskatchewan and 21.4 p.c. to British Columbia, for both industrial steam-raising and household use.

British Columbia.—Bituminous coking coal, ranging from high to low volatile, is mined on Vancouver Island and in the East Kootenay (Crowsnest), Telkwa and Nicola areas. Small quantities of subbituminous coal are produced in the Princeton field. Mining on Vancouver Island was confined almost entirely to one mine in the Comox area. Production in 1957 amounted to 1,113,699 tons, a decrease from the 1,472,519 tons produced in 1956. The average value of British Columbia bituminous coal was \$5.924 per ton. Of the total production over 19 p.c. was shipped to Manitoba and about 8 p.c. to Ontario.

Medium-temperature oven (by-product) coke for industrial consumption is manufactured chiefly in the Crowsnest area. The single briquetting plant in the province produced over 84,000 tons of railway briquettes in 1957 as against 188,000 tons in 1956. A quantity of coking coal from the Crowsnest area was exported to southwestern United States for blending in the manufacture of metallurgical coke.

Section 2.—Government Aid to the Mineral Industry*

Subsection 1.—Federal Government Aid

The Department of Mines and Technical Surveys.—The federal Department of Mines and Technical Surveys came into being on Jan. 20, 1950, in the re-organization of the former Department of Mines and Resources. The Department has five branches—Surveys and Mapping Branch, Geological Survey of Canada, Mines Branch, Dominion Observatories, and Geographical Branch. The Department's functions include the administration of the Emergency Gold Mining Assistance Act and of the Explosives Act.

Surveys and Mapping Branch.—The Branch provides the base maps required for use in the development of Canada's natural resources, produces and distributes all Canadian aids to navigation, is responsible for legal surveys of federal lands and provides a national system of levelling and precision surveys for use as geodetic control by federal, provincial and private agencies.

The Geodetic Survey provides the original surveys that form the framework or basic control for mapping throughout Canada and for engineering and surveying projects related to natural resources development. Survey stations are established at fairly regular

* Revised, under the direction of the Deputy Minister, in the Editorial and Information Division, Department of Mines and Technical Surveys, Ottawa.

intervals across Canada and are marked by permanent monuments whose latitudes, longitudes and elevations above mean sea level are determined with a high degree of accuracy.

The Topographical Survey provides topographical maps that show all significant natural and artificial features fundamental to the study and economic development of mineral and other natural resources. The Field Survey Section is responsible for the field surveys that provide ground control for mapping from aerial photographs, and the Air Surveys Section plots and produces maps from these aerial photographs. The National Air Photographic Library indexes, preserves and distributes prints of all aerial photography done by or for the Federal Government. The Topographical Survey also administers the Canadian Board on Geographical Names.

The Legal Surveys and Aeronautical Charts Division makes and records legal surveys of federal Crown lands in the Yukon and Northwest Territories, the National Parks and Indian lands and reserves. This Division prepares aeronautical charts and electoral maps and prepares and distributes flight manuals.

The Canadian Hydrographic Service is responsible for the charting of the coastal and inland navigable waters of Canada, the analyses of tides and tidal current phenomena and the investigation of water-surface elevations of the St. Lawrence-Great Lakes waterway. The resultant data are published in the form of official navigation charts, volumes of Sailing Directions, Tide Tables and Water Level Bulletins.

The Map Compilation and Reproduction Division prepares, drafts and reproduces maps, charts and plans for lithographic printing in multicolour. The work includes the preparation and photo-reproduction of air chart bases, the reproduction and printing of air information for aeronautical charts, the preparation and printing of topographic maps and the reproduction and printing of hydrographic charts.

The Branch had 13 geodetic, 27 topographic, 15 legal survey and 20 hydrographic parties in the field in 1958.

Geological Survey of Canada.—The primary function of the Geological Survey is to obtain information on the geology of Canada that will be of assistance in the search for and development of mineral deposits. The results of its activities also provide a basis for the appraisal and conservation of Canada's mineral resources generally, including water supplies, for soil surveys, and for the solution of geological problems that frequently arise in construction projects. Reports issued by the Geological Survey include: memoirs with fairly complete descriptive accounts of the geology of particular areas, usually accompanied by geological maps; bulletins dealing with problems rather than areas; papers issued as soon as possible after the close of the field season, treating separately of each area and summarizing the information acquired; and the Economic Geology Series dealing in a comprehensive way with mineral deposits of a particular type. Information circulars, issued in advance of the more detailed reports, contain data of immediate interest to prospectors. Coloured geological maps are issued on various scales from one inch equalling a few hundred feet to one inch equalling eight or more miles, the common standard scales being one inch to one mile and one inch to four miles. Preliminary maps showing the geology are issued shortly after the field season ends for those areas where the search for metals or minerals is active. Metallogenic maps show the Canada-wide distribution of known occurrences of particular metals classified according to the type of deposit.

The Precambrian Division is responsible for mapping and studying the rocks of the Canadian Shield and of the Arctic Islands. These studies help to establish the geological history and structure of the regions and the information is used as a guide in the search for mineral deposits.

The Post Precambrian Division is responsible for mapping and studying the rocks of the Appalachian and Cordilleran regions and the unconsolidated materials throughout Canada. The application of geology to engineering problems and the study of Canada's groundwater resources are also the responsibility of this Division.

The Fuels and Stratigraphic Geology Division includes stratigraphic palaeontology, the geology of fuels (oil, natural gas and coal), subsurface geology, and research on coal. Its function is to establish the character, age, thickness and correlation of both exposed and concealed sedimentary formations and to map the distribution and structure of these formations with the object of determining the economic possibilities of prospective oil, gas and coal bearing areas of Canada.

The Mineralogy Division makes mineralogical, geochemical, petrological, and isotopic studies of Canadian mineral deposits and associated rocks. Laboratories provide mineral identifications for the public, supply officers of the Survey with mineralogical, geochemical and geochronological data, and permit research on the genesis of ores, fuels and rocks. Systematic mineral collections are maintained and mineral and rock collections are prepared for use by prospectors and educational institutions.

The Mineral Deposits Division conducts special field studies on the geology of mineral deposits with particular regard to economic possibilities, origin, distribution and the establishment of clues for prospecting for similar deposits. Reports and other information on the geology of Canadian mineral deposits are compiled and special reports on deposits and prospecting are published. The Division acts as official agent of the Atomic Energy Control Board in conducting research on uranium deposits and in receiving and compiling reports from companies operating under exploration and mining permits from the Board, and maintains a laboratory for making radiometric assays and identifications of radioactive minerals.

The Geophysics Division gathers, compiles and interprets geophysical data relating to the geology of Canada. Fundamental research is carried out in some phases of geophysical work.

In 1958 the Geological Survey had 77 parties in the field—a working force of 360 men.

Mines Branch.—Investigations undertaken in Branch laboratories cover a wide range of technical projects of importance to the advance of fundamental research; to the processing of ores, industrial minerals and fuels on a commercial scale; and to the theory and practice of physical metallurgy.

The Mineral Dressing and Process Metallurgy Division serves Canada's mineral industry through tests, investigations and research on all types of Canadian ores. The main purposes of these activities are to devise economic and efficient methods of processing ores—a service of special benefit to new mining ventures and particularly to those developing low-grade or complex deposits—and to assist mine operators in solving problems encountered in mill practice.

The work of the Radioactivity Division is centred on investigations relating to treatment of radioactive and less common ores. Activities include research on ore treatment and chemical process methods, provision of chemical and radiometric assay services, development of analytical methods, mineralogical investigations, and also work on application of radiometric methods and tracer techniques in the mining and metallurgical industries. Much of the work done is of direct assistance to industry.

The work of the Industrial Minerals Division consists of tests, research and investigative work on industrial minerals, including water used for industrial purposes. The Division makes field studies of deposits, examines industrial processes utilizing them and conducts research into methods of beneficiating minerals from deposits of marginal and submarginal quality to bring them to the standards demanded by modern industry.

The Fuels Division studies the properties of fossil fuels in Canada to determine the most efficient means of utilizing fuel resources. Most of the work on coal is directed to investigations on the immediate problems of the industry and to engineering studies on the most efficient use of coal in combustion applications with particular reference to thermally generated electric power. Such investigations include work on the evaluation of cleaning performance and the beneficiation of coal fines that are difficult to market, the uses of coal in the metallurgical industries and the study of stress phenomena in mining. Research

in petroleum is directed mainly to problems in the refining of heavy crudes and high-sulphur bitumens, and to the chemical evaluation of oils and bituminous substances for classification and genetic purposes.

The Physical Metallurgy Division aids the metal industries through the development of new alloys, new manufacturing techniques and new applications and in activities aimed toward improving present practices in metal fabrication. It also conducts fundamental research on the properties and behaviour of metals. The Division serves the Department of National Defence by extensive research and investigative work, concerned broadly with the development of defence materials and prototype equipment and with the metallurgical problems of that Department. It is also operative in the nuclear metallurgy field.

Dominion Observatories.—The two main units of the Dominion Observatories are the Dominion Observatory at Ottawa, Ont., and the Dominion Astrophysical Observatory at Victoria, B.C. Permanent magnetic observatories are maintained at Ottawa and Agincourt, Ont., Meanook, Alta., Victoria, B.C., and at Resolute Bay and Baker Lake, N.W.T. Seismic stations for recording earthquakes are operated at Victoria, Horseshoe Bay and Alberni, B.C., Banff, Alta., Saskatoon, Sask., Ottawa, Ont., Seven Falls and Shawinigan Falls, Que., Halifax, N.S., and Resolute, N.W.T.

The Dominion Observatory at Ottawa is responsible for the time service of Canada which involves nightly astronomical observations of star positions and radio broadcast services for distributing accurate time to all parts of Canada. Other astronomical activities centred at Ottawa include upper atmospheric studies by means of meteor observations, studies of the sun and its effect on earthly conditions and mathematical studies of the atmospheres of the sun and stars. The geophysical work, also administered from Ottawa, includes the magnetic survey of Canada with emphasis on aids to air and sea navigation, as well as field and observatory work of interest to the geophysical prospector. The methods of seismology are employed to study important aspects of the earth's crust in Canada and to assist in world-wide investigations of the earth's interior. Gravity observations are carried on throughout Canada with a generally similar purpose, special attention being paid to methods of locating mineral deposits.

The Dominion Astrophysical Observatory at Victoria is devoted to fundamental research into the physical characteristics of the sun, stars, planets and the material of interstellar space. Its 73-inch reflecting telescope is one of the largest in the world and through its use many important contributions have been made to astronomical knowledge.

A radio telescope under construction at Penticton, B.C., will give the Branch a valuable new tool for research in radio astronomy.

The Geographical Branch.—The function of the Branch is to organize and make available all the geographical data on Canada that might be of use in promoting the country's economic, commercial and social welfare. The work is of two kinds—the compilation of geographical material of national significance, and geographical surveys in the field. Land surface conditions, types of vegetation and the structure of towns and cities are typical subjects of investigation.

Mineral Resources Division.—The Division provides a mineral information service that is freely used by government departments, mining and allied industries and others interested in mining or its significance in the Canadian economy. A mineral resources index inventory is maintained of all known occurrences and of mines, both active and potential. The Division makes economic studies of different phases of the mining industry. It administers the Emergency Gold Mining Assistance Act, prepares reports on request to aid in the administration of such matters as tax exemptions on new mining properties, and prepares reports and briefs on general legislation, taxation and tariff matters connected with the mineral industry. The Division is widely known for its publications among the most valuable of which are the annual reviews of production, marketing and other matters concerning 64 minerals. It issues more detailed economic studies of metals and fuels of current interest and prepares annual lists of metallurgical works, metal and

industrial mineral mines, milling plants, coal mines and petroleum refineries. Also published are special monographs on mining laws, taxation and subjects of particular interest to the mineral industry.

The Dominion Coal Board.*—The Board was established by the Dominion Coal Board Act (R.S.C. 1952, c. 86) which was proclaimed on Oct. 21, 1947. By this Act the Board was constituted a department of government to advise on all matters relating to the production, importation, distribution and use of coal in Canada. The Board is also charged with the responsibility of advising upon and administering transportation subventions.

Ancillary to these principal duties the Board is empowered to undertake research and investigations with respect to:—

- (1) the systems and methods of mining coal;
- (2) the problems and techniques of marketing and distributing coal;
- (3) the physical and chemical characteristics of coal produced in Canada with a view to developing new uses therefor;
- (4) the position of coal in relation to other forms of fuel or energy available for use in Canada;
- (5) the cost of production and distribution of coal and the accounting methods adopted or used by persons dealing in coal;
- (6) the co-ordination of the activities of government departments relating to coal; and
- (7) such other matters as the Minister may request or as the Board may deem necessary for carrying out any of the provisions or purposes of the Act.

In addition the Dominion Coal Board Act provides authority in the event of a national fuel emergency to ensure that adequate supplies of fuel are made available to meet Canadian requirements.

Assistance by transportation subventions, which have been maintained in varying degrees during the past 30 years, was designed to further the movement of Canadian coals by equalizing as far as possible the laid down costs of Canadian coals with imported coals. As these costs and the conditions of the coal industry are subject to variation, the Board must review from time to time the rates of subvention and the areas where the assistance is required. The subventions in respect of the various Canadian coals are authorized by Orders in Council and are paid from moneys voted by Parliament for the purpose from year to year. During the year ended Mar. 31, 1958, a total of 3,003,788 tons was shipped under subvention and \$8,320,142 was paid in assistance.

Coal subventions of a new type, based on the B.t.u. content of coal used in thermal electric power production, were authorized in January 1958 by the Atlantic Provinces Power Development Act (S.C. 1958, c. 25). The Dominion Coal Board was designated as the Federal Government's administrative agency for subvention matters in agreements made with the provinces under this Act.

As agent to the Minister of Mines and Technical Surveys, the Board has continued to handle applications for loans under the Maritime Coal Production Assistance Act (R.S.C. 1952, c. 179) and administer the loans granted thereunder. The Board has also continued to administer payment under the Canadian Coal Equality Act (R.S.C. 1952, c. 34) which provides a subsidy on Canadian coal used in the manufacture of coke for metallurgical purposes. In the year ended Mar. 31, 1958, 737,030 tons were bonused at a cost of \$364,829.

The Dominion Coal Board has maintained a continuous review of Canada's energy requirements. In view of the growing impact of oil and natural gas on the markets for Canadian coal, the Board and its staff have intensified the study of the relation of the competing sources of energy and of possible new outlets for the solid fuel, especially in the field of thermal power.

The Board, since its inception, has worked toward the co-ordination of the activities of various government departments and other bodies relating to coal. On the matter of technical research as related to marketing and distributing coal, the Board has main-

* Prepared under the direction of W. E. Uren, O.B.E., Chairman of the Dominion Coal Board.

tained close liaison with the Division of Fuels of the Department of Mines and Technical Surveys. Dominion-provincial conferences on coal research have been held annually since 1949 for the purpose of co-ordination and exchange of ideas.

Government purchases of fuel which constitute an important growing outlet for coal have claimed a greater amount of the Board's time. The Interdepartmental Committee on Fuel, set up in the past to co-ordinate and advise on the purchase and supply of fuel to the Armed Services, has remained active. Furthermore, the Dominion Fuel Committee, which was organized in 1956 along similar lines as an advisory body to other government departments, has already demonstrated the value of the establishment of this group.

In a wider sphere the Chairman of the Board has met annually with the Coal Policy Committee of the Provincial Ministers of Mines and the Board has given consideration to recommendations made by the latter body relating to coal. The Board has also kept contact with trade and other associations concerned with the various phases of the Canadian coal industry in order to foster better mutual understanding of governmental and private endeavour. It has generally constituted a central agency through which representations may be made to the Government.

Pursuant to the recommendations of the Royal Commission on Coal (1946), the Board has continued to work for a reduction of customs duties and sales tax on coal mining machinery. It has also maintained its efforts to create a uniform system of coal mine cost accounting which would provide an accurate presentation of the cost of production.

The Dominion Coal Board consists of seven members including the Chairman who is its Chief Executive Officer and has the status of a deputy minister. The Board is responsible* to, and subject to the direction of, the Minister of Mines and Technical Surveys.

Subsection 2.—Provincial Government Aid*

Newfoundland.—The Newfoundland Government, through its Mines Branch, provides several valuable services to those interested in prospecting and mining. It supplies certain geological maps of specific areas to interested parties. It identifies specimens sent in from Newfoundland and Labrador and assays by chemical means those that appear to have some mineral content. If good specimens from a known area warrant further investigation, a geologist from the Department of Mines and Resources is available to visit the locality and give advice. Prospecting and mining permits are issued by the Department and claims are registered.

Nova Scotia.—Under the provisions of the Mines Act (R.S.N.S. 1954, c. 179), the Government of Nova Scotia may assist a mining company or operator in the sinking of shafts, slopes, deeps and winzes and the driving of adits, tunnels, crosscuts, raises and levels. This assistance may take the form of work performed under contract, the payment of bills for materials and labour or the guarantee of bank loans. Any such work must be approved by the Department of Mines. The Government is also authorized to assist the mining industry to procure power on the most economical basis and may guarantee the Nova Scotia Power Commission against any loss incurred on account of capital investments made for that purpose or revenue. Mining machinery and equipment that may be used in searching for or testing and mining minerals may be made available through the Government. Such equipment is under the direct supervision of the Chief Mining Engineer.

The Government of Nova Scotia is also empowered to make any regulations considered necessary for increasing the output of coal. Such regulations cover the appropriation on payment, of unworked coal lands, operation of coal mines, loans or guarantees for loans. Close co-operation is maintained with the Federal Government in carrying out federal regulations made to secure increased production and economical distribution of coal from the mines of the province.

* Compiled from material supplied by the respective provincial governments.

New Brunswick.—There are five divisions under the Mines Branch of the Department of Lands and Mines. The *Mineral Lands Division* administers the disposition of Crown mineral rights including the issuing of prospecting licences, recording of mining claims, issuing of mining licences and leases and other matters pertaining thereto. Detailed and index claim maps are prepared for distribution. The *Mine Inspection and Engineering Division* administers the safety regulations governing operations under the Mining Act. Regular inspections of all mines are performed. Laboratory facilities are maintained. It is the responsibility of this Division to approve equipment used in mines. The *Geological Division* carries on general and detailed geological mapping and investigation. Maps and reports are prepared for distribution. Mineral and rock specimens are examined for prospectors. Preliminary examinations of mineral prospects are performed where requested and circumstances warrant. The *Mine Assessment Division* is responsible for collection of mining tax and royalties and preparation of statistics concerning mineral production. The *Bathurst Division* serves as recording office for northeastern New Brunswick. In addition, claim maps as well as topographical, geological and aeromagnetic maps are available for inspection and distribution. The staff is prepared to provide information concerning the Mining Act and the use of various types of maps.

Quebec.—The Mining Act (R.S.Q. 1941, c. 196) authorizes the Quebec Department of Mines to build, maintain and improve roads needed for mining development. Such work is done by contract under the supervision of departmental engineers. The Act gives the Department considerable latitude in this respect. Certain major roads have been built to new mining districts and completely paid for; on the other hand if a particular property requires a branch road from an established highway the owner may be required to contribute a portion of the cost. To prevent the development of uncontrolled settlements in the vicinity of operating mines the Department regulates the use of land and permits the establishment of well organized communities. The municipal organization of such communities is administered by the Department of Municipal Affairs.

The Department maintains well equipped laboratories for the benefit of prospectors, geologists, engineers and mine operators. The facilities include equipment for mineralogy, petrography, ore dressing, and analysis by wet or dry assays, spectrography or X-ray. Qualitative and mineralogical determinations are made free of charge but quantitative analyses are charged for, according to a tariff schedule. The Mining Act provides free coupons to be used by prospectors in paying for such analyses.

The province has authorized the establishment of research laboratories to assist mining and metallurgical enterprises in the processes and techniques of extracting, transforming and utilizing ores.

The Department undertakes geological mapping and inspection. The work is divided between two branches, one responsible for reconnaissance (areal) mapping, the other doing detailed mapping in mining districts and inspection of individual deposits or properties. Field parties are headed by geologists or mining engineers. The published reports on these investigations are distributed free upon request. During the field season about 35 parties are maintained in different sections of the province. Offices, in charge of resident geologists, are maintained in mining districts, to collect, preserve and compile geological information disclosed by mining explorations and individual sheets of the compilation are made available to the public.

The Department employs inspectors whose duties are almost exclusively concerned with the safety of workmen in operating mines. Three Mobile Mine Rescue Stations are operated and a mine rescue training program is conducted throughout the province.

In the field of education for prospectors, five-week courses are organized each year at Laval and Montreal Universities. University scholarships are granted each year to deserving undergraduate and postgraduate students in mining, geology and metallurgy, thus contributing to the training of qualified engineers for the benefit of the mining industry. Lectures are given to prospectors at different localities throughout the province.

Ontario.—The Ontario Department of Mines renders a multiplicity of services of direct assistance to the mining industry within the province, as briefly enumerated below.

Mining Lands Branch.—This Branch handles all matters dealing with the recording of mining claims, assessment work, etc., and the final issuance of title to mining lands. As a service to the mining public, individual township maps are prepared and kept up to date showing lands open for staking and recorded and patented claims therein. As new surveys are made or later data become available maps are revised in keeping with such information. District Mining Recorders maintain offices at strategic locations throughout the province.

Geological Branch.—A continuing program of geological mapping and investigation is carried out by the geological staff of the Department. Detailed reports and geological maps of the areas studied are made available to the public. In many of the active areas of the province resident geologists are engaged to gather and make available to the public information concerning geological conditions, exploration and development within their respective districts. One geologist specializing in industrial minerals is maintained on the staff to examine deposits of this type, to investigate methods of treatment and recovery of such minerals and to compile data on the uses, specifications and markets for such products. Collection and dissemination of information on groundwater resources is also a function of the Geological Branch. During the winter months courses of instruction for prospectors are held in various centres throughout the province.

Laboratories Branch.—The Provincial Assay Office located in the East Block of the Parliament Buildings, Toronto, carries out wet analyses and assays of metal and rock constituents on a custom fee basis and also renders the same service free of charge to holders of valid assay coupons issued for the performance of assessment work on mining claims. The Timiskaming Testing Laboratories situated at Cobalt, in addition to performing fire assays and chemical analyses, conducts a bulk sampling plant mainly to assist the producers of the area in the marketing of the cobalt-silver ores. A Cable Testing Laboratory, wherein all hoisting ropes in use at the mines are periodically tested, is operated under the supervision of the Inspection Branch.

Inspection Branch.—The main function of this Branch is the regular examination of all operating mines, quarries, sand and gravel pits and certain metallurgical works with a view to ensuring proper conditions of health and safety to the men employed. District offices to serve the local areas are maintained in the major mining centres of the province. Mine rescue stations in the principal mining sections are operated under the supervision of the Inspection Branch.

Exhibitions.—The Department each year presents displays pertaining to mining within the province at such exhibitions as the Canadian National at Toronto and at other centres from time to time.

Publications Branch.—All maps and reports of the Department are distributed through the agency of the Publications Branch located at the main office of the Department.

Library.—A mining library for the use of the Department and the public is maintained within the Department. This library is comprised mainly of publications and maps of the Federal and Provincial Governments of Canada as well as of numerous periodicals and bulletins from the United States.

Mining and Access Roads.—In 1951 the Department of Mines undertook a program of road construction in the mineralized areas of the province, to open them for prospecting and development and to facilitate the actual operation of mining enterprises. When the importance of this program in its relation to the whole development of northern Ontario became apparent, the Government decided that its scope should be widened and, with that end in view, an interdepartmental committee was set up early in 1955 to decide

on matters of policy and to determine the locations and priorities of the proposed roads. The Minister of Mines sits on this committee with the Ministers of Lands and Forests, of Public Works, and of Highways.

The Department of Highways supervises the construction of all access roads. Certain roads may be subsidized while others may be financed solely by Department of Mines funds. The sum of \$1,000,000 a year has been made available for these projects. Fifty-five roads, totalling about 500 miles, have been completed since 1951.

Manitoba.—The Mines Branch of the Manitoba Department of Mines and Natural Resources offers five main services of assistance to the mining industry: maintenance, by the Mining Recorder's office at Winnipeg and The Pas, of all records essential to the granting and retention of titles to every mineral location in Manitoba; compilation, by the geological staff of the Branch, of historical and current information pertinent to mineral occurrences of interest and expansion of this information by a continuing program of geological mapping; enforcement of mine safety regulations and, by collaboration with industry, introduction of new practices such as those concerned with mine ventilation and the training of mine rescue crews which contribute to the health and welfare of mine workers; and maintenance of a chemical and assay laboratory to assist the prospector and the professional man in the classification of rocks and minerals and the evaluation of mineral occurrences.

Manitoba also aids the mining industry by the construction of access roads to mining districts.

Saskatchewan.—Assistance to the mining industry in Saskatchewan is administered by the Mines Branch, Department of Mineral Resources, with its head office at Regina. This Branch is headed by a Director and comprises three divisions.

The Geology Division is directed by the Chief Geologist, and maintains resident geologists in or near the principal mining areas. The Division conducts prospectors' schools giving basic training in geology, mineralogy, prospecting and exploration techniques and administers the Prospectors' Assistance Plan which assists by lending equipment, paying certain transportation costs and by providing technical advice. During the summer months, geological parties, under the direction of the Chief Geologist, survey and map attractive areas and prepare reports which are made available to the public. In 1957 and 1958 magnetometer and electro-magnetic surveys were conducted on approximately 3,000 sq. miles of the Precambrian area.

The Engineering Division is primarily responsible for the safety of people working in mines and makes periodic inspections of mines and quarries. A permanent Mining Inspector is stationed at Uranium City and, in addition to regular inspections, he conducts programs of first aid instruction and mine-rescue training.

The Mining Lands Division is responsible for making disposition of all Crown minerals with the exception of petroleum and natural gas, and maintains records respecting areas let out by lease, permit or claim. Recording offices, having the responsibility of assisting the public in determining the lands available and accepting applications, are located at Regina, Prince Albert, La Ronge, Uranium City and Flin Flon.

Alberta.—Alberta Government assistance to the mining industry is diversified in character. The Mines Division of the Department of Mines and Minerals regulates coal mines and quarries and maintains standards of safety by inspection and certification of workers. The Workmen's Compensation Board also maintains safety standards and trains mine rescue crews. The oil and gas industries are served in a similar way by the Oil and Gas Conservation Board. Its regulatory measures, however, are also concerned with preventing the waste of oil and gas resources and with giving each owner of oil and gas rights the opportunity of obtaining a fair share of production. This Board compiles periodic reports and annual records which are of invaluable assistance in oil development in Alberta. The mining industry is also served by the Research Council of Alberta which has made geological surveys of most of the province and has carried forward projects

concerned with the uses and development of minerals. The Council has studied the occurrence, uses and analysis of Alberta coals and their particular chemical and physical properties, the use of coals in the generation of power, the upgrading and the cleaning of coal and has also studied briquetting, blending, abrasion loss, shatter and crushing strength, asphalt binders and dust-proofing of coal. Studies have been made of glass sands, salt, fertilizers, cement manufacture and brick and tile manufacture.

The province from time to time has had Commissions examine various aspects of the mining industry when it has considered that their findings would be of assistance in developing such industries. The province, together with the Canadian Association of Oil Well Drilling Contractors and the Western Canada Petroleum Association, maintains a detailed supervisory and safety training program concerned with the drilling of oil and gas wells. Of assistance also to mining companies and oil companies are the special deductions provided for in the Alberta Corporation Income Tax Act. These follow the parallel provisions in the federal Income Tax Act.

British Columbia.—The Department of Mines of British Columbia provides the following services: detailed geological mapping as a supplement to the work of the Geological Survey of Canada; free assaying and analytical work for prospectors registered with the Department; assistance to the prospector in the field by departmental engineers and geologists; grubstakes, limited to a maximum of \$500, for prospectors; assistance in the construction of mining roads and trails; and inspection of mines to ensure safe operating conditions.

Section 3.—Mining Legislation

Federal Mining Laws and Regulations.—The Federal Government administers the mineral properties of the Yukon and Northwest Territories as well as those within Indian reserves and in National Parks.

Mining Acts and Regulations covering the Yukon and Northwest Territories are administered by the Mining and Lands Division, Northern Administration and Lands Branch, Department of Northern Affairs and National Resources. Mineral rights underlying grants issued for federal lands are reserved to the Crown in the Yukon and Northwest Territories.

Mining rights in the Yukon and Northwest Territories may be acquired by staking claims under the appropriate Act or Regulations. Twenty-one-year leases of claims may be acquired. These leases are renewable.

The disposal of minerals occurring in an Indian reserve is subject to the consent of the Indians occupying the reserve and to treaties relating thereto.

The Acts and Regulations governing mining and quarrying on federal lands are summarized in Report No. 854, entitled *Digest of the Mining Laws of Canada*, issued by the Mines Branch, Department of Mines and Technical Surveys, Ottawa. This publication also lists all the laws and regulations pertaining to mining on federal lands. Copies of these individual Acts and Regulations may be obtained by applying to the Northern Administration and Lands Branch mentioned above. Another publication of interest in connection with mining regulations and available from the Mineral Resources Division of the Department of Mines and Technical Surveys is entitled *Summary Review of Federal Taxation and Certain Other Federal Legislation Affecting Mining, Oil and Natural Gas Enterprises in Canada*.

Provincial Mining Laws and Regulations.*—All Crown mineral lands lying within the boundaries of the several provinces (with the exception of those within Indian reserves and National Parks which are under the jurisdiction of the Federal Government) are administered by the respective provincial governments.

* Compiled from material supplied by the provincial governments.

The granting of land in any province except Ontario and Nova Scotia no longer carries with it mining rights upon or under such land. In Ontario mineral rights are expressly reserved if they are not to be included. In Nova Scotia all minerals belong to the Crown except limestone, gypsum and building materials and, in granting land from the Crown, the right to these minerals goes with the title. In Newfoundland mineral and quarry rights are expressly reserved. Some early grants in British Columbia, Alberta, Saskatchewan, Manitoba, New Brunswick, Quebec and Newfoundland also included certain mineral rights. Otherwise mining rights must be separately obtained by lease or grant from the provincial authority administering the mining laws and regulations. Mining activities may be classified as placer, general minerals (or veined minerals and bedded minerals), fuels (coal, petroleum, gas) and quarrying. Provincial mining regulations under these divisions are summarized in the following paragraphs.

Placer.—In most provinces in which placer deposits occur there are regulations defining the size of placer holdings, the terms under which they may be acquired and held, and the royalties to be paid.

General Minerals.—These minerals are sometimes described as quartz, lode, or minerals in place. With the exception of British Columbia the most elaborate laws and regulations apply in this division. In all provinces except Alberta a prospector's or miner's licence, valid for one year, must be obtained to search for mineral deposits, the licence being general in some areas but limited in others. A claim of promising ground of a specified size may then be staked. This claim must be recorded within a time limit and payment of recording fees made except in Quebec where no fees are required. Work to a specified value per annum must be performed upon the claim for a period of up to ten years. There is no time limit in British Columbia but \$500 assessment work, of which a survey may represent one-fifth, must be performed and recorded before a lease may be obtained. In Quebec a specified number of man-days of work must be performed and the excess may be carried forward for renewals of licence; before mining can be commenced a mining concession must be purchased for which it is necessary to produce an engineer's report indicating the presence of an orebody. The taxation applied most frequently is a percentage of net profits of producing mines or royalties. In the Province of Newfoundland the provincial mining tax has been modified since Confederation on Mar. 31, 1949, to conform with the provincial obligations under the Dominion-Provincial Tax Agreement. No other form of taxation or royalty now exists.

Fuels.—In provinces where coal occurs the size of holdings is laid down, together with the conditions of work and rental under which they may be held. In Quebec, ordinary mining claims give rights to all mineral substances and to their development, and stakings for combustible natural gas, salt, coal, mineral oil or naphtha, or iron sands may cover 1,280 acres per claim. Royalties are sometimes provided for. Acts or regulations govern methods of production. In the search for petroleum and natural gas an exploration permit or reservation is usually required. However, in Alberta, Saskatchewan and British Columbia leases usually follow the exploration reservation whether or not any discovery of oil or gas is made because exploration costs are applicable in part on the first year's rental. In other provinces, except Manitoba, the discovery of oil or gas is usually prerequisite to obtaining a lease or grant of a limited area, subject to carrying out drilling obligations and paying a rental, a fee, or a royalty on production.

Quarrying.—Regulations under this heading define the size of holdings and the terms of lease or grant. On Quebec private lands the quarry belongs to the owner; on Crown lands mineral rights belong to the Crown and may be obtained in accordance with the provisions of the law although the rights to exploit peat or marl must be obtained by special licence.

Copies of mining legislation including regulations and other details may be obtained from the provincial authorities concerned.

Section 4.—Statistics of Mineral Production

The importance of mineral production compared with other primary industries in Canada is indicated in Chapter XVI and its part in the foreign trade of Canada is dealt with in Chapter XXI.

Subsection 1.—Value and Volume of Mineral Production

Statistics of the annual value of mineral production are available from 1886, total production being shown for five-year intervals from that date to 1940 and annually for subsequent years in Table 1. These figures are not strictly comparable throughout the period because of minor changes in methods of computing metallic content of ores sold and valuations of products but they do serve to show broad trends in the mineral industry.

The increase in the value of mineral production since the end of World War II has been phenomenal, having more than tripled since 1947. Production per head of the population advanced from \$51.38 in that year to \$132.03 in 1957. Although part of this increase was accounted for by advanced prices, the index of the volume of output from Canadian mines recorded an advance from 106.2 (1935-39=100) to 290.1 in the same comparison.

1.—Value of Mineral Production, 1886-1958

Year	Total Value	Value per Capita	Year	Total Value	Value per Capita	Year	Total Value	Value per Capita
	\$	\$		\$	\$		\$	\$

¹ Beginning with 1935, exchange equalization on gold production is included.

² Value of Newfoundland production included from 1949.

Current Production.—Mineral production in Canada reached its peak in 1957 when a total value of \$2,190,322,392 was recorded. On the basis of preliminary figures, 1958 production declined by about 3 p.c. The most striking gain in production was recorded in uranium which trebled its 1956 value to over \$136,000,000 in 1957 and then more than doubled that figure in 1958. The value of uranium produced is now second only to crude petroleum in the Canadian mining economy.

Downward trends, first apparent in values of copper, lead and zinc in 1957, became general for metals in 1958. Copper declined by \$28,000,000, lead by \$8,500,000, nickel by \$62,000,000, and zinc by nearly \$7,000,000. The value of crude petroleum marketed declined by over \$52,000,000 reflecting production cutbacks and market restrictions. Asbestos shipments were down by 100,000 tons, representing a 7-p.c. decline in value from the 1957 peak of \$104,000,000. Combined values of gold and silver increased by \$7,000,000 in 1958, reversing the 1957 trend when a high premium on the value of the Canadian dollar was reflected in a substantially lower value for relatively stable production. Increased activity in mining of these metals in 1958 brought production to nearly 36,000,000 oz. t.

Metallic minerals, other than uranium, showed substantial declines in value in almost every area as a result of marked price declines and narrowing markets. These factors are sharply illustrated by production and value figures now available for lead and zinc. Despite increased production of over 4,000 tons in 1958, values for lead declined by over

\$8,500,000, and though there was an increase of nearly 15,000 tons in zinc production the total output was valued at \$7,000,000 less than the 1957 output. Shipments of iron ore dropped by over 28 p.c. Nickel production declined by 26 p.c. to a value of \$197,000,000 from the 1957 value of over \$259,000,000, partly because of planned reduction in output and partly because of a prolonged labour dispute.

The value of non-metallic minerals, which had climbed to \$169,000,000 in 1957, dropped back by \$11,000,000 in 1958. Most of this 6.4-p.c. decline was attributable to reduction in asbestos output and to a \$3,600,000 drop in the value of titanium dioxide recoveries. Salt production rose steadily to a total value of over \$15,000,000 in 1958 and increased prices for gypsum brought the 1958 value to over \$8,000,000, although production decreased slightly in both 1957 and 1958.

In the mineral fuels group, natural gas production increased in value by 24 p.c. in 1957 and again by 36 p.c. in 1958. Preliminary figures for 1958 give a total production of 337,996,000,000 cu. ft. The production of crude petroleum maintained its accustomed place as the greatest single dollar producer in the minerals field. The highest production of crude petroleum in Canada's history was reached in 1957 when 181,848,000 bbl. were produced with a total value in excess of \$453,000,000. Production in 1958 fell by 8.4 p.c. to a total of 166,476,268 bbl., valued at just over \$401,000,000, mainly as a result of restricted markets and reduced demand. Coal has declined fairly steadily in volume and value in Canada since 1951. The volume rate of decline was 12 p.c. in 1957 and 13 p.c. in 1958.

In the structural materials group, production of cement levelled off at just over 6,000,000 tons in both 1957 and 1958. Better prices, however, raised the value of cement production by nearly \$20,000,000 since 1956. Sand and gravel production reached a peak of 168,000,000 tons in 1958. Clay products attained a new production peak valued at nearly \$43,000,000 in 1958, an increase of 18 p.c. Production of stone rose by 21 p.c. in 1957 and levelled off at 40,000,000 tons valued at \$57,000,000 in 1958. The rate of increase in all structural materials slowed from 14 p.c. in 1957 to 5 p.c. in 1958.

2.—Quantity and Value of Minerals Produced, 1956-58

Mineral	1956		1957		1958 ^a

Analysis of Current Value and Volume.—To assist in clearer and simpler interpretation of the trends in mineral production in Canada over the ten years 1949-58, the percentage of the total value contributed by each principal mineral in each year is given in Table 3. Values upon which percentages in this table are based are the annual values of mineral production, expressed in Canadian currency, as shown in Tables 1 and 2.

3.—Percentage of the Total Value Contributed by Principal Minerals, 1949-58

The total volume of mineral output attained a wartime peak in 1941 when the production index* stood at 132. Principally because of the steady recession in the mining of gold and other major metals during the next five years, the index gradually declined and reached a ten-year low point of 97 in 1946. Since then, sharp gains in the production of petroleum and other non-metallics together with substantial increases in metals output resulted in a sustained advance to a record high level of 290.1 in 1957.

* The construction of this index, which is a component of the revised index of industrial production, is described in DBS Reference Paper, *Revised Index of Industrial Production, 1935-51*.

4.—Indexes of the Volume of Production of the Principal Mining Industries, 1948-57

(1935-39=100)

NOTE.—Comparable figures from 1935 are given in the 1954 Year Book, p. 523.

Subsection 2.—Provincial Distribution of Mineral Production

The decline in mineral production was general across the country except in Ontario, Saskatchewan and the Northwest Territories, where uranium is produced.

Ontario again led the provinces in mineral output, producing 34 p.c. of the total in 1957 and increasing its contribution to 37 p.c. in 1958. The value rate of increase within the province was 15 p.c. in 1957, but only 6 p.c. in 1958. The greatest gain was, of course, in uranium, which offset major declines in nickel, copper and iron ore. Alberta took over second place in production in 1957 with 18.7 p.c. of the total, edging out Quebec with a contribution of 18.5 p.c. In 1958, however, Quebec regained second place with 17.5 p.c. of the total. Alberta's contribution of 16.0 p.c. in 1958 reflected the decline in petroleum output which forms the major share of mineral contributions in that province. British Columbia ranked fourth in mineral output in 1957 with a contribution of 8.2 p.c., but gave way to Saskatchewan in 1958 with a 10.1-p.c. contribution. The decline in British Columbia during 1958 was 12 p.c., whereas Saskatchewan showed an increase of 23 p.c. Manitoba's production declined 6 p.c. in 1957 but, because of lower marketings of nickel, cobalt, zinc and petroleum, the rate of decrease doubled in the following year.

An encouraging increase of 26 p.c. in production in New Brunswick in 1957 was offset in 1958 by an equally sharp decline owing to greatly curtailed production of copper and lead and a major decline in output of sand and gravel. Nova Scotia registered a 3-p.c. increase in 1957, but decreased shipments of coal and barite caused a drop of nearly 6 p.c. in 1958. Each of these provinces contributed just over 3 p.c. of the total national production in both years. Newfoundland increased its production of copper, lead and zinc, but the reduced demand for iron ore accounted for most of the 16-p.c. decrease in value of production in the province in 1958.

The Northwest Territories increased its contribution to almost 1.2 p.c. of the total national output by recording an advance of 15 p.c. as compared with a decline of 3 p.c. in 1957.

5.—Value of Mineral Production, by Province, 1949-58

NOTE. Figures from 1899 are given in the corresponding table of previous Year Books beginning with the 1933 edition.

Subsection 3.—Production of Metallic Minerals

The metallic minerals of greatest dollar value in Canada during 1958 were: uranium, nickel, copper, iron ore, gold, zinc, lead and silver. A striking advance was recorded by uranium which became the most valuable of Canada's metals, having moved up from sixth position in 1957. The value of uranium produced was nearly \$100,000,000 higher than the value of nickel which was in second place among the metals. The changes in production and in order of importance of the principal metals during 1957 and 1958 have already been dealt with in Subsection 1, pp. 489-490. The following statistical information gives a comparison of quantity and value figures for each of the principal metals over the ten-year period, 1949-58.

Uranium.—Uranium mineralization has been found in Canada at intervals along the western and southern edges of the Canadian Shield but production is concentrated in four areas within this belt—at Great Bear Lake in the Northwest Territories, Beaverlodge in northern Saskatchewan, and Elliot Lake and Bancroft in Ontario. Although output of uranium first began in the Northwest Territories in 1942, figures were not available until 1954 because of government restrictions. However, it is since that time that the large mines and mills of Saskatchewan and Ontario have come into production. Ontario now contributes well over 75 p.c. of the total value of production, the great mines and mills of its Elliot Lake area constituting the largest uranium-producing camp in the world. At the end of 1958 the industry had in operation a total of 24 mines and 19 mills with a capacity in excess of 42,150 tons of ore a day.

7.—Production and Value of Uranium (U_3O_8), by Province, 1954-58

¹ Figures for 1956 include radium salts, silver, cobalt and uranium oxides; figures for 1957-58 are for uranium oxide (U_3O_8).

Nickel.—The output of nickel reached a peak in 1957, both in quantity and value. The steadily upward trend throughout the postwar period was halted in 1958—a rise in world stocks bringing about a decrease in nickel prices—and curtailed production was reflected in a 26-p.c. decrease in tonnage and a 24-p.c. decrease in value. About 95 p.c. of the 1958 production shown in Table 8 came from the Sudbury area of Ontario and most of the remainder from Lynn Lake in Manitoba. A new mine at Rankin Inlet on Hudson Bay in the Northwest Territories started production in 1957 with about 1,000 tons of nickel.

Canada uses only about 4,000 tons of refined nickel annually. Exports amounted to 85,168 tons in 1958, mostly to the United States, and exports of nickel in matte, etc., amounted to 67,659 tons.

8.—Quantity and Value of Nickel Produced, 1949-58

NOTE.—Figures from 1889 are given in the corresponding table of previous Year Books beginning with the 1929 edition.

Copper.—Production of copper reached its peak value in 1956 but in 1957 declining prices began to have their effect. In that year, although the quantity produced increased by almost 4,300 tons, the value dropped by more than \$86,000,000. By 1958 producers, particularly in Ontario, Manitoba and British Columbia, cut production and some low-grade producers suspended operations, bringing the total quantity down from 1957 by nearly 3 p.c. and the total value down by almost 14 p.c. In Newfoundland, however, copper production showed a fourfold increase, and in Quebec and Saskatchewan the quantity produced was also higher than in 1957. The over-all decrease in operations brought copper down from first place among Canada's metals to third.

9.—Copper Production, by Province and Total Value, 1949-58

NOTE.—Figures from 1886 are given in the corresponding table of previous Year Books beginning with the 1916-17 edition.

¹ Includes one ton valued at \$536 produced in N.W.T.
² Includes 788 tons valued at \$218,663 produced in Nova Scotia and 3 tons valued at \$1,969 produced in N.W.T.

³ Includes 788 tons valued at \$471,962 produced in Nova Scotia.
⁴ Includes 991 tons valued at \$577,868 produced in Nova Scotia.
⁵ Includes 1,028 tons valued at \$757,758 produced in Nova Scotia and 35 tons valued at \$26,290 produced in New Brunswick.

⁶ Includes 404 tons valued at \$334,704 produced in Nova Scotia and 6 tons valued at \$5,272 produced in New Brunswick.
⁷ Includes 5,738 tons valued at \$3,322,400 produced in New Brunswick and 165 tons valued at \$95,672 produced in N.W.T.

⁸ Includes 355 tons valued at \$180,780 produced in New Brunswick and 453 tons valued at \$230,395 produced in N.W.T.

Iron Ore.—Shipments of iron ore from Canadian mines, after all but retaining in 1957 the high point of 22,348,278 tons reached the previous year, recorded a considerable drop to 15,878,481 tons in 1958. The value of production decreased from \$167,221,425 in 1957 to \$121,437,285 in 1958. All producing provinces—Newfoundland, Quebec, Ontario and British Columbia—contributed to the decline.

This levelling-off in production was the result of a slackening in steel production in the United States and an increase in ore stocks both in that country and in Canada. Exports of iron, in the form of ore or concentrates, in 1958 amounted to 13,878,272 tons valued at \$107,674,258, compared with 20,129,501 tons valued at \$152,281,394 in 1957. Of the 1958 tonnage, almost 70 p.c. went to the United States and most of the remainder to Europe, mainly to the United Kingdom. A small quantity was shipped from British Columbia to Japan.

10.—Iron Ore Shipments and Production of Pig-Iron, Ferro-Alloys and Steel Ingots and Castings, 1949-58

NOTE.—Figures from 1886 are given in the corresponding table of previous Year Books, beginning with the 1936 edition.

¹ Factory shipments since 1953.

Gold.—Over the ten-year period 1949-58, Canada's annual gold production has fluctuated narrowly between 4,100,000 oz. t. and 4,500,000 oz. t., and its value between \$140,000,000 and \$169,000,000. Estimates for 1958 show a slight increase in the quantity produced and a little larger increase in value over 1957, more than accounted for by increases in Ontario and Quebec. Newfoundland almost doubled its small 1957 production of 9,755 oz. t. and Saskatchewan output increased by 4,000 oz. t., but in the other producing provinces output declined. Ontario is by far the leading producer, accounting for 58 p.c. of the output in 1958, and Quebec is second with 23 p.c. Canada is the world's third largest producer of gold, accounting for 11 p.c. of world output in 1957.

11.—Quantity and Value of Gold Produced, by Province, 1949-58

NOTE.—Values are calculated at world prices in Canadian funds. Figures from 1862 are given in the corresponding table of previous Year Books beginning with the 1916-17 edition.

¹ Includes 240 oz. t. of gold valued at \$8,052 produced in New Brunswick.

Zinc.—In 1958 the estimated zinc production (including refined zinc, zinc ores and concentrates) was higher than in the previous two years and only 4,720 tons lower than the peak production of 1955. However, depressed prices brought the value down to the lowest point since 1954. Of the 1958 total, 252,000 tons were refined zinc, produced at Trail, B.C., and at Flin Flon, Man. The zinc concentrates produced in Eastern Canada were exported for further processing.

12.—Quantity and Value of Zinc Produced, 1949-58

NOTE.—Figures from 1911 are given in the corresponding table of previous Year Books beginning with the 1939 edition.

¹ Estimated foreign smelter recoveries and refined zinc produced in Canada.

Lead.—Lead production in 1958 in the form of refined pig and recoverable lead in ore and concentrates was estimated to be about 2.3 p.c. higher than in 1957 but value propped 17.0 p.c. Of the total production, British Columbia accounted for 144,684 tons

or 77.0 p.c. The only lead refinery in Canada is located in that province at Trail. Silver-lead ores are mined at Keno Hill in Yukon Territory and lead also occurs in the complex ores at Buchans in Newfoundland. Lead concentrates are produced in Quebec, Ontario and New Brunswick.

13.—Quantity and Value of Lead Produced from Canadian Ores, 1949-58

NOTE.—Figures from 1887 are given in the corresponding table of previous Year Books beginning with the 1929 edition.

Silver.—Silver production in 1958 reached the record amount of 31,300,000 oz. t. with a peak value of \$27,200,000 although the average price per oz. t. was the lowest since 1954. Production of this metal is fairly widespread across the country, being mainly recovered as a by-product in the treatment of gold ores and ores of copper, lead, zinc, cobalt and nickel. British Columbia produced more than 10,000,000 oz. t. from silver-lead-zinc ores and a large part of Ontario's production of 8,081,625 oz. t. originated in the silver-cobalt ores mined at Cobalt. Yukon Territory is the third largest producer followed by Quebec. Canada's annual output of silver is exceeded only by that of Mexico and the United States.

14.—Quantity of Silver Produced, by Province, and Total Value 1949-58

NOTE.—Figures from 1887 are given in the corresponding table of previous Year Books beginning with the 1916-17 edition.

¹ Includes relatively small quantities produced in New Brunswick and Alberta.

Metals of the Platinum Group.—Production in 1958 was well below the peak of 1957 and since prices of these metals declined during the year, the value dropped to little more than half that of the previous year. The whole production comes from the nickel-copper ores at Sudbury, Ont., and the metals are recovered in the form of residues in the electrolytic refinery tanks at Port Colborne, Ont., and at the refinery in Norway to which the Falconbridge Nickel Company Limited ships nickel-copper matte.

15.—Quantity and Value of Platinum and Palladium¹ Produced, 1949-58

NOTE.—Figures from 1921 are given in the corresponding table of previous Year Books beginning with the 1940 edition.

¹ Includes also iridium, rhodium, ruthenium.

Subsection 4.—Production of Non-metallic Minerals (excluding Fuels)

Asbestos is by far the most important item in this group in point of value, followed by salt, gypsum and sulphur. These four items are discussed separately below; the quantity and value of other non-metallic minerals produced are shown in Table 2, p. 521.

Asbestos.—There was a 10-p.c. decline in the tonnage of asbestos produced in 1958 as compared with the high point of 1957, and an 8-p.c. decrease in value. Quebec with eight producing mines accounted for 94.5 p.c. of the Canadian total, Ontario had one producer which recorded an output of 21,539 tons and one mine in British Columbia produced 30,045 tons. Asbestos is used to make fire-resistant cloth, brake linings, gaskets, siding and shingles, insulated pipe covering, and fire-resistant paper.

16.—Quantity and Value of Asbestos Produced, 1949-58

NOTE.—Figures from 1896 are given in the corresponding table of previous Year Books beginning with the 1911 edition.

Year	Quantity	Value	Year	Quantity	Value
	tons	\$		tons	\$
1949.....	574,906	39,746,072	1954.....	924,116	66,409,212

Salt.—The production of salt in 1958 reached the record amount of 1,863,866 tons, a 5.2-p.c. increase in tonnage over 1957 and a 6.7-p.c. increase in value. The only producing province to record a decrease was Nova Scotia where output was reduced by nearly 15,000 tons between 1956 and 1958. Brine wells are operated in Nova Scotia, Ontario, Manitoba, Saskatchewan and Alberta and rock salt is mined in Nova Scotia and Ontario only.

17.—Quantity of Salt Produced, by Province, and Total Value 1949-58

NOTE.—Figures from 1928 are given in the corresponding table of previous Year Books beginning with the 1946 edition.

Gypsum.—Nova Scotia deposits provided over 77 p.c. of the 4,043,364 tons of gypsum mined in 1958. A decrease of 11 p.c. in total tonnage produced was offset by price increases which brought the value of production to over \$8,300,000, for a net gain of 7 p.c. over the 1957 figure of nearly \$7,800,000. Gypsum is exported in crude form to United States plants for processing. In Canada gypsum is used in the manufacture of plaster and wallboard and is added to Portland cement to control the setting.

18.—Quantity of Gypsum Produced, by Province, and Total Value 1949-58

NOTE.—Figures from 1926 are given in the corresponding table of previous Year Books beginning with the 1943-44 edition.

Sulphur.—Figures in Table 19 represent the quantity and value of sulphur contained in derivatives from smelter gases such as sulphur dioxide, sulphuric acid, etc., and in pyrite and pyrrhotite shipments. Sulphur refined from natural gas production is not included.

In Canada sulphur is used in the treatment of sulphite pulps and in the manufacture of rayon, explosives, rubber goods, petroleum refining, matches and insecticides.

¹ Does not include sulphur in acid made from roasting zinc sulphide concentrates at Arvida.

² Includes sulphur in acid made from roasting zinc sulphide concentrates at Arvida.

Subsection 5.—Production of Fuels

Coal.—The production of coal continued its downward trend in 1958, recording a reduction of 11.4 p.c. in both quantity and value from 1957. All producing provinces except Saskatchewan shared in the decrease. Imports and exports were also considerably lower.

20.—Coal Production, by Province, 1949-58

NOTE.—Figures from 1874 are given in the corresponding table of previous Year Books beginning with the 1911 edition.

1953.....	255,274	1,999,908	1958.....	338,544	2,907,513

The sources of coal consumed in Canada in the years 1949-57 are shown in Table 23 and detailed figures of coal made available for consumption in 1957 and 1958 are given in Table 24; the difference between the totals of the two tables in the same year is accounted for by the fact that coal received may be held in bond at Canadian ports and not cleared for consumption until required, and coal received in previous years may be taken out of bond (cleared for consumption) in a later year. Normally the coal made available for consumption is greater than the apparent domestic consumption as coal is landed at Canadian ports and re-exported or ex-warehoused for ships' stores without being taken out of bond but, while remaining in bond at the port, it is available for domestic consumption if required. Consumption figures for 1958 were not available at time of writing.

23.—Consumption of Canadian and Imported Coal in Canada, 1949-57

NOTE.—Figures from 1886 are given in the corresponding table of previous Year Books beginning with the 1921 edition.

¹ Coal reaching Canadian ports whether or not it is cleared through customs, exclusive of 64,942 tons of imported briquettes in 1957 and 35,905 tons in 1958.

Petroleum.—The upward climb of crude petroleum production in evidence since the discovery of the Leduc field in Alberta in 1947 was halted temporarily in 1958. Decreased demand resulted in a drop of 8.5 p.c. in the quantity produced as compared with 1957, mostly accounted for by Alberta which produced 67.5 p.c. of the total output. In proportion to their lesser output, moderate increases were shown by Saskatchewan, Ontario, the Northwest Territories and British Columbia.

25.—Quantity and Value of Crude Petroleum Produced, by Province, 1949-58

NOTE.—Figures from 1936 are given in the corresponding table of previous Year Books beginning with the 1948-49 edition.

Natural Gas Production.—Extensive pipeline construction, permitting the delivery of natural gas to more distant markets, resulted in increased shipments of this commodity to 338,000,000,000 cu. feet in 1958 as compared with 220,006,682,000 cu. feet in 1957. Alberta has by far the major production of natural gas, its flow amounting to 245,500,000,000 cu. feet. Several plants have been built in Alberta to treat natural gas for the removal of sulphur, butane, propane and other hydrocarbons prior to delivery to the transmission pipelines which now extend eastward as far as Quebec City and westward to Vancouver and the northwestern United States.

26.—Quantities of Natural Gas Produced, by Province, and Total Value 1949-58

produced in British Columbia.

Subsection 6.—Production of Structural Materials

Active construction throughout Canada in 1957 and 1958 kept production of all structural materials at a high level. In 1957 this group registered an advance of 14 p.c. to reach a then record total value of nearly \$297,000,000. A new record was set in 1958 when a further 6-p.c. increase brought the total value for the year to over \$314,000,000. All provinces shared in the general increase except New Brunswick and British Columbia. In New Brunswick a 42-p.c. decrease in the value of sand and gravel produced reflected the completion of such heavy construction projects as the Beechwood power project on the St. John River; and in British Columbia the total was affected by a decrease of 18 p.c. in the value of clay products produced and a 5-p.c. decrease in the value of cement produced, the latter despite an increase in tonnage. For Canada as a whole, however, gains of 18 p.c. in the value of clay products, 17 p.c. in tonnage of lime, and just over 5 p.c. in the tonnage of sand and gravel highlighted 1958. Cement production and the quarrying of building stone were practically unchanged from the preceding year.

Cement.—A rise of 20 p.c. in the tonnage of cement produced brought the total to 6,049,098 tons in 1957. Ontario contributed 36 p.c. of this total, Quebec 34 p.c. and all other provinces except Prince Edward Island contributed varying amounts. In 1958 the picture changed little—total production was only slightly higher and the contributions of the two major producers were relatively unchanged. However, price increases of nearly 3 p.c. brought the total value to a record high of close to \$96,000,000.

27.—Quantity and Value of Production, Imports, Exports and Apparent Consumption of Cement, 1949-58

¹ Shipments plus imports less exports.

² Includes imported clinker, other than white.

Clay Products.—The sales value of clay products produced in 1958 was the highest recorded. Common clays suitable for the production of building bricks and tile are found in all the provinces; production is greatest in Ontario and Quebec. Stoneware clays are produced largely from the Eastend and Willows areas in Saskatchewan and shipped to Medicine Hat, Alta., where, utilizing the cheap gas fuel, they are manufactured into stoneware, sewer pipe, pottery, tableware, etc. Stoneware clay also occurs in Nova Scotia and, although it has not been developed extensively for ceramic use, some is used for pottery. Two large plants and a few small plants manufacture fireclay refractories from domestic clay in British Columbia, Saskatchewan and Nova Scotia. Deposits of high-grade, plastic, white burning clays occur in northern Ontario and deposits yielding high-grade china clay have been found along the Fraser River in British Columbia but these have not been used on a commercial scale, nor have the ball clays of high bond strength occurring in the white mud beds of southern Saskatchewan been developed to any extent.

28.—Value (Total Sales) of Clay Products Produced, by Province, 1949-58

Sand, Gravel and Stone.—Deposits of sand and gravel are numerous throughout Eastern Canada with the exception of Prince Edward Island where gravels are scarce. The local needs for these materials are usually supplied from the nearest deposits as their cost to the consumer is governed largely by the length of the haul. This accounts for the large number of small pits and the small number of large plants. Every province except New Brunswick and Prince Edward Island produces natural bonded sand but some grades particularly suitable for certain industries demand a much higher price than ordinary sand. Quebec and Ontario contributed 68 p.c. of the total quantity of sand and gravel in 1958. The greater part of the output is used in road improvement, concrete works and railway ballast, and most of the commercial plants are equipped for producing crushed gravel, a product that can compete with crushed stone.

The stone industry has two main divisions, stone quarrying and the stone products industry. The granite, limestone, marble, sandstone and slate quarries of Canada yield high-grade structural and decorative materials and also supply requirements for chemical and other allied industries. The gross value of stone of all varieties produced in Canada in 1958 totalled \$57,700,000 as compared with \$59,197,662 in 1957. Detailed data for sand, gravel and stone for 1958 was not available at time of writing.

Section 5.—Industrial Statistics of the Mineral Industry

The scope of the annual statistics on mineral production published by the Dominion Bureau of Statistics includes a general review of the principal mineral industries such as the copper-gold, silver-lead-zinc, and nickel-copper industries as well as a section on metallurgical works. Additional data published at irregular intervals include such features as numbers of employees, salaries and wages paid and net value of shipments.

The figures for 'net value of shipments' of industries given in Tables 30 and 31 are, in each table, the settlements received for shipments by producers and the additional values obtained when the smelting of ores is completed in Canada, less the cost of materials, fuel, etc. The totals indicate more nearly the actual returns to the different industries than do the values for the minerals in Table 2 of this Chapter where, with respect to copper, lead, zinc and silver, values are computed by applying the average prices for the year in the principal metal markets to the total production from mines and smelters with no reduction for fuel, electricity and other supplies consumed in the production process.

Some imported ores and concentrates are treated in Canadian non-ferrous smelting and refining works, especially in the production of aluminum, where imported ore only is used, and of cobalt which is derived mainly from African ores. The net shipments of these plants include therefore the net value of the metals recovered from these imported ores and to this extent the net shipments shown in Tables 30 and 31 include products of other than Canadian origin.

Section 6.—World Production of Certain Metallic Minerals and Fuels

Table 32 shows the production of certain metallic minerals and fuels in the different countries of the world for the year 1956. These figures are taken from the *United Nations Statistical Yearbook 1957* which presents production figures for 1937-56 for a much more extensive list of mining and quarrying industries. The 1956 figures are provisional and have been converted from kilograms to ounces troy for gold, from metric tons to ounces troy for silver, and from metric tons to short tons for the other metals and fuels shown.

32.—World Production of Certain Metallic Minerals and Fuels, 1956

NOTE.—Where dashes occur throughout this table they indicate that no figures were given in the *United Nations Statistical Yearbook* either because there was no production or because the quantity was not available.
